

CLOUD INFRASTRUCTURE & MIGRATION SERVICES

My Cloud

Your Cloud. Your Terms.

Private cloud, public cloud, and hybrid architectures — engineered, migrated, and operated by a partner that runs its own datacenter.

CLOUD OPS

The Cloud Challenge

Cloud is powerful — and complicated. Bills creep, consoles multiply, migrations stall, and compliance in the cloud is never automatic. Most organizations need an operator, not another vendor.

Cloud Cost Sprawl

AWS and Azure bills balloon unexpectedly. Idle resources, oversized instances, and forgotten environments pile up — and nobody owns cost optimization.

→ [FinOps rightsizing with accountable savings](#)

Multi-Cloud Complexity

Different consoles, different billing, different IAM and security models. Unified governance across AWS, Azure, and private cloud rarely happens by accident.

→ [Single pane of glass & unified policy](#)

Migration Paralysis

Legacy on-prem systems feel too risky to move, but aging hardware, refresh cycles, and support costs keep climbing every year you wait.

→ [De-risked, phased migration plans](#)

Compliance in the Cloud

HIPAA-eligible services, data residency, tenant isolation, and audit evidence — cloud compliance is not a checkbox, it's an architecture.

→ [Compliance baked into reference architectures](#)

Why My Cloud Now?

- ▶ Hardware refresh cycles are punishing CapEx budgets — predictable OpEx models unlock cash for growth investments
- ▶ The infrastructure labor shortage makes in-house operations harder and more expensive every quarter
- ▶ Cloud pricing optimization requires specialists — rightsizing, RIs, Savings Plans, and commitments leave most orgs overspending 30-40%
- ▶ HIPAA, SOC 2, PCI, and GDPR now assume modern cloud controls — legacy datacenters struggle to satisfy current frameworks

Cloud Services

One partner for the full cloud portfolio — our own private cloud, hyperscaler expertise in AWS and Azure, and hybrid architectures that bridge them cleanly.

My Private Cloud

Technijian-hosted infrastructure colocated in a SOC 2-audited (TPX) datacenter with U.S. data residency.

- ✓ Hosted VMs on VMware vSphere
- ✓ VDI & hosted desktop environments
- ✓ Enterprise app & database hosting
- ✓ Backup, DR & business continuity
- ✓ Predictable OpEx pricing model
- ✓ Orange County-based support

Public Cloud (AWS + Azure)

Migration, architecture, and managed operations across the major hyperscalers.

- ✓ Cloud migration & re-platforming
- ✓ Well-Architected reviews & remediation
- ✓ FinOps & cost optimization programs
- ✓ Landing zones & account structures
- ✓ Managed services & operations
- ✓ Reserved Instances & Savings Plans

Hybrid & Multi-Cloud

Integrate on-prem, private cloud, and public cloud under one unified operating model.

- ✓ Cloud-agnostic architecture design
- ✓ Secure network interconnect (VPN, ExpressRoute)
- ✓ Identity federation & unified IAM
- ✓ Unified monitoring & alerting
- ✓ Microsoft 365 + private cloud integration
- ✓ Workload placement advisory

Cloud Security & Compliance

HIPAA-eligible, audit-ready architectures with security built in from day one.

- ✓ HIPAA BAA-covered architectures
- ✓ Encryption at rest & in transit
- ✓ IAM, RBAC & privileged access
- ✓ Network segmentation & zero-trust
- ✓ Audit logging & evidence collection
- ✓ SOC 2, PCI-DSS, GDPR controls

How We Engage

1

Assess

Workload inventory & TCO modeling

2

Architect

Design target state & landing zones

3

Migrate

Lift-shift or re-platform in waves

4

Operate

24/7 managed cloud operations

Cloud Use Cases

Representative workloads and scenarios where My Cloud delivers outsized value — drawn from patterns we architect, migrate, and operate for mid-market and regulated organizations.

PRIVATE CLOUD

Legacy Datacenter Migration

Aging on-prem infrastructure — file servers, line-of-business apps, VDI — retired and migrated to My Private Cloud. Predictable monthly OpEx replaces refresh-cycle CapEx, with U.S. data residency and 24/7 support.

CapEx→OpEx
Financial shift

99.99%
Target SLA

FINOPS

AWS Cost Optimization

Existing AWS footprint analyzed for rightsizing, idle resources, and commitment coverage. Reserved Instances, Savings Plans, storage tiering, and architecture fixes applied under a continuous FinOps operating model.

30-40%
Spend reduction

Monthly
FinOps cadence

REGULATED

HIPAA-Eligible Azure Migration

Healthcare workload moved to Microsoft Azure under a Business Associate Agreement. Encryption, private endpoints, audit logging, and least-privilege IAM deployed to satisfy HIPAA controls and downstream auditors.

Covered

Audit-Ready
Evidence

HYBRID

Hybrid M365 + Private Cloud

Office productivity, email, and collaboration remain in Microsoft 365; regulated workloads, line-of-business apps, and sensitive data stay in My Private Cloud. Single identity, unified security, right workload in the right place.

Unified
Identity & SSO

RESILIENCE

Disaster Recovery Target

Secondary site provisioned in AWS or Azure as a ransomware-resilient DR target, with immutable backups via Veeam, tested failover runbooks, and recovery time objectives aligned to business criticality.

Engagement Models

Whether you need a one-time assessment, a full migration, ongoing managed operations, or fractional cloud leadership — pick the model that matches where you are today.

Cloud Readiness Assessment

Fixed-fee workload inventory, TCO analysis, and migration roadmap delivered in weeks.

- ✓ Application & workload discovery
- ✓ Cloud vs. private cloud TCO modeling
- ✓ Risk & compliance gap analysis
- ✓ Prioritized migration roadmap

Best for: First step before any cloud decision

Cloud Migration Project

Fixed-scope migration engagements with defined waves, milestones, and cutover plans.

- ✓ Landing zones & target architecture
- ✓ Lift-shift or re-platform execution
- ✓ Data migration & cutover coordination
- ✓ Hypercare & operational handoff

Best for: Defined migration with clear goals

Managed Cloud

Monthly managed services covering monitoring, patching, backup, security, and support.

- ✓ 24/7 monitoring & incident response
- ✓ Patching, backup & DR operations
- ✓ Security & compliance posture mgmt
- ✓ Monthly FinOps & optimization

Best for: Ongoing cloud operations at scale

Fractional Cloud Architect

Retained senior architect acting as your part-time cloud leader and advisor.

- ✓ Architecture reviews & design sessions
- ✓ Vendor evaluation & negotiation
- ✓ Roadmap & investment planning
- ✓ Team enablement & mentoring

Best for: Leadership without a full-time hire

About Technijian

Technijian operates its own private cloud (My Private Cloud) alongside deep expertise in AWS and Azure. 25+ years of hosting and managed services experience, Orange County-based, SOC 2 compliant datacenter with U.S. data residency. We are cloud-agnostic advisors who recommend the right platform for each workload — not a default vendor. Private cloud, public cloud, hybrid cloud: we build it, migrate it, and operate it end-to-end.

Private Cloud. Public Cloud. Hybrid Cloud.
