

Technijian for CardLogix

Two conversations worth having — for your shop, and for your law-enforcement customers.

Meeting briefing | Ravi Jain ↔ Nick Schooler | Thu 2026-05-29 | 1:00 PM PT | Teams

18 Technology Dr. Ste 141, Irvine CA 92618 · technijian.com · 949.379.8499

AGENDA

Two conversations worth having today

We've been five minutes apart for 25 years. Let's use the time well — your shop, and your law-enforcement deals.

TRACK A · YOUR SHOP

Co-Managed IT for CardLogix

Your 5–6 workstations and 2 servers. Nick keeps strategic control. Technijian absorbs the toil — 24/7 monitoring, patching, after-hours coverage, M365 hardening, second pair of eyes on incidents.

The Co-Managed model is purpose-built for owner-operator IT shops that have outgrown the solo run — the help desk runs around you, not in place of you.

Goal of this conversation: scope a free 30-minute IT assessment.

Nick decides this one.

TRACK B · LE CUSTOMERS

CJIS / MFA Partnership

You make the credentials — Credentsys PIV, FIDO2, FRAC. Law-enforcement agencies need somebody to wrap CJIS-grade managed-IT and MSSP around the hardware so the credential lands in a CJIS-ready home.

That's the seam where Technijian fits as a channel partner — you don't lose deals to HID's tighter ecosystem because the full story now has a managed-services half.

Goal of this conversation: agree whether the concept is worth a deeper look.

Goulet + Hope approve this one.

WHY US, WHY NOW

Same business park. 25-year Irvine peer.

We've been here as long as you have. The local managed-IT partner that doesn't outsource your help desk to a continent away.

1998

CARDLOGIX FOUNDED

2000

TECHNIJIAN FOUNDED

0.2 mi

DISTANCE BETWEEN OFFICES

92618

SAME IRVINE ZIP

WHAT THAT MEANS FOR THIS CONVERSATION

Local. On-site response in minutes, not hours. No offshore handoff, no time-zone gap on an incident.

Peer-vintage. Same Irvine-tech generation. We grew up with the same vendors, the same compliance pressure curves, the same customer expectations.

Surprise factor: low. We know your space. CardLogix is a known commodity in identity — we don't need a discovery call to figure out what an HSPD-12 deployment looks like.

For your 5–6 workstations and 2 servers

You keep strategic control. We absorb the toil. The Co-Managed model is purpose-built for owner-operator shops that have outgrown the solo run.

PILLAR 01

Help desk & monitoring

24/7 NOC + U.S.-based help desk. After-hours and weekend on-call escalation. ITIL ticketing with SLA reporting.

PILLAR 02

Desktops & servers

Endpoint management, automated patching, hardware lifecycle, backup verification, M365 admin, performance tuning.

PILLAR 03

Network & security

Firewall policy, VPN / SD-WAN, Wi-Fi optimization, segmentation, switch lifecycle, multi-site failover.

PILLAR 04

Strategic leadership

vCIO reporting, technology roadmapping, IT budget modeling, vendor management, compliance posture reviews.

THE TECHNIJIAN STACK

Five services that compose into a managed-IT + MSSP + compliance program

Each works standalone. Together they're the wrap CardLogix needs for its CJIS-grade deals.

MANAGED & CO-MANAGED

My IT

24/7 monitoring + help desk + vCIO. Endpoint, network, server lifecycle. Fixed-scope projects when you need them.

24/7 MDR

My Security

15-min critical SLA. EDR + SIEM + email security + MFA-everywhere + conditional access. IR + forensics + Fractional CISO.

8 FRAMEWORKS TODAY

My Compliance

HIPAA, SOC 2, PCI-DSS, CMMC, GDPR, NIST CSF, CIS, ISO 27001. vCCO / vCISO. Audit-prep sherpa. Evidence collection.

OUR CROSS-VENDOR SIEM

My Jian

Technijian-built and operated. Ingests across firewall + EDR + email + DNS + backup + M365. MITRE-tagged. Continuous compliance.

CUSTOM & ADVISORY

My Dev / My AI

Custom builds, AI Document Intelligence, knowledge graphs, agent workflows. Fractional AI Advisor on retainer.

DIFFERENTIATOR

My Jian — our own cross-vendor SIEM & compliance platform

Built and operated by Technijian. Same platform we sell to clients runs against our own environment.

WHAT IT INGESTS

Sophos firewall
syslog

INKY email
security

CrowdStrike EDR

Huntress EDR /
MDR

Meraki dashboard
+ syslog

Veeam / NAKIVO
backup

Cisco Umbrella
DNS

vCenter / vSphere

Cloudflare edge

M365 × 22
workloads

WHAT IT PRODUCES

31

Continuous compliance evaluators
(HIPAA, SOC 2, PCI, Technijian
baseline)

Real-time

Cross-vendor SIEM correlation
+ 7-day retrospective sweep

MITRE

ATT&CK tagging on every event
for every detection

1×/mo

Branded compliance DOCX report
per environment

Append-only

Audit log — tamper-evident
chain of custody

If a prospect asks "show me you're compliant," Jian is what generates the answer — every month, automatically.

TRACK B · PARTNERSHIP CONCEPT

CardLogix hardware + Technijian managed-IT wrap, sold into CJIS

A channel-style partnership where your existing PIV / FIDO2 / FRAC product portfolio drops into a CJIS-ready managed environment we operate at the agency.

HARDWARE & CREDENTIALS

What CardLogix brings

- Credentysys PIV (EAL 5+, FIPS 201)
- FIDO2 smart cards (CJIS / AAL2/3)
- First Responder credentials (FRAC, PIV-I)
- BIOSID biometric handhelds (IP67)
- Issuance, verification, validation software
- 28-year US-based manufacturing credibility

MANAGED WRAP

What Technijian brings

- Entra ID / AD integration for the agency
- Card lifecycle (issue, rotate, revoke) workflows
- 24/7 MDR + 15-minute critical SLA
- 8-framework compliance program + CJIS (Phase 1)
- My Jian SIEM for continuous evidence
- Audit-evidence pack a state CSO can use

END-TO-END STORY

What the joint customer gets

- One signed CJIS Security Addendum, not two
- Phishing-resistant MFA satisfied day one
- 12 other CJIS policy areas covered by the wrap
- Continuous evidence — not annual scramble
- A single accountable team across hardware + ops
- The full deal that HID, Identiv currently win

CJIS phishing-resistant MFA has been mandatory since October 1, 2024

And the policy keeps tightening. Two questions: what the market needs, and what Technijian can honestly say it has.

THE MARKET TIMING

JUL 2024

CJIS Security Policy 5.9.5

MFA explicitly mandated for every account that touches CJI. Phishing-resistant factors required.

OCT 1, 2024

Compliance deadline

Hard deadline for all entities accessing CJI to have MFA in place. No grace period.

DEC 2024

CJIS Security Policy 6.0

Tightens password + MFA further. Aligns explicitly to NIST 800-53 Rev 5. SMS-MFA is out.

2026

Where the market is

Agencies are mid-cycle on PIV / FIDO2 rollouts. The hardware side moves; the managed-IT wrap lags.

THE HONEST GAP

What Technijian has — and what's next.

What we have today.

Eight compliance frameworks running in production — HIPAA, SOC 2, PCI-DSS, CMMC, GDPR, NIST CSF, CIS, ISO 27001. The same NIST 800-53 control families CJIS 6.0 explicitly aligns to. The Lego pieces — Entra ID, Defender, conditional access, Teramind, Passportal, My Jian — are all in place.

What we have NOT done.

We have not delivered a CJIS engagement before. We will not claim otherwise. CJIS is not the ninth framework in our brochure today — it would be the ninth we'd stand up.

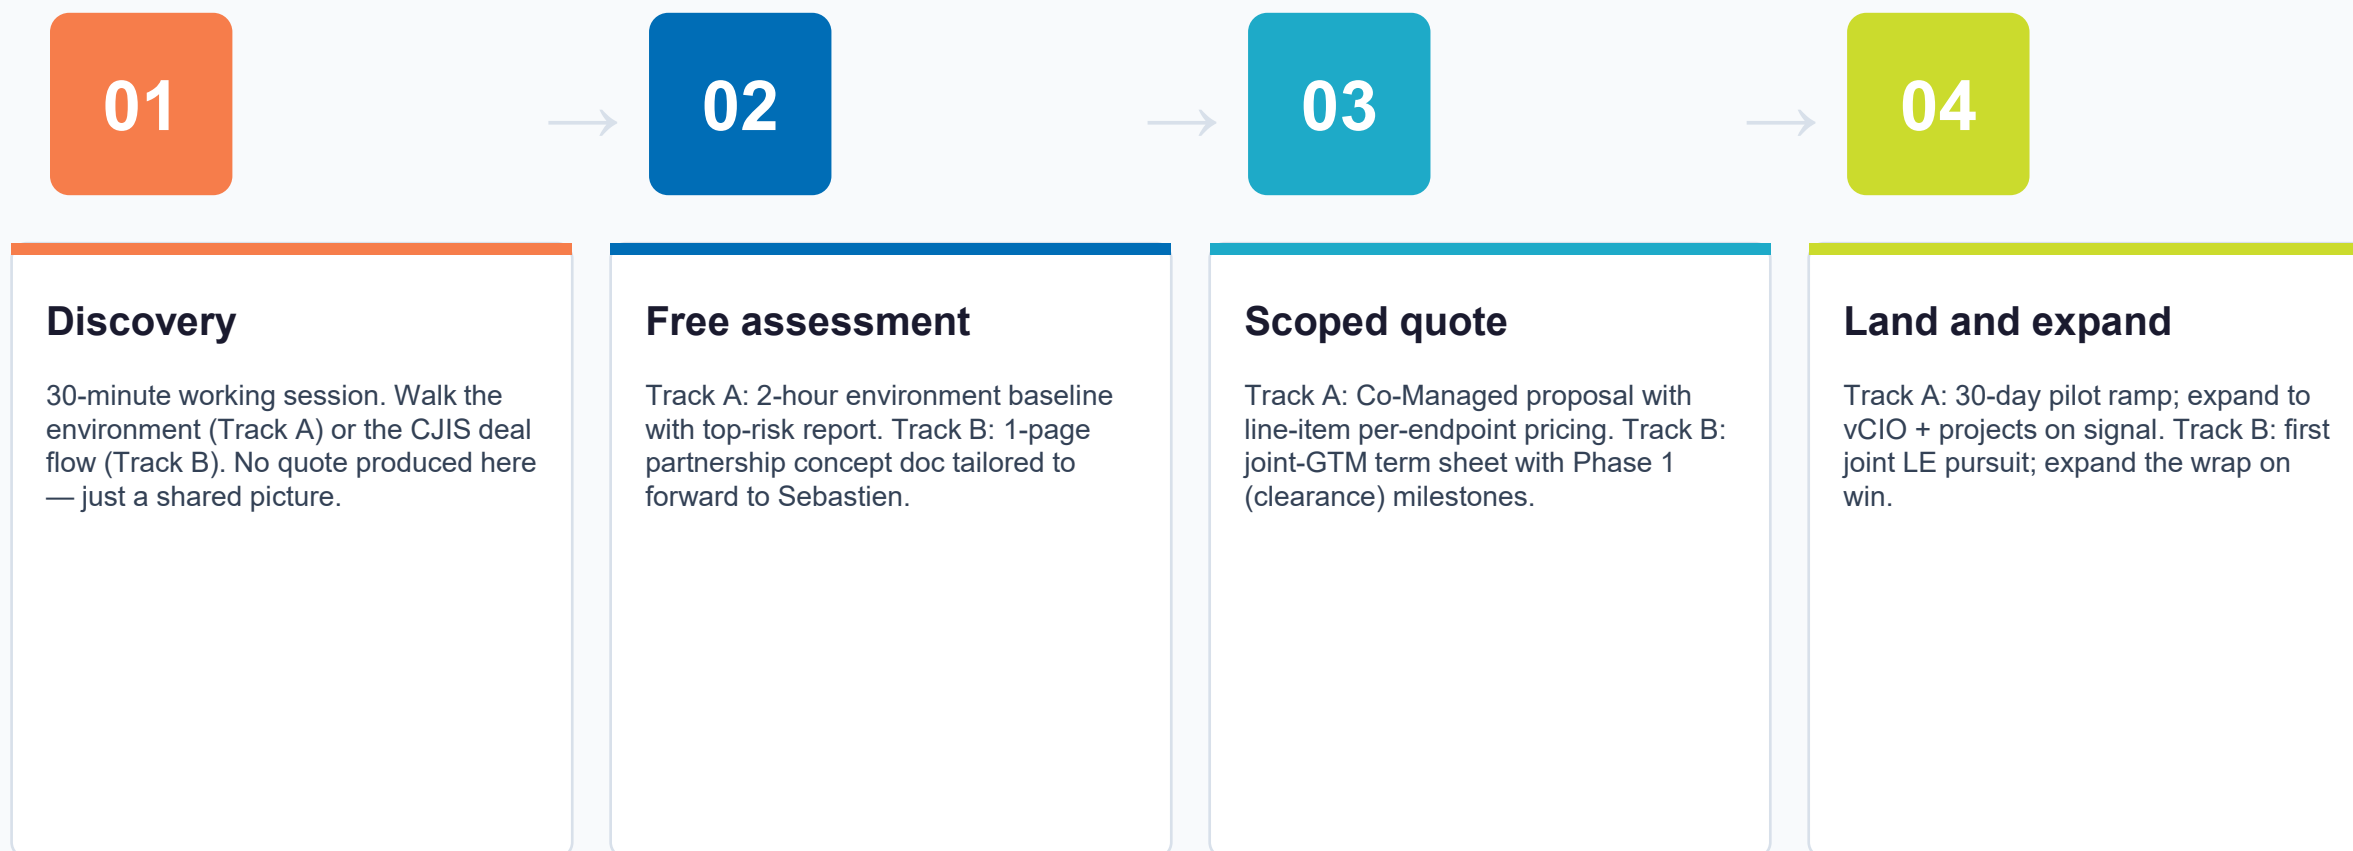

The path, if Track B becomes real.

~90 days to credentialed. Bottleneck = FBI fingerprint clearance for 4–8 engineers (6–12 weeks each). In parallel: CJIS Security Addendum legal review, SOPs layered on our CMMC base, FIPS-validation evidence packs, California CSA introduction.

HOW WE'D ENGAGE

Discovery first. No pricing in the meeting. Land small, expand on signal.

Both tracks follow the same low-commitment path — a small first step that earns the right to a bigger one.

NEXT STEPS

Two next steps. **No commitment.**

TRACK A

Free 30-min IT assessment

We walk your environment for an hour or two, baseline what's there, surface top risks, and come back with a scoped Co-Managed option for your shop. No commitment past the assessment.

TRACK B

Partnership concept brief

We put a 1–2 page CJIS partnership concept on paper — thesis, joint-GTM motion, the 90-day clearance path, what each side needs from the other. You forward it to Sebastien if it resonates.
