RECOVERY TEAM

The Continuity Challenge

Most organizations think they have a backup strategy — until ransomware hits, a datacenter goes dark, or an auditor asks to see the restore test evidence. Then the gaps get expensive.

Ransomware Can't Be Negotiated

Modern ransomware targets your backups first. Without immutable storage and air-gapped copies, you are paying the ransom — and hoping the decryption key works.

→ [Immutable, air-gapped Veeam backups](#)

Untested Backups = No Backups

If you have never restored a full workload end-to-end, you do not have a recovery strategy — you have wishful thinking and a false sense of security.

→ [Quarterly restore tests with evidence](#)

RPO/RTO Mismatch to Business

Your backup frequency does not match what the business can tolerate losing; your restore speed does not match what the business can tolerate waiting through.

→ [RPO/RTO-tied backup & DR architecture](#)

Compliance Evidence Gaps

HIPAA, PCI, and SOC 2 auditors ask for backup retention, restore test evidence, and offsite copies. Most organizations cannot produce these documents on demand.

→ [Audit-ready evidence binders](#)

Why My Continuity Now?

- ▶ Ransomware targeting of backup infrastructure has doubled year-over-year — attackers encrypt your backups before they encrypt production
- ▶ Cyber insurance carriers now require immutable backups, documented restore testing, and offsite copies as conditions of coverage and renewal
- ▶ HIPAA, SOC 2, and PCI require documented recovery procedures, retention policies, and evidence of testing — not just backup software licenses
- ▶ Hardware failure, human error, and accidental deletion still account for the majority of data loss incidents — resilience is not optional

Continuity Service Pillars

A complete BCDR practice — Veeam-based backup, orchestrated disaster recovery, business continuity planning, and audit-ready restore testing — operated as one service.

Backup (Veeam)

- ✓ Veeam Backup & Replication for Windows, Linux, VMs
- ✓ Microsoft 365 backup (mailbox, OneDrive, SharePoint, Teams)
- ✓ Physical server & workload-level backup
- ✓ Encrypted at rest and in transit
- ✓ Immutable & air-gapped copies (3-2-1-1-0 rule)
- ✓ Instant VM recovery & granular file restore

Disaster Recovery (DR)

- ✓ DR target in My Private Cloud, AWS, or Azure
- ✓ RTO/RPO-tied architecture & workload tiering
- ✓ Orchestrated failover with runbook automation
- ✓ DR test environments & sandbox restores
- ✓ Cross-cloud replication (AWS ↔ Azure ↔ DC)
- ✓ Failback procedures & validation playbooks

Business Continuity Planning

- ✓ BCP document development & maintenance
- ✓ Tabletop exercises & scenario walkthroughs
- ✓ Alternate worksite & remote-work planning
- ✓ Vendor & supplier dependency mapping
- ✓ Crisis communication plans & call trees
- ✓ Business impact analysis (BIA) workshops

Recovery Testing & Evidence

- ✓ Quarterly or annual full-restore tests
- ✓ Documented test reports & sign-off records
- ✓ Evidence binders for SOC 2, HIPAA, PCI audits
- ✓ Cyber insurance documentation packages
- ✓ Retention & recovery policy documentation
- ✓ Continuous backup health monitoring

How We Engage

1

Assess

Current state, RPO/RTO gap analysis

2

Design

Target state & Veeam architecture

3

Implement

Backups, DR, BCP documentation

4

Test & Operate

Restore tests & audit evidence

Representative Use Cases

Industry-anonymized profiles showing how My Continuity maps to real backup, DR, and resilience challenges across regulated and high-availability environments.

RANSOMWARE RESILIENCE

Ransomware-Resilient Backup Architecture

Immutable Veeam backups with air-gapped copies in Technijian's datacenter — attackers cannot encrypt, delete, or modify the backup chain even with domain admin credentials.

Immutable
Storage

3-2-1-1-0
Backup rule

CROSS-CLOUD DR

Multi-Cloud Disaster Recovery

Production workloads running in AWS with DR target in Azure (or vice versa) — orchestrated failover, cross-cloud replication, and independent control planes for blast-radius isolation.

15-Min
RTO target

Cross-Cloud
Failover

HIPAA COMPLIANCE

HIPAA-Ready Backup Evidence Package

Healthcare environment with audit-ready backup reports, documented restore test logs, retention policies, and offsite copy evidence — everything the auditor asks for, ready on demand.

Audit
Ready

Quarterly
Restore tests

INCIDENT RECOVERY

Post-Ransomware Recovery & Hardening

Emergency recovery after a ransomware incident — restore from clean backup copies, rebuild compromised infrastructure, then redesign backup architecture for future resilience.

Redesign

M365 PROTECTION

Microsoft 365 Backup & Retention

Veeam for Microsoft 365 — mailbox, OneDrive, SharePoint, and Teams backed up with long-term retention beyond Microsoft's default policies, with granular restore to any point in time.

Engagement Models

Flexible arrangements designed to meet you where you are — from one-time readiness assessments to fully managed backup and restore-testing-as-a-service.

BCDR Readiness Assessment

Fixed-fee assessment of your current backup, DR, and BCP posture with a gap analysis and prioritized roadmap.

- ✓ Current state discovery & inventory
- ✓ RPO/RTO gap analysis vs. business need
- ✓ Compliance & evidence readiness review
- ✓ Prioritized remediation roadmap

Best for: Starting point, budgeting, or pre-audit

Backup & DR Implementation

Fixed-scope project to design, deploy, and operationalize Veeam-based backup and disaster recovery.

- ✓ Veeam architecture design & deployment
- ✓ Immutable repository & DR target setup
- ✓ Runbook development & orchestration
- ✓ Initial restore test & operational handoff

Best for: Greenfield or major replatform projects

Managed Backup

Monthly managed service — Technijian operates your Veeam backup platform end-to-end on your behalf.

- ✓ 24/7 backup monitoring & alerting
- ✓ Failed-job remediation & ticketing
- ✓ Capacity, retention & licensing management
- ✓ Monthly backup health reports

Best for: Ongoing operational ownership

Restore-Testing-as-a-Service

Annual or quarterly restore testing with documented evidence packaged for auditors and cyber insurance.

- ✓ Scheduled full-workload restore drills
- ✓ Sandbox test environment provisioning
- ✓ Documented test reports & sign-offs
- ✓ Evidence binders for SOC 2, HIPAA, PCI

Best for: Compliance evidence & insurance proof

Industries We Serve

**Healthcare
& HIPAA**

**Financial Services
& FINRA**

**Legal &
Professional Svc**

**Manufacturing
& Distribution**

**Technology
& SaaS**

**Real Estate &
Property Mgmt**

**Non-Profit
& Education**

**Retail &
eCommerce**

Would You Survive Ransomware?

Schedule a BCDR Readiness Assessment or a restore test — find the gaps before an attacker, an auditor, or a disaster finds them for you.

About Technijian

Technijian has been implementing backup and disaster recovery since 2000. We operate Veeam as our primary backup platform and run DR workloads in our private cloud (My Private Cloud) — our equipment colocated in a SOC 2-audited (TPX) datacenter — and in the public clouds. Our deep compliance expertise across HIPAA, PCI, SOC 2, and GDPR ensures your backup architecture not only recovers the business — it satisfies auditors, cyber insurance carriers, and the regulators watching every one of them.

Backup. DR. BCP. Veeam-Powered.
