

Chat.AI Tenant Onboarding

A short, one-time setup that connects your organization's Microsoft Entra ID (Azure AD) to Chat.AI, so your team can sign in securely with their existing Microsoft 365 accounts.

Chat.AI signs your people in with the Microsoft accounts they already use — no new passwords to manage. To make that connection, a **Global Administrator** in your Microsoft tenant registers a small application, creates one secret, grants a short list of permissions, and sends three values to Technijian. The whole process takes about **15–20 minutes**, and you only do it once.

I BEFORE YOU BEGIN

You'll need:

- ✓ An account with the **Global Administrator** role in **Microsoft Entra ID** (formerly Azure Active Directory) — this lets you both register the app and grant admin consent in Step 9.
- ✓ Access to the **Azure portal** at `portal.azure.com`.
- ✓ A secure place to temporarily note three values (a password manager is ideal).
- ✓ About **15–20 minutes**. This is a one-time setup.

WHAT YOU'LL DO — AT A GLANCE

1

Register an App

Create an app registration in Microsoft Entra ID.

2

Create a Secret

Generate a client secret and copy its value.

3

Grant Permissions

Add the required API permissions & admin consent.

4

Send to Us

Securely share three values with Technijian.

✓ THEN TECHNIJIAN TAKES IT FROM HERE

Once we receive your three values, **Technijian completes the rest** — we provision your Chat.AI tenant, store your credentials securely, enable your AI models, and activate your subscription. We'll email you your sign-in link and confirm when your team can log in. **No further action is needed on your side.**

A REGISTER YOUR APPLICATION & CREATE A SECRET

First, create a dedicated application in your Microsoft tenant and give it one secret. This is the secure handshake that lets Chat.AI verify your users with Microsoft — Chat.AI never sees or stores their passwords.

1

Sign in to the Azure portal

Go to `https://portal.azure.com` and sign in with your **Global Administrator** account.

2

Open Microsoft Entra ID

In the search bar at the top, type **Microsoft Entra ID** and open it. (This was previously called Azure Active Directory.)

3

Create a new App registration

Select **App registrations** → **New registration**. Give it a clear name such as **Technijian Chat.AI**. Under *Supported account types*, choose **Accounts in this organizational directory only (Single tenant)**. You can leave the Redirect URI blank. Click **Register**.

4

Copy and save two IDs

On the app's **Overview** page, copy and save both values — you'll send these to Technijian later:

• **Application (client) ID** • **Directory (tenant) ID**

5

Create a client secret

Go to **Certificates & secrets** → **Client secrets** → **New client secret**. Add a description (e.g. *Chat.AI*), choose an expiry (we recommend **24 months**), then click **Add**.

Important — copy the secret VALUE now. Copy the text in the **Value** column immediately and save it somewhere secure. This is **not** the Secret ID. The Value is shown only once — if you leave the page you cannot retrieve it and will have to create a new one.

You should now have three values saved: the Application (client) ID, the Directory (tenant) ID, and the Client Secret Value. Next you'll grant this app the permissions Chat.AI needs — continue on the next page.

B GRANT THE REQUIRED API PERMISSIONS

6

Open API permissions

In your app registration, select **API permissions** from the left menu, then click **Add a permission**.

7

Add Microsoft Graph permissions

Choose **Microsoft Graph** → **Delegated permissions**, then search for and add each of the four permissions below. Click **Add permissions** when done.

MICROSOFT GRAPH

Delegated permissions

PERMISSION	WHAT IT ALLOWS
offline_access	Keeps users signed in by allowing token refresh.
openid	Signs users in using their Microsoft identity (OpenID Connect).
profile	Reads basic profile details (name, etc.) to personalize the app.
User.Read	Reads the signed-in user's profile.

8

Add the Chat.AI API permissions

Click **Add a permission** again, open the **APIs my organization uses** tab, and search for **TechChatV2 API — App 2**. Choose **Delegated permissions** and add both below.

TECHCHATV2 API — APP 2

Delegated permissions

PERMISSION	WHAT IT ALLOWS
Chat.Read	Read access to your organization's Chat.AI conversations and data.
Chat.Write	Create and send messages within your Chat.AI workspace.

Don't see **TechChatV2 API — App 2** in the list? Contact your Technijian onboarding team — we'll provide the API's Application ID so you can search for it directly.

9

Grant admin consent

Back on the **API permissions** page, click **Grant admin consent for <your organization>** and confirm. All six permissions should then show a green ✓ **Granted** status.

That's everything on your side. Your app registration is now ready. Turn to the last page to send your three values to Technijian — we'll take it from there.

C SEND THREE VALUES TO TECHNIJIAN

Share these **three values** with your Technijian onboarding contact

These are everything we need to finish your setup.

VALUE

WHERE TO FIND IT

1 Application (client) ID	App registration → Overview
2 Directory (tenant) ID	App registration → Overview
3 Client Secret Value	Certificates & secrets (copied at Step 5)

✓ WHAT HAPPENS NEXT — TECHNIJIAN HANDLES THIS

1 We create your tenant
We set up your Chat.AI tenant and register your Directory (tenant) ID.

2 We store your credentials
Your Client ID and secret are stored securely on our side — you don't need to enter them anywhere.

3 We enable your AI models
We assign the AI models included in your plan to your workspace.

4 We activate & notify you
We activate your subscription and email your sign-in link — your team is ready to go.

⚠ KEEPING IT SECURE

- Treat the client secret like a password.** Don't paste it into a plain email or chat — ask your Technijian contact for our secure method to share it (or send the secret separately from the two IDs).
- Secrets expire.** We'll remind you before yours does. To renew, create a new secret (Step 5) and send us the new Value — access continues without interruption.
- You stay in control.** You can revoke Chat.AI's access at any time by deleting the secret or the app registration in Microsoft Entra ID.

Questions during setup?

Your Technijian onboarding team is here to help — reach out and we'll walk through any step with you.
