\$2.77B

2024 BEC losses (FBI IC3)

\$3.31M

Avg. breach, orgs <500 staff (IBM)

ROG Services Inc. — Resource Oversight & Guidance Services — is a California nonprofit that serves as a Social Security and VA representative payee, managing benefits for adults who cannot manage their own funds. You reached out to Technijian about IT. This summary makes the case on two fronts and hands the specifics back to you — it states only verified public facts and defers every organization-specific number to discovery.

Protect & run IT well. You hold SSNs, bank details, and health information, and you disburse benefit funds — including loading prepaid cards — for vulnerable people across seven offices. That mix of sensitive data and money movement raises the bar, and SSA expressly asks payees to keep documented procedures protecting personal information. **Integrate AI.** The annual SSA/VA accountings, ledger reconciliation, and intake your staff repeat are where AI assists — never near a public tool, and never deciding on its own.

What we verified

- **Who you are:** a 501(c)(3) since 2010 (EIN 27-1997250), organizational SSA & VA representative payee, seven offices across California and Montana, Charity Navigator Four-Star, reporting “over 2,100 active clients.”

- **What you do:** receive and disburse benefits into a bonded trust account, load customized allowances onto prepaid Visa® debit cards, pay clients' bills, and keep per-beneficiary records — a money-movement operation holding highly sensitive data.
- **What you must run:** annual SSA (SSA-623) and VA (21P-4706b) accountings, two-year record retention, per-beneficiary ledgers, and records producible for SSA and VA reviews.

What we did NOT assume

Your public site discloses no IT details, so we have guessed none — not who supports your IT, Microsoft 365 vs Google, endpoint counts, security tooling, or backup design. Those are open questions in the full brief, answered by your team or a free Nexus Assess.

Why it matters now

Driver	Why it raises the bar
You move money	Business email compromise — redirecting payments, often onto prepaid cards — was the #2 cybercrime by dollar loss in 2024 (\$2.77B, FBI IC3). It targets the exact workflow a payee runs.
SSA safeguarding duty	SSA asks payees to keep documented procedures protecting beneficiary PII and to apply role-based access — a real expectation, not our opinion.
A targeted population	Americans 60+ reported \$4.89B in losses to the FBI in 2024; GAO calls organizational-payee beneficiaries “among the most vulnerable.”
Honest open questions	Whether HIPAA, GLBA, or the CCPA reach a payee nonprofit are genuine legal questions — we flag them for your counsel rather than asserting them.

What a partnership looks like — and what it costs

Managed or co-managed — your call. If no one really owns IT today, we run it; if you have an internal person or outside shop, we augment them. Either way you keep control and gain a named, security-first Technijian pod plus the 24/7 monitoring, email- and payment-fraud defense, backup, and audit-evidence support a small multi-site team cannot sustain alone. On the AI side, we apply assistive automation to the work you already repeat — kept in private, governed deployments.

Nonprofit-first, no invented numbers. We lead with the programs that lower your cost — Microsoft 365 nonprofit (the Business Premium security tier at about \$5.50/user/mo), TechSoup, and other 501(c)(3) offers — then apply market-typical ranges only for context, never as a quote. Your real figure is scoped after a free assessment.

The next step — yours to keep

Book a free Nexus Assess: an internal and external vulnerability scan, a dark-web credential check, and a Microsoft 365 / Google Workspace security review, returned as a prioritized roadmap mapped to your SSA/VA safeguarding duties within about ten business days — yours to keep, no contract, no obligation. It answers most of the open questions with hard data and turns this summary into a costed plan.

Want the detail?

The full brief expands every point above and ends with a structured questionnaire — “Questions to Complete the Analysis” — covering your environment, security, fiduciary records, operations, and roadmap. Answer those, or let the assessment measure them.
