~1,100

Students, one campus

82%Of K-12 schools hit by a cyber
incident**Jun 16**3CX V20 U9 went Final — brand-
new

Santa Fe Christian Schools is a K-12, Christ-centered college-preparatory school in Solana Beach, founded in 1977 and serving roughly 1,100 students on one campus. The school reached out with a specific, current need: help configuring 3CX V20 Update 9 — the phone system — to work cleanly through a Check Point firewall with a Twilio SIP trunk. This summary shows how Technijian solves that today, and where a partner builds from there — stating only verified facts and deferring every school-specific number to a short discovery call.

Solve today, then run and secure the school. Update 9 reached Final release on June 16, 2026 — about a week before this summary — and getting a brand-new PBX release past an enterprise firewall and a hosted trunk is fiddly the first time and routine for a team that has done it often. From there, co-managed IT keeps your team in charge while we add help-desk overflow, 24/7 monitoring, and project muscle a lean team cannot staff alone. **Integrate AI for time and enrollment.** AI assists staff with parent communications, admissions follow-up, and routine documents — and helps the right families find the school. A person reviews anything a family sees, and student data stays in private, governed tools.

What we verified

- **A credentialed school, a credentialed CTO:** a K-12 Christ-centered college-prep school (founded 1977; WASC / ACSI / CESA; multiple National Blue Ribbon awards), led in technology by an award-winning, ITIL-certified CTO running a lean team.
- **A real, current project:** 3CX V20 Update 9 (Final June 16, 2026) behind a Check Point firewall with a Twilio trunk — a documented, recurring configuration challenge, and an ideal first win.
- **A lean IT function:** one strong technology leader with little visible depth beneath — the textbook case for co-managed support, not full outsourcing.
- **An honest compliance picture:** funding-tied mandates (FERPA, CIPA) may not legally bind a private school, but obligations still arrive through ed-tech apps, tuition payments, and — most firmly — cyber-insurance requirements.

The one idea

Start with the problem on your desk. Solving the 3CX / Check Point / Twilio configuration is a small, concrete proof of how Technijian works — and the natural window into a co-managed partner that runs and secures the school's IT and helps staff do more with the hours they have. Co-managed means we work for your team, not instead of it.

One partner, three jobs

Run the school's IT, secure it and protect student data, and save staff time and help enrollment — each delivered by a specific Technijian service.

Technijian for Santa Fe Christian Schools — One Partner, Three Jobs

Run the school's IT (left); secure it and protect student data (centre); save staff time and help enrollment (right).

* My IT / My Security / My AntiSpam / My Compliance / My AI / My SEO. A person reviews every AI-drafted message; student and family data stays in private, governed tools.

A staged path — and a small first step

We solve the phone-and-firewall project first, run a free Nexus Assess alongside it, then secure and comply, then optimize. We price from real, market-typical ranges with education pricing where eligible — no invented numbers, and the larger program scoped only after the free assessment.

First step	What it is	Commitment
Solve 3CX / Check Point / Twilio	A scoped project	Small, defined
Free Nexus Assess	Security & risk read	None — free
Right-sized co-managed proposal	Only the layers you want	You decide

Productized services such as managed email security carry real published rates (My AntiSpam, \$4.75 / user / mo); everything else is scoped from data after the free assessment. We do not invent prices.

A Staged Roadmap — Solve Today's Problem First, Then Build

Santa Fe Christian Schools x Technijian — stabilize the phones and network, then secure, then optimize.

* Sequence and targets calibrate after a short discovery call and the free assessment. Each phase delivers something useful before the next begins.

Start the conversation

The easiest first step is to let us solve the phone-and-firewall project and book a free Nexus Assess alongside it — no obligation, and we are local in Southern California. The full brief goes deeper and ends with a short questionnaire that turns this summary into a costed, calibrated plan.
