

PACIFIC UTILITY

AI Growth & Integration Strategy — Executive Summary

Prepared by Technijian | 2026-06-03 | Corona, California | pacificutility.com

1997

Building Since

5 Trades

One Source, One Schedule

ESOP

Employee-Owned · 2017

CA·NV·AZ

Tri-State Footprint

For more than twenty-five years Pacific Utility has built the underground that everything else stands on — utility engineering, wet, dry, high voltage, and streetlights, self-performed across California, Nevada, and Arizona. What it has not yet built is the digital and AI engine that makes that reputation findable, wins more of the right work, and lets a labor-short team bid more without adding estimators it cannot hire.

The Core Opportunity

Rebalance toward the boom — residential is cooling while grid, undergrounding, EV, broadband, and streetlights surge, and Pacific Utility already self-performs exactly that work. AI helps the firm chase and win more of it.

Own a category that is digitally asleep — no underground-utility contractor has claimed the AI-answer position, and none can claim the single-source, all-five-trades, tri-state story. First mover earns compounding authority.

Make bandwidth the advantage, not the ceiling — in a labor shortage, estimating capacity is the bottleneck. AI lets the firm bid more and sharper without hiring up; the licensed estimator still signs the number.

The Inflection — Two Diverging Engines

The market Pacific Utility serves is splitting. The two demand engines that ran side by side for years are now moving in opposite directions — and the firm is positioned, by trade mix and recent hiring, to ride the one that is rising. This is the "why now."

Engine	What's Happening (2025–2026)	What It Means for Pacific Utility
Residential (cooling)	Starts and deliveries pulling back across CA, NV, AZ; SoCal price softening; Las Vegas' slowest February sales in a decade	The developer/builder channel softens — a reason to diversify the bid mix
Grid & public infra (booming)	~\$1.4T U.S. utility capex 2025–2030; the largest transmission build ever; underground-line and transformer spend up sharply	The firm already self-performs high voltage, undergrounding, and streetlights — the exact scopes the boom demands
Federal & state programs	IJA grid modernization, DOE grid-hardening, NEVI EV charging, BEAD broadband, and CA SB 1 for streets	New, fundable channels — if the firm is found and prepared early
The labor shortage	Electricians retire faster than they're replaced; the workforce is projected to shrink as demand rises	Estimating bandwidth, not demand, becomes the binding constraint — exactly where AI pays

Why Pacific Utility Wins This

The demand is moving toward exactly what the firm does best — underground, high voltage, undergrounding, and streetlights — across three states where most rivals are single-state.

The moat is real and uncaptured: more than twenty-five years, employee-owned, the only contractor that can self-perform all five underground trades on one schedule — a story no competitor can claim and the firm barely tells online.

How AI Grows Pacific Utility

The engine runs three motions at once — get found and trusted (own the answer-engine, the single-source story, and the tri-state lane), win the work (project and permit intelligence plus bid and estimating acceleration on the booming grid and public work), and run leaner and remember (a twenty-five-year knowledge system and more bids per estimator). Every part respects the boundary that protects a fixed-price, safety-critical contractor.

Pacific Utility AI Engine - Get Found & Trusted, Win the Work, Run Leaner & Remember

Build authority for named buyers on the left, win more of the booming grid/public work in the center, do more with fewer estimators on the right.

GET FOUND & TRUSTED authority for named buyers	WIN THE WORK project intelligence + bids	RUN LEANER & REMEMBER do more with fewer estimators
Answer-Engine + Tri-State Local Own 'underground / dry / HV utility contractor [CA/NV/AZ city]' in AI answers. My SEO	Project & Permit Intelligence Flag developers, MPCs & agencies entitling/permitting scope - months early. Lead Gen	25-Year Knowledge System Past bids, jurisdictions & conflict-overlays into matched precedents. My AI
The Single-Source Story Own 'one contractor, all five trades' - the schedule-de-risking nobody else claims. My SEO	Bid / RFP Response Automation Assemble responsive public + private bids fast from PUI's history. My Dev	Safety & Compliance Docs HV safety, traffic-control plans, DIR / prevailing-wage, prequal packages. My AI
Project-Proof Scoreboard Structured, searchable case studies - lots energized, jurisdictions cleared. My SEO	AI Estimating & Takeoff Cut takeoff time; more bids per estimator - the human signs the price. My Dev	Schedule & Preconstruction Generative scheduling and substructure-conflict avoidance. My Dev
Rule 20 / Undergrounding Authority Claim the grid-hardening search lane no contractor owns. My SEO	Pre-Bid Account Dossiers Brief the team on each target developer, agency, or utility before pursuit. My AI	The Estimator Stays in Control AI assists; the licensed estimator / PM owns final pricing and signs. Boundary

* My SEO - My AI Lead Gen - My Dev - My AI. On fixed-price, safety-critical work, AI assists; the licensed estimator / PM owns final pricing and signs off - never autonomous bidding.

The Engine: Get Found & Trusted, Win the Work, and Run Leaner & Remember

The Three Motions

1 — Get Found & Trusted

Own "underground / dry / high-voltage utility contractor" across CA, NV, and AZ cities in Google and AI answers; publish the single-source, all-five-trades story no competitor can claim; claim the Rule 20 / undergrounding lane; and merchandise twenty-five years of named work into searchable proof. The whole category is answer-engine-blind — first mover earns compounding, credible authority.

2 — Win the Work

Project and permit intelligence flags the developers, master-planned communities, agencies, and utility programs entitling or permitting underground and electrical scope across three states — months early. AI then assembles responsive public and private bids fast and accelerates estimating, so the firm bids more of the booming work before the field crowds in.

3 — Run Leaner & Remember

Capture twenty-five years of bids, jurisdictional know-how, and conflict-overlay precedents into a searchable memory, and lift the output of every estimator — turning the labor shortage from a ceiling on growth into an advantage over slower rivals.

The Boundary That Builds Trust

On fixed-price, safety-critical work the rule is simple and absolute: AI assists; the licensed estimator or project manager owns the final price and signs; safety-critical calls stay with the qualified professional. Stated to a developer or an agency, that boundary is a reason to trust the firm — and it is genuinely hard to do well, which makes deploying AI inside it a durable advantage in 2026.

The Program

Lead with a modest entry program — real published Technijian rates — that makes the firm found and surfaces the right bids; add the AI estimating and knowledge build as a later expansion, once the entry proves the lift. No invented numbers.

Entry Program	What It Does	Investment
My SEO — Answer-Engine, Tri-State Local & Single-Source	AEO + the single-source story + the Rule 20 / undergrounding lane + a project-proof scoreboard (new)	\$500–\$1,500/mo*
My AI Lead Gen — Project, Permit & Account Intelligence (Starter)	Early project/permit/program intelligence across CA, NV, AZ; relationship-led, not volume	\$1,499/mo* + \$2,500 setup
My AI — Readiness Workshop + Content Engine	Leadership alignment, the boundary, and the content engine	TBD — discovery
ENTRY PROGRAM	The new growth layer: My SEO + Lead Gen Starter + the TBD workshop — starts small, no large build	Published + TBD

* Real published Technijian list rates. My SEO published tiers run \$500–\$1,500/mo (final tier set in discovery); My AI Lead Gen Starter is \$1,499/mo plus a one-time \$2,500 setup. The AI estimating, bid-assembly, and institutional-knowledge build, managed app services, and the fractional advisor are the Phase-2 expansion — no published rate, scoped in discovery. The Year-1 total is finalized then; no invented numbers.

How We'll Measure the Return

We do not lead with a multiple we cannot back. Year-1 return is modeled from real levers — more bids won, estimator throughput, and authority inbound — each tied to a number Pacific Utility already tracks (bid volume, win rate, average job size, estimating capacity). Targets are set from those baselines in discovery, and in this market a single additional grid or public-works award can outweigh the entire program cost. Illustrative until then — no number we can't back.

The Roadmap & Next Step

90 / 180 / 270 Day Growth Roadmap

Pacific Utility - Technijian program. Build authority, win more of the booming grid/public work, then run leaner.

* Bid-volume, win-rate & job-size targets calibrate after a 30-min discovery call (see the Questions section). Estimates shown are illustrative, not a quote.

90 / 180 / 270-Day Roadmap: Foundation, Win the Work, then Run Leaner & Remember

Recommended Next Steps

Step 1: A 30-minute discovery call to confirm the baselines and the program scope.

Step 2: Technijian returns a calibrated model and a fixed-scope Statement of Work within 5 business days.

Step 3: Phase 1 kickoff — the answer-engine foundation, the single-source story, and the proof scoreboard — inside 30 days.

You've built the contractor. Let's build the growth engine.
