

Technijian

for Santa Fe Christian Schools

Let's solve the phone-and-firewall project — then look at what a partner takes off your plate next.

First meeting | Ravi Jain, Founder & CEO ↔ Rob Honma, Chief Technology Officer | Solana Beach, CA

K-12 Christian school · ~1,100 students · 3CX V20 + Check Point + Twilio · Google Workspace · lean in-house IT

18 Technology Dr. Ste 141, Irvine CA 92618 · technijian.com · 949.379.8499 · technology as a solution

WHY WE'RE HERE

Start with your project — then the bigger picture

You reached out to get 3CX V20 working cleanly through your Check Point firewall with Twilio. Let's solve that first, then see where a partner fits.

OUR PROMISE TODAY

We're not here to take over your network. We're here to clear the 3CX hurdle, and find the two or three places an outside team genuinely takes work off your plate — and to leave you with something useful either way.

You keep control.

We fill the gaps a lean in-house team can't staff around the clock.

1

The project on your desk

3CX V20 Update 9 + Check Point + Twilio — what it takes to get clean.

2

What we heard from you

Your environment, said back — so you can correct anything.

3

Who Technijian is

25+ years, security-first, a dedicated team model — in 20 seconds.

4

Where a partner actually helps

Co-managed: augment your team, don't replace it.

5

Security & student data for a school

What an insurer, a board, and families expect a partner to shoulder.

6

Your questions + a free next step

The heart of the meeting — and a read of your environment to keep.

WHAT WE HEARD

Your environment, said back to you

From your booking note and your public technology pages. If we got anything wrong, now's the time to fix it — this is your meeting.

3CX V20

PHONE SYSTEM · THE PROJECT

Check Point

FIREWALL AT THE EDGE

Twilio

SIP TRUNK / MESSAGING

Google

WORKSPACE · HAPARA · MACS

WHAT THAT TELLS US

You run a real, modern shop. Google Workspace with Hapara, a mixed Mac and Chromebook fleet, a Blackbaud-style portal, and an enterprise Check Point firewall — this is a thoughtfully built environment, led by a CTO who's been recognized for it. You don't need someone to take the wheel; you need depth and coverage on top.

The 3CX cutover is a real, current task. Update 9 went Final about a week ago, and getting a brand-new PBX release clean through Check Point and Twilio is genuinely fiddly the first time — a fair reason to want a second set of hands.

A school carries a higher security floor. Children's data, tuition payments, and a cyber-insurer's checklist set a bar that's a lot for a lean team to hold alone, every hour of every day.

WHO WE ARE

Technijian, in 20 seconds

Enough to know we're a serious, local, security-first partner — then back to you.

SINCE 2000

25+ years, still here

An Irvine-based IT firm founded in 2000, with a Panchkula, India delivery center for true follow-the-sun coverage. We're built for the long relationship, not the quick flip.

THE POD MODEL

A team that knows you

You get a dedicated pod — a named team that learns your environment — not a different stranger on every ticket. It's the single thing clients tell us they were missing before.

SECURITY-FIRST

Built in, not bolted on

CISSP-led, delivering 24/7 managed detection & response — our My Jian SIEM correlating across CrowdStrike / Huntress MDR, with our analysts triaging. Security is how we run everything.

WE'VE DONE THIS

3CX behind enterprise firewalls

We configure VoIP behind enterprise firewalls regularly, and we build practical AI and custom software — so the conversation can go beyond keeping the lights on.

THE PROJECT ON YOUR DESK

3CX V20 · Check Point · Twilio — why the seams fight

Each piece is fine alone. The work is where they meet — and it's the same pattern every time, which is exactly why it goes faster with a team that's done it often.

3CX V20 Update 9

(Final June 16, 2026)

- Needs Full-Cone NAT — not just open ports
- SIP 5060 · RTP 9000–10999 · tunnel 5090
- Firewall Checker validates NAT type
- New Custom SIP-trunk Template Builder

Check Point firewall

(the piece in the middle)

- SIP inspection / ALG ON by default
- Must turn ALG OFF — it mangles SIP
- Then define RTP ports manually
- Stable 1:1 NAT for the PBX

Twilio Elastic SIP

(the trunk)

- Termination + Origination URIs
- Pointed at the 3CX public FQDN
- IP ACL + credentials kept in sync
- Numbers in E.164; codecs matched

THE TELL

Dropped registration, one-way audio, or calls dying at ~30 seconds look like a 3CX or Twilio bug — but they're almost always the firewall in the middle. Our approach: confirm the ground truth, turn off SIP inspection and define the media path deliberately, bring the Twilio trunk up clean, validate with the Firewall Checker and live calls — then leave a runbook so the next update doesn't reopen the ticket.

THE CORE IDEA

Co-managed means we work for you, not instead of you

The old pitch was all-or-nothing: hand us your network and step aside. That's not this. Co-management keeps you in charge and plugs specific gaps.

All-or-nothing outsourcing

(the model you're right to distrust)

- Replace the in-house team
- Tickets go to rotating strangers
- You lose visibility and control
- Your CTO gets sidelined
- One rigid bundle, take it or leave it

Co-managed with Technijian

(augment what you run)

- Your team stays in charge
- A named pod that learns your stack
- We cover the gaps you choose
- Your team is force-multiplied + mentored
- Pick the layers you actually need

1

You keep control

Your team owns the relationship and the roadmap. We never make changes you didn't approve, and you see everything we do.

2

We cover what one team can't

24/7 monitoring, after-hours and break coverage, surge bandwidth for projects, PTO cover — what a lean team simply can't staff alone.

3

Augment, not replace

On your worst week we're the bench you call. On a normal week, you barely notice us — and your team grows alongside ours.

A FEW WAYS WE COULD HELP

Three places a partner usually earns its keep

Not a menu to buy today — hypotheses to react to. Tell us which of these is real for you, and which isn't.

TAKE WORK OFF THE PLATE

Co-Managed IT & Project Hands

The 3CX / firewall job today; then help-desk overflow, after-hours and break coverage, patching and monitoring, and the projects that wait for summer. Your team sets the priorities; we add the hands.

You set the priorities; we add the hands.

COVER WHAT YOU CAN'T WATCH

Security, Student Data & Insurance

24/7 MDR, EDR on every device, email and web safety, MFA and backups — plus the cyber-insurance control stack and student-data reviews of your apps. The coverage and evidence one team can't sustain alone.

Built to the checklist your insurer hands you.

DO MORE WITH THE HOURS YOU HAVE

Practical AI for Staff & Admissions

AI that drafts parent communications, speeds admissions follow-up, and tidies routine documents — a person reviews everything a family sees. The layer most providers don't bring.

Time back, and more of the right families.

Most teams your size feel one of these the most. Today's job is finding out which — then going deep there.

SECURITY & STUDENT SAFETY

Six layers a school has to cover

You could build any one of these. The hard part is running all six, 24/7, with evidence your insurer and board will accept. Which keep you up at night?

LAYER 01

Identity & access

MFA on every account, conditional access, and admin-rights control across Google Workspace and your apps. Most breaches start at a stolen sign-in.

LAYER 02

Endpoints & devices

Threat detection on staff and student Macs and Chromebooks, disk encryption, and enforced patching — on campus and off.

LAYER 03

Email & web safety

Anti-phishing, malicious-link protection, and content filtering that keeps students safer online (and supports CIPA if E-rate applies).

LAYER 04

Backup & ransomware

Immutable, tested backups of servers and cloud data with a rehearsed recovery. The difference between an incident and a catastrophe.

LAYER 05

Student data & apps

Knowing which apps hold student data, what they collect, and that their contracts are sound — COPPA, SOPIPA, and PCI for tuition.

LAYER 06

24/7 monitoring & response

Eyes-on-glass with a defined response — the around-the-clock coverage a lean school team can't staff over nights and breaks.

YOUR TURN

The questions that actually shape a fit

This is the part that matters most. The more candid you are here, the more useful our free assessment and any proposal will be.

1

Where are you stuck on the 3CX cutover right now — registration, audio, inbound, or the Firewall Checker?

2

Is 3CX on-prem or hosted, what Check Point model is at the edge, and is Twilio for calls, parent SMS, or both?

3

Walk me through the environment — servers, endpoints, and what's on-prem versus in Google / the cloud?

4

On security: is MFA everywhere, what's your EDR and email security, and are backups tested?

5

Do you carry cyber-insurance — and what controls did the last application or renewal ask for?

6

Does the school take E-rate or federal funding, and which system is the student record (is MySchoolApp Blackbaud)?

7

How big is the team beneath you, and what projects are on your 2026 roadmap you'd love bandwidth for?

8

Besides you, who weighs in on a decision like this — the CFOO, the Head of Schools, the board?

A FREE FIRST STEP

Two easy yeses — and a read of your environment to keep

Before anyone talks contracts, we give you something useful: the project closed out, and a clear picture of where you stand.

FREE · NO CONTRACT · YOURS TO KEEP

Nexus Assess

A security and risk read of your actual environment:

- Internal + external vulnerability scan
- Dark-web credential exposure check
- Google Workspace / Microsoft 365 review
- Prioritized roadmap — yours to keep

No obligation. Whether or not we ever work together, the roadmap is yours to act on with your own team.

01

Close out the 3CX project

We help get the phone-and-firewall cutover clean — scoped on its own, a real read on how we work.

02

Free Nexus Assess

We scan and review, then hand you a plain-language, prioritized risk roadmap.

03

Right-sized co-managed proposal

Only the layers you want, scoped to your real environment, education pricing where eligible.

THE NEXT STEP

Two small steps. **Nothing to sign.**

RECOMMENDED

Close the 3CX project + free Nexus Assess

We help finish the phone-and-firewall cutover and scan your environment, then hand you a prioritized roadmap within about 10 business days — yours to keep, no contract, no obligation.

HAPPY TO SHARE

Our school security + AI playbook

I'll walk you through the broader security and practical-AI playbook we run for ourselves and our clients — useful context whether or not we work together.
