WHY FILE STORAGE IS BROKEN FOR GROWING TEAMS

Most businesses piece together file storage from consumer-grade tools or overpay for bloated enterprise platforms that charge per gigabyte, per user, and per feature. The result: unpredictable costs, compliance risk, and data scattered across platforms your team doesn't control.

Unpredictable Overage Bills

Box, Dropbox, and OneDrive charge per GB above your plan tier. A single large project can spike your bill by hundreds of dollars mid-month — with no warning.

Per-Seat Feature Tax

Box, Dropbox, and OneDrive charge premium tiers for basic features: E2E encryption, audit logs, SAML SSO, advanced sharing controls. Getting everything an enterprise needs often means the \$30+/user Enterprise plan.

Weak Tenant Isolation

Shared consumer-grade infrastructure means noisy-neighbor effects, shared policy defaults, and cross-customer incident blast radius. Audit logs may not cover admin actions across tenants.

Vendor Lock-In

Proprietary platforms make migration painful. Your files, permissions, share links, and workflows are all tangled in a closed system you can never fully audit or own.

Compliance Blind Spots

HIPAA, GDPR, and SOC 2 require audit trails, data residency control, and encryption configuration that most consumer cloud platforms don't provide out of the box.

Poor Mobile & Offline Experience

Field teams, remote workers, and executives need seamless offline access. Most platforms throttle mobile sync or require premium add-ons for offline file access on all devices.

My Disk

Solves all six — Technijian-managed Nextcloud platform with per-unit pricing (\$5/user + \$50/TB), every feature included, US-based infrastructure, open-source core — no per-seat feature tax.

A TECHNIJIAN-MANAGED CLOUD FILE PLATFORM — BUILT ON NEXTCLOUD

Technijian My Disk is a **Technijian-managed Nextcloud platform** running on our secure US-based infrastructure. Every customer gets an isolated workspace with per-tenant admin controls, encryption keys, and audit logs. Your data is encrypted, backed up daily, and monitored 24/7 by Technijian's team. Dedicated single-tenant deployment is available as an Enterprise option.

POWERED BY NEXTCLOUD

Nextcloud is the world's leading open-source content collaboration platform, trusted by 400,000+ deployments including governments, hospitals, and Fortune 500 companies. It has a publicly auditable codebase — no black boxes.

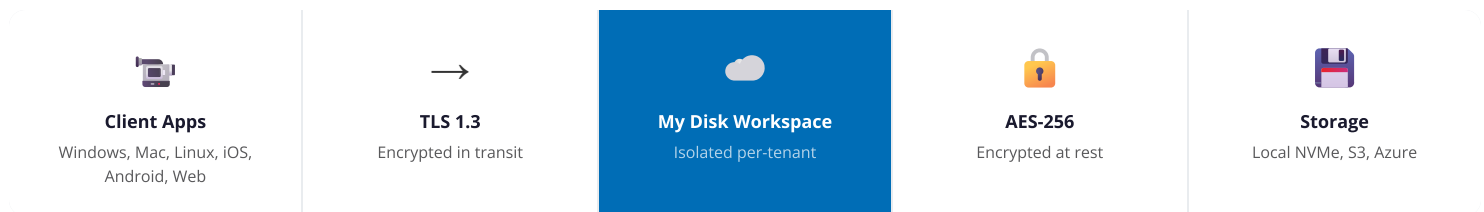

- ✓ 20M+ active users worldwide
- ✓ Full GDPR & HIPAA compliance support
- ✓ Regular third-party security audits
- ✓ 300+ integrations & apps
- ✓ Active open-source development community

WHAT TECHNIJIAN ADDS

Raw Nextcloud requires Linux expertise, security hardening, backup setup, and ongoing maintenance. Technijian handles all of it — so your team gets enterprise cloud storage without the IT overhead.

- ✓ Provisioning & configuration in <24 hours
- ✓ SSL certificates & custom domain (mydisk.yourco.com)
- ✓ Daily encrypted backups with 30-day retention
- ✓ Security patching & version upgrades
- ✓ White-glove data migration from existing platform

ARCHITECTURE OVERVIEW

NEXTCLOUD BY THE NUMBERS

Trusted by Governments & Hospitals Worldwide

Nextcloud powers file storage for the German Federal Administration, French Ministry of Interior, CERN, Deutsche Bahn, and thousands of healthcare systems across Europe and North America — because it's auditable, self-hostable, and built for compliance-heavy environments.

EVERYTHING YOUR TEAM NEEDS TO STORE, SYNC, AND SHARE

File Storage & Organization

Organize files and folders with familiar drag-and-drop interfaces. Support for unlimited file sizes, bulk uploads, and versioned storage. Full-text search across all your content.

ENTERPRISE SECURITY BUILT IN — NOT BOLTED ON

My Disk ships with a comprehensive security stack configured out of the box. No extra add-ons required. Every layer is auditable, configurable, and HIPAA/GDPR-ready from day one.

Encryption at Rest

AES-256 server-side encryption on all stored files. Optional client-side (E2EE) encryption for maximum privacy — only your device holds the keys. Files are encrypted before they leave your machine.

Encryption in Transit

All connections use TLS 1.3 with modern cipher suites. HSTS enforced. Perfect forward secrecy enabled. SSL certificates auto-renewed via Let's Encrypt or your own CA.

Two-Factor & SSO

TOTP authenticator app, FIDO2/WebAuthn hardware keys, and enterprise SAML/OIDC SSO. Enforce 2FA by user group or across the entire instance via admin policy.

Audit Logs & Activity

Every file access, download, share, login, and admin action is logged with timestamp, user, and IP address. Export logs to SIEM. Retained 90 days by default, configurable.

File Versioning & Recovery

30-day file version history with per-file restore. Recycle bin with configurable retention. Daily encrypted backups with point-in-time recovery by Technijian.

Brute Force Protection

Automatic IP throttling after failed login attempts. Account lockout policies, suspicious login notifications, and geographic access restrictions per user or group.

COMPLIANCE FRAMEWORKS

HIPAA

BAA available. Audit logs, E2EE, access controls pre-configured.

GDPR

Data residency control, right-to-erasure API, DPA template.

SOC 2

Technijian infrastructure meets SOC 2 Type II controls.

CCPA

User data deletion workflows, consent management hooks.

REMOTE & HYBRID WORK READY

Work from Anywhere

Web access from any browser, no VPN required

Mobile-First Field Teams

iOS/Android with offline access & camera upload

Background Sync

Files stay current automatically — no manual uploads

Guest Sharing

External partners access shared folders, no account needed

WHAT CUSTOMERS REPLACE WITH MY DISK

EMAIL ATTACHMENTS

Replace 50MB attachment caps and lost-in-thread files with one share link per folder.

USB DRIVES

Kill lost USB drives, BYO-flashdrive chaos, and unencrypted portable media.

LEGACY FILE SERVERS

Retire on-prem Windows/SMB shares that can't be accessed remotely without VPN.

CONSUMER DROPBOX

Get staff off personal free accounts with zero audit logs or admin control.

FTP / SFTP

Retire clunky FTP clients for client file exchange — replace with branded share links.

One platform for every file workflow
