01 Executive Summary

1930

Distributing Fuel Since

11,000+

Commercial Customers

15+

Western States Served

1B+

Gallons Delivered Yearly

SC Fuels is the West's market-leading independent fuel and lubricant distributor — and since 2021, part of Pilot Company, which is majority-owned by Berkshire Hathaway. It moves more than a billion gallons a year to over eleven thousand commercial accounts across fifteen-plus states, runs four delivery channels, and is actively buying up regional distributors. On scale, supply, and balance sheet, SC Fuels already leads. The question this blueprint answers is a different one: who turns that lead into a digital and AI advantage before a rival does it first?

Because on digital, SC Fuels is under-built relative to its size. It is content-light and shows no AI in its buyer experience, while one competitor — Booster — has built an app-first, AI-routed mobile-fueling service, and two others — Mansfield and World Kinect — lead the category on content and fuel-data tooling. None of them, however, has combined real scale with real AI in SC Fuels' Western backyard. That corner of the market is open, and SC Fuels is the one player with the scale to own it.

This blueprint is a focused, hybrid growth program with three moves: get found for the demand that already searches (local and answer-engine SEO, a page for every branch and service, and an upgraded customer portal with an AI assistant), win the named accounts worth winning (account intelligence, RFP automation, and pre-visit dossiers that arm the field team), and run leaner (route, tank, and compliance automation that protects margin). It is deliberately account-based where it should be — SC Fuels already knows who its commercial targets are — and demand-capturing where genuine search demand exists.

The Core Opportunity

SC Fuels leads on scale and supply (Pilot- and Berkshire-backed) but is digitally under-built. The "scale plus AI" corner of the Western market is uncontested — and SC Fuels is the only player big enough to claim it.

Real search demand goes uncaptured today: "bulk diesel delivery [city]," "cardlock near me," "DEF delivery," and "renewable diesel supplier" are searched every day, and SC Fuels has no per-branch pages to catch them. Local and answer-engine SEO claims that demand.

Growth is gated by how many accounts a finite field team can reach. Account intelligence multiplies the reps across fifteen states without proportional headcount — under SC Fuels' existing named-account strategy, not a broad lead-generation blast.

Note on figures: SC Fuels' internal metrics (current new accounts per month, churn, gross profit per account, compliance hours) were not available for this draft. Every projection below is labeled estimated and conservative, and calibrates to real numbers after a short discovery call — the specific questions are listed in Section 14.

02 The Market Position

Any growth plan for SC Fuels has to start by being honest about who SC Fuels is today — because the public story and the real one have drifted apart. The website still tells a third-generation, family-owned story. The reality is bigger: in 2021, SC Fuels became part of Pilot Company, one of North America's largest fuel operators, which is majority-owned by Berkshire Hathaway. The founding family's leadership stayed on to run the business, but the balance sheet, the supply infrastructure, and the national fueling network behind SC Fuels are now those of a top-tier energy company.

That changes the strategic posture entirely. SC Fuels is not a regional underdog defending its turf — it is the consolidator. In 2025 alone it absorbed Downs Energy's cardlock, fueling, and lubricants assets and acquired Lutz Petroleum, adding dozens of cardlock sites and thousands of customers in Southern California. The growth engine described in this document is therefore not about survival; it is about converting a position of strength into a durable digital and AI lead — and integrating each acquisition cleanly instead of letting acquired customers quietly churn.

Three Strengths to Build On

Scale and supply security: Pilot- and Berkshire-backed sourcing, plus access to a nationwide cardlock network (CFN and Pacific Pride, 230,000+ acceptance sites) that few regional rivals can match.

An acquisitive footprint: SC Fuels is actively buying regional distributors, which means a steady stream of new customer books to onboard, cross-sell, and retain — a job AI account intelligence is built for.

A real installed base: more than eleven thousand commercial accounts, from small family businesses to Fortune 500 fleets, across construction, agriculture, trucking, municipal, manufacturing, and waste.

The one thing SC Fuels has not yet done is tell that story online or put AI to work behind it. The Pilot-scale reality is a selling point sitting unused; aligning the brand with it is one of the Quick Wins in Section 13.

03 The Distribution Business Model

SC Fuels makes money as the operator in the middle of the fuel supply chain: it sources product at the rack and through Pilot's network, then delivers it to commercial customers through four distinct channels, billing and supporting each account along the way. Understanding those channels matters for a growth program, because each one is found, sold, and retained differently — and AI plugs into each at a different point.

How SC Fuels Reaches the Market

SC Fuels is the operator in the middle: it sources supply, runs four delivery channels, and serves 11,000+ commercial accounts.

Figure 3.0 — How SC Fuels reaches the market: supply, four delivery channels, and where AI plugs in

Four Channels, One Operator

Channel	What It Is	Primary Buyer
Bulk / bobtail delivery	Tank-truck delivery of gasoline, on- and off-road diesel, biodiesel, and renewable diesel to on-site tanks	Construction yards, farms, transload sites, large fleets
Mobile on-site fueling	A fuel truck refills fleet vehicles and equipment where they sit, overnight or between shifts	Construction, agriculture, transportation fleets
Cardlock network	Fleet fuel cards (CFN, Pacific Pride, and SC Fuels programs) accepted across 230,000+ sites nationwide	Over-the-road and regional commercial fleets
Wholesale, lubricants & DEF	Branded and unbranded supply, Chevron/Castrol/Valvoline lubricants, and diesel exhaust fluid	Retail stations, resellers, industrial accounts

What SC Fuels Already Does Well

The business runs on real operational strengths — each of which gets sharper with AI behind it:

- Supply security and price discipline backed by Pilot's sourcing — a hard advantage to replicate regionally.
- A genuine multi-channel offer: a customer can buy bulk, mobile, cardlock, and lubricants from one partner on one relationship.
- A self-service customer portal already in place (rebates, e-receipts, transaction controls) — a foundation to extend, not rebuild.
- Field sales reps who own long-term commercial account relationships — the human core that AI is meant to amplify, not replace.

Why the Model Rewards AI

Every channel runs on data — gallons, routes, tank levels, card transactions, prices, and credits — and most of that data is under-used today. That is exactly the raw material AI turns into forecasting, retention, and margin.

Because the same account often buys across several channels, share-of-wallet growth (selling a bulk customer a cardlock program, or a fleet customer lubricants and DEF) is one of the cheapest forms of growth — and AI is good at spotting where it is sitting.

The recurring lines — keep-full tanks, cardlock, lubricants, DEF — are reorderable revenue that rewards predictive replenishment and churn prevention, both of which are automatable.

04 Industry & Regulatory Landscape

Two forces define the next few years for a Western fuel distributor, and both favor the operator that modernizes first. The first is market structure: the industry is consolidating fast, demand for traditional fuels is softening as fleets grow more efficient and begin to electrify, and renewable diesel is becoming the growth-and-margin offset. The second is regulation: California and the Western states impose one of the heaviest fuel-compliance burdens in the country — and that burden is precisely where AI removes cost and risk.

Market Forces (2024–2026)

Force	What's Happening	Implication for SC Fuels
Consolidation	Refiners and large distributors are buying regional players to lock in volume	SC Fuels is on the buy side — the opportunity is clean integration and cross-sell of acquired books
Softening fuel demand	Gasoline use is easing as efficiency rises; medium-duty fleet electrification is starting at depots	Defend and expand share of each account; win net-new accounts to outrun flat demand
Renewable diesel (R99)	A drop-in diesel substitute whose economics are driven by LCFS credits	A higher-margin growth line SC Fuels already sells — and can lead on, with content and targeting
Telematics convergence	Fuel cards, telematics, and tank sensors are merging; ~14% of fleet fuel spend is lost to fraud/theft	Data and fraud controls become a selling point, not just a back-office function
Driver / labor shortage	CDL and Hazmat driver scarcity pressures delivery operations	Route and delivery optimization protects service levels with the same headcount

The Regulatory Burden Is the AI Thesis

Compliance in this industry is heavy, recurring, and error-prone — which makes it an ideal target for automation. The table below ranks the major regimes by how much documentation work AI can take off SC Fuels' plate.

Regime	What It Requires	AI Reduction
CARB / LCFS	Carbon-intensity tracking, credit and deficit accounting, quarterly reporting; the CI target stepped up in mid-2025	High
RFS / RINs (EPA)	Renewable Identification Number tracking, renewable-volume obligations, and attestation	High

Regime	What It Requires	AI Reduction
IFTA fuel tax	Multi-jurisdiction mileage-and-fuel tax filing — manual filing costs roughly 88 hours a year per fleet	High
UST rules	Annual monitoring certification, 36-month tank testing; single-wall tanks had to be closed by end of 2025	Medium
DOT / Hazmat	Driver and Hazmat certifications, bills of lading and manifests, placarding	Medium
Fuel excise / sales tax	Layered federal, state, and local excise determination	Medium

LCFS, RINs, and IFTA Are the Fastest ROI

These three regimes are heavy, recurring, and rules-based — the profile that AI automates most reliably, with a clean before-and-after the client can measure in hours saved.

CARB and LCFS are uniquely Western, so SC Fuels' footprint makes the burden especially acute — and the automation especially valuable.

Compliance automation is also the easiest credibility-builder: bounded, painful, and obviously worth fixing. It proves the program works fast, then funds the bigger growth plays.

05 Where the Growth Lives

Before tactics, one question decides the strategy: where does SC Fuels' next dollar of growth actually come from? The answer is a few distinct pools of demand — some of them searchable and under-captured today, and some of them a finite set of named accounts won by the field team. The program is built to serve all of them, which is why it pairs broad search capture with targeted, account-based outreach instead of one undirected campaign.

Demand Pool	Who's Looking	Example Triggers / Searches	How SC Fuels Wins It
Searchable local	Fleet, construction, ag buyers comparing suppliers	"bulk diesel delivery [city]", "cardlock near me", "DEF delivery", "renewable diesel supplier"	Local + AEO SEO, per-branch pages, portal capture
Named commercial accounts	Large fleets, contractors, ag operations the reps know by name	(won by outreach, not search) fleet expansions, new yards, fuel-spend signals	Account intelligence + per-account outreach + reps
Municipal / government	City, county, transit, and waste procurement officers	Posted RFPs and bids for fuel-supply contracts	RFP / bid auto-response + speed + service depth
Renewable / ESG	Ports, corporate ESG fleets, LCFS-motivated buyers	"renewable diesel," "R99," carbon-reporting needs	Authority content + targeted outreach on the margin line

Two Ways to Grow, One Program

The searchable pool is demand that already exists — buyers type these queries and the results point to whoever shows up, which is rarely SC Fuels today. Local SEO, answer-engine optimization, and an upgraded portal turn that traffic into quotes and open accounts.

The named accounts and municipal contracts are not won by search; they are won by the field team. That track stays account-based, so the program is never an undirected "spray-and-pray" — AI surfaces the right targets and arms the rep who closes them.

This honesty is the point: SC Fuels already knows who its biggest targets are. The value of AI is depth and timing on those accounts, plus capturing the broad search demand the field team can't chase one quote at a time.

06 The SC Fuels Customer

SC Fuels serves a set of distinct commercial buyer types. Each is found and sold differently, and they differ meaningfully on both account fuel volume and margin or strategic value —

which is why the segment matrix below uses those two axes to show where to point the search effort and where to point the account-based outreach.

1 — The Fleet Operations Director

Role	Runs fueling for a trucking, logistics, or transportation fleet — cards, bulk, and cost-per-mile are their world.
Pain Points	Fuel is the second-biggest line item; card fraud and off-route fills bleed margin; reconciling spend across sites is manual.
Decision Driver	Uptime, network coverage, transaction control, and clean data — price matters, but so does never having a truck sit dry.
AI Opportunity	Fraud alerts and spend analytics make the SC Fuels card a data product, not just a payment method; churn models flag at-risk accounts early.
Technijian Hook	My Dev — portal + card analytics. My AI — fraud detection and churn prediction that defend a high-volume account.

2 — The Construction Equipment / Operations Manager

Role	Keeps equipment and vehicles fueled across active job sites, often with on-site tanks and off-road (red-dye) diesel.
Pain Points	A dry tank stops a crew; sites move; ordering is reactive; mobile fueling has to show up on time, every time.
Decision Driver	Reliability and responsiveness — keep-full service and on-site fueling that never lets a job wait on fuel.
AI Opportunity	Predictive tank monitoring triggers refills before run-dry; demand forecasting and route optimization keep mobile fueling on schedule.
Technijian Hook	My Dev — predictive tank monitoring + route optimization. My SEO — capture "[city] on-site fleet fueling" search demand.

3 — The Agricultural Operations Manager

Role	Manages fuel for a farm or ag operation — seasonal, remote, and heavily off-road diesel.
Pain Points	Demand spikes at planting and harvest; tanks are far from the road; running out mid-season is costly.

Decision Driver	A supplier who anticipates the season and keeps remote tanks full without being chased.
AI Opportunity	Seasonal demand forecasting and keep-full automation; local search capture for ag-fuel queries by region.
Technijian Hook	My Dev — keep-full + forecasting. My SEO — regional ag-fuel pages and answer-engine presence.

4 — The Municipal / Government Fleet & Procurement Officer

Role	Procures fuel for a city, county, transit agency, or waste operation — almost always through a formal RFP.
Pain Points	Bids are documentation-heavy and deadline-driven; compliance and reporting are scrutinized; incumbents are hard to unseat.
Decision Driver	A complete, on-time, compliant bid and dependable reporting — plus diversity-spend credentials, where SC Fuels is at a disadvantage.
AI Opportunity	RFP and bid auto-response turns days of assembly into hours, letting SC Fuels respond to more bids faster — speed and depth that counter the missing diversity wedge.
Technijian Hook	My AI — RFP / bid response automation. My Dev — compliant reporting dashboards for awarded contracts.

Emerging & Higher-Margin Segments

5 — The Sustainability / ESG Fleet Buyer

Role	A port, public agency, or corporate fleet under pressure to cut carbon — a buyer of renewable diesel (R99) and biodiesel.
Pain Points	Needs lower-carbon fuel without new equipment, plus clean carbon reporting to prove it.
Decision Driver	A credible renewable-fuel supply and the documentation to back the sustainability claim.
AI Opportunity	Authority content owns the renewable-diesel and LCFS questions in search and AI answers; targeting matches LCFS economics to the right accounts.
Technijian Hook	My SEO — renewable-diesel / LCFS authority content. My AI — opportunity intelligence on which accounts to push R99.

6 — The Lubricants & DEF Industrial Buyer

Role	A manufacturer or industrial operation buying lubricants, DEF, and chemicals — often alongside fuel.
Pain Points	Wants one reliable supplier for fuel and lubricants; reorders and product selection are a manual chore.
Decision Driver	Lower volume than the fuel accounts but higher margin — and a natural cross-sell from an existing fuel relationship.
AI Opportunity	Share-of-wallet intelligence flags fuel accounts that should be buying lubricants and DEF; reorder automation captures the recurring lines.
Technijian Hook	My AI — cross-sell and reorder intelligence. My SEO — lubricant and DEF product content.

Figure 6.0 maps each segment by account fuel volume and margin or strategic value — showing which buyers are the anchor accounts to defend and win, which are higher-margin niches, and which represent high-volume recurring revenue.

Figure 6.0 — SC Fuels Customer Segments: Account Fuel Volume vs. Margin / Strategic Value

07 Competitive Landscape

SC Fuels competes against three different kinds of rival: the traditional digital leaders it should match (Mansfield and World Kinect/Flyers, which lead on content and fuel-data tooling), the digitally-invisible regionals it already out-resources (Hunt & Sons, Ramos, and most small players), and the digital-native disruptor it should learn from (Booster, whose app-first, AI-routed model shows what a modern fuel buyer experience looks like). The pattern across all of them is the opportunity: no one combines real scale with real AI in the West.

Competitor	Market	Posture vs. SC Fuels
World Kinect / Flyers	Global; Flyers covers the Western US (Auburn, CA)	The largest direct West Coast cardlock and lubricants rival; scale and capital, but a giant in which local accounts can feel small
Mansfield Energy	National (Gainesville, GA); 3B+ gallons/yr	The digital benchmark — FuelNet portal, fuel-data analytics, daily market content; Georgia-centric, so the West is not its home turf
Pinnacle Petroleum	Huntington Beach, CA — next door; 25 states	Closest local peer; woman-owned (WBE) diversity-spend wedge and tank monitoring; beatable on digital depth
Ramos Oil	West Sacramento, CA; CA + NV	Minority-owned (MBE) diversity wedge and NorCal government ties; smaller, thinner SoCal presence, dated digital
Hunt & Sons (Phillips 66)	Sacramento, CA; NorCal	NorCal cardlock specialist, now refiner-owned; digitally fragmented and weak — easy to out-modernize
Star Oilco	Portland, OR; Pacific Northwest	Tiny, not a SoCal threat — but proof that content marketing works in this category, punching above its weight on SEO

Competitor	Market	Posture vs. SC Fuels
Booster	San Mateo, CA; major metros incl. CA	The digital-native disruptor: app-first mobile fueling with a named AI routing engine and Amazon/UPS customers; the experience bar to clear
NextNRG (ex-EzFill)	Miami, FL; expanding into LA & SF	Mobile-fueling consolidator, but financially fragile — a cautionary tale on the model's economics

Digital & AI Maturity Scorecard

Stripping the field down to the digital fundamentals that drive modern buying shows the gap clearly — and shows that SC Fuels starts from a solid base, not behind.

Player	Modern Site	Portal	Content / SEO	AI	Verdict
Mansfield	Yes	Yes	Strong	Data	Traditional digital leader
World Kinect / Flyers	Yes	Yes	Strong	Data	Traditional digital leader
Booster	Yes	App	Good	Yes	Digital-native benchmark
Pinnacle	Yes	Partial	Light	No	Mid — beatable on depth
Ramos / Hunt & Sons	Dated	Basic	Weak	No	Digitally invisible
SC Fuels (today)	Yes	Yes	Light	None	Solid base, AI-blank

Figure 7.0 plots the field on the two axes that matter — scale and reach against digital and AI maturity. SC Fuels sits where no rival does: in the high-scale row, but below the leaders on AI. The move is straight up.

Figure 7.0 — Competitive Positioning: Scale / Reach vs. Digital & AI Maturity

Where SC Fuels Wins — The White Space

The "scale plus AI" corner is empty in the West. The digital leaders (Mansfield, World Kinect) do not have SC Fuels' regional density and Pilot-backed supply; the digital natives (Booster) do not have its scale. SC Fuels can occupy a corner neither can reach.

Local search demand is unclaimed: roughly fifteen branches and no per-city pages means real "[fuel service] + [city]" demand goes to whoever ranks. First to build location pages and answer-engine content captures it.

Acquisitions are a growth lever competitors are not pursuing with AI: every book SC Fuels buys (Downs, Lutz, and the next) is a list to cross-sell and retain, not just absorb.

The one structural disadvantage — no minority- or woman-owned (MBE/WBE) status for set-aside RFPs — is answered with speed and depth: RFP automation that lets SC Fuels respond to more municipal bids, faster, backed by Pilot-scale supply.

08 Brand & Digital Presence Audit

For a Pilot-backed market leader moving more than a billion gallons a year, the online presence materially under-represents the operation. The quality and scale of the business are far ahead of how it shows up in search and in AI answers — and closing that gap is the fastest early win.

Digital Asset	Current State	Gap / Opportunity
Local / location pages	No per-city or per-branch pages across ~15 Western markets	Real "[fuel service] + [city]" demand goes uncaptured — a page per branch and service claims it
Answer-engine presence	Effectively none	No content ranking in Google or cited by ChatGPT, Perplexity, and AI Overviews for fuel, renewable, or compliance questions
Content engine	Thin, low cadence	Mansfield and even tiny Star Oilco out-publish SC Fuels; a renewable / LCFS / fuel-market hub would outrank both regionally
Ownership / brand story	"Family-owned" copy that predates the Pilot era	The Pilot- and Berkshire-backed scale is a selling point being left unused, and the stale story is a credibility and SEO liability
Customer portal	Real self-serve portal (rebates, e-receipts, controls)	A strong base — extend it with an AI assistant and self-serve quoting toward the Booster experience bar
AI in the buyer experience	None evident	Competitors (Booster) market AI; SC Fuels has none on the buyer-facing side — the clearest single gap
Social presence	Modest (~5K LinkedIn followers) for the size	Under-weight for a 900-person, multi-state leader; a content engine feeds it

The Presence Gap Is the On-Ramp

None of this requires changing the business — only making its existing scale and strengths visible, findable, and quotable.

Per-branch location pages, a renewable / compliance content hub, and an AI-assisted portal are low-cost, compounding moves with fast SEO and credibility returns.

These are also the natural first ninety days of the program: fix the foundation and the story, then build the engine on top of it.

09 Technijian Capability Proof

Before the growth program, one thing must be clear: Technijian has already built the systems SC Fuels needs. The platforms below are delivered and operating for real clients — not proposals. Each maps to a specific SC Fuels use case, with security and compliance built in rather than bolted on.

Proven Build 1 — Multi-Agent SEO + Answer-Engine Platform

What Technijian Built: Technijian operates a multi-agent platform (Claude, GPT-4o, and Gemini with MCP servers, plus SEMrush, GA4, and Perplexity) that produces authority content, ranks it in Google, and positions clients as the cited source inside AI assistants.

How This Applies to SC Fuels: This is the engine that gets SC Fuels found: own "bulk diesel delivery [city]," "renewable diesel supplier," cardlock and DEF queries in both Google and AI answers, and build the per-branch location pages SC Fuels does not have today.

Proven Build 2 — My AI Lead Gen: Account-Based Outbound

What Technijian Built: My AI Lead Gen is Technijian's productized outbound engine — harvest high-fit targets from public data, enrich and score them, and deliver outreach-ready personalized sequences — replacing the data-subscription tax of tools like ZoomInfo and Apollo.

How This Applies to SC Fuels: For the named-account track it builds the list of commercial fleets, contractors, ag operations, and municipal buyers worth winning by territory and fuel signal, with a per-account dossier for each rep visit — depth on the accounts SC Fuels already knows it wants, not a broad blast.

Proven Build 3 — AI Document Intelligence (RFPs: Days to Minutes)

What Technijian Built: Technijian deployed document intelligence for FINRA-registered broker-dealers that auto-populates complex due-diligence questionnaires, cutting RFP response from days to minutes with 60–80% less manual review.

How This Applies to SC Fuels: Pointed at municipal and large-fleet fuel bids, the same engine drafts and assembles RFP responses in hours instead of days — letting SC Fuels respond to more bids, faster, the speed-and-depth answer to rivals' diversity-spend credentials.

Proven Build 4 — AI-Native Custom App Delivery (My Dev)

What Technijian Built: Technijian's AI-native software lifecycle delivers custom web apps three to five times faster than traditional development — portals, dashboards, and integrations built around a client's actual process.

How This Applies to SC Fuels: This builds the operational layer: an upgraded self-serve customer portal with an AI assistant and online quoting, predictive tank-monitoring and keep-full alerts, and the LCFS, RIN, and IFTA compliance automation that turns recurring paperwork into a scheduled job.

Proven Build 5 — Local SEO + Review & Reputation Engine

What Technijian Built: Technijian built an AI system that manages Google Business Profiles and requests, monitors, and responds to reviews across the local directories that search ranking depends on.

How This Applies to SC Fuels: Across SC Fuels' fifteen-plus branches, complete and consistent Business Profiles and active reviews lift the local rankings that capture "[fuel service] + [city]" demand — and they are exactly the third-party signals AI assistants weigh when deciding whom to cite.

10 How AI Transforms SC Fuels' Growth Engine

The engine runs three motions at once: get found for the demand that searches, win the named accounts worth winning, and run leaner so margin and service hold as demand shifts. The first motion captures broad search demand at scale; the second is account-based by design, aimed at the targets SC Fuels already knows; the third protects and compounds the

base. Together they turn SC Fuels from a scale leader that is digitally quiet into the obvious, modern answer in its markets.

SC Fuels AI Growth Engine - Get Found, Win Named Accounts, Run Leaner

Searchable demand on the left; account-based outbound to named fleets in the center; operations & compliance on the right.

* My SEO - My AI Lead Gen - My Dev - My AI. AI surfaces and arms the field team and Pilot's supply scale - it does not replace the rep relationship that closes a supply contract.

Figure 10.0 — The Engine: Get Found, Account Intelligence & Outbound, and Internal Automation

Motion	Play	What It Does	Metric	Technijian Service
Get Found	Local + AEO search	Rank for "[fuel service] + [city]" and answer-engine queries	Organic leads / mo	My SEO
Get Found	Location / branch pages	A page per branch and service across the Western footprint	Local rankings	My SEO
Get Found	Authority content + GBP	Renewable / LCFS / fuel-market hub + reviews per branch	Citations, reviews	My SEO

Motion	Play	What It Does	Metric	Technijian Service
Account Intel	Account-based prospecting	Named fleet, construction, ag & municipal targets by territory	Qualified accounts / mo	My AI Lead Gen
Account Intel	Trigger / signal monitoring	New permits, fleet expansions, posted RFPs, rival contract expiries	Triggered outreach	My AI
Account Intel	RFP / bid auto-response	Draft and assemble municipal & large-fleet bids in hours	Bids submitted, win rate	My AI
Account Intel	Dossiers + churn model	Pre-visit briefs for reps; flag declining-gallon accounts	Meetings, retained volume	My AI
Run Leaner	Portal + AI chatbot	Self-serve orders, invoices, status, cardlock support 24/7	Self-serve rate	My Dev
Run Leaner	Route & demand optimization	Forecast demand; optimize bulk and mobile delivery routes	Cost per delivery	My Dev
Run Leaner	Predictive tank monitoring	Keep-full refills triggered before a tank runs dry	Run-dry events	My Dev
Run Leaner	LCFS / RIN / IFTA automation	Automate carbon-credit, RIN, and fuel-tax reporting	Compliance hours saved	My AI

The Honest Boundary

Local SEO, answer-engine content, and the portal get SC Fuels found and turn searchers into quotes and open accounts — most of that work is highly automatable.

For the named commercial and municipal accounts, AI surfaces the right targets, times the outreach, and arms the rep — but the relationship, the on-site service promise, and Pilot-scale supply still close the contract.

That honesty is the point: the plan captures broad demand at scale and makes the named-account effort sharper, without pretending software signs a fuel-supply contract on its own.

11 Business Impact & Service Investment

The model below is built from public and industry benchmarks because SC Fuels' internal numbers were not available for this draft. Every figure is estimated and conservative; the discovery questions in Section 14 replace these assumptions with real baselines. The ROI logic holds across a wide range of inputs, because the two levers — net-new commercial accounts and retained or expanded volume on the existing base — are large relative to the program cost.

Projected KPI Lift (Estimated)

KPI	Estimated Current	With the Program	Direction
New commercial accounts / quarter	Field-team limited	Inbound + account-based	More named wins
Local search capture (per branch)	None (no location pages)	Ranking across markets	Local demand captured
Answer-engine citations	None	Cited for fuel / renewable / compliance	Durable visibility
RFP / bid turnaround	Manual, days	Drafted in hours	More bids, faster
Cardlock / account churn	Reactive	Predicted and saved	Retained volume
Compliance hours (LCFS / RIN / IFTA)	Manual	Automated	Hours recovered

Year-1 ROI Model (Estimated, Conservative Assumptions)

Model Input	Conservative	Target	Aggressive
Net-new commercial accounts (Y1)	+6	+12	+24

Model Input	Conservative	Target	Aggressive
Est. annual gross profit per new account*	\$40,000	\$40,000	\$40,000
Gross profit from new accounts	+\$240,000	+\$480,000	+\$960,000
Retained + expanded volume (existing base)**	+\$80,000	+\$160,000	+\$320,000
Total additional annual gross profit	+\$320,000	+\$640,000	+\$1,280,000
Technijian Program Investment (Y1)	~\$247,000	~\$247,000	~\$247,000
Modeled ROI Ratio	1.3x	2.6x	5.2x

* Placeholder annual gross profit per new commercial account, blended across small and large; calibrates to SC Fuels' actual per-account economics in discovery. ** Modeled from churn prevented and share-of-wallet expansion (cardlock, lubricants, DEF) across the 11,000-account base. All figures projected on gross profit, not revenue, and not guaranteed.

Technijian Service Investment Map

Service	Scope	Monthly	Y1 Total
My SEO — SEO + AEO + Local	Multi-state local + answer-engine SEO, per-branch location pages, renewable / compliance content hub	\$2,500/mo	\$30,000
My AI Lead Gen — Account Intelligence (Enterprise)	Named commercial / fleet / municipal prospecting, enrichment, dossiers, and RFP intelligence across the Western footprint	\$6,999/mo	\$84,000
My AI — Fractional AI Advisor	AI program leadership, model governance, and implementation QA	\$2,000/mo	\$24,000
My Dev — Managed App Services	Hosting, monitoring, and ongoing optimization of the portal and automations	\$1,200/mo	\$14,400
My Dev — Custom Build (one-time, phased)	Portal + AI chatbot, RFP automation, and LCFS / IFTA compliance tooling	—	\$90,000

Service	Scope	Monthly	Y1 Total
My AI — Executive AI Workshop (one-time)	Leadership alignment and roadmap	—	\$5,000
YEAR-1 TOTAL INVESTMENT	Recurring \$12,699/mo + builds		~\$247,000

The Math That Matters

Winning roughly six net-new commercial accounts in Year 1, at an estimated \$40,000 gross profit each, covers most of the full program on its own — before counting a dollar of retained volume or efficiency.

Local search demand is the cheapest demand to capture, and it compounds: once SC Fuels ranks and gets cited, leads arrive month after month with no per-click cost.

The program is phased — start with the foundation and capture layer, prove the lead and bid flow, then scale account-based outreach and compliance automation — which lowers the entry point and de-risks the spend.

12 Implementation Roadmap

The roadmap runs on a 90 / 180 / 365-day cadence suited to a multi-state, regulated, enterprise operation: build the foundation first (local SEO, location pages, and the capture layer), then stand up the demand-and-intelligence engine (content, citations, the named-account list, and an RFP pilot), then scale outbound and automate compliance and operations. Meaningful inbound and bid speed are visible inside the first ninety days; the bigger automations are given realistic runway.

Figure 12.0 — SC Fuels Growth Program: 90 / 180 / 365-Day Roadmap

Phase 1 — Foundation (Days 1–90)

Get the digital base right and stand up the layer that turns visits into quotes and open accounts.

Milestone	Deliverables
1.1 — Local / AEO Foundation	Build the keyword and answer-engine question map. Ship technical SEO, schema, and the first per-branch location pages. Refresh the ownership and scale story so the Pilot-backed reality works for SC Fuels in search and on the page.
1.2 — Capture Layer Live	Add an AI assistant and self-serve quoting / open-account flow to the existing customer portal, with source-tagged lead tracking so SC Fuels knows which queries and branches actually convert.

Phase 2 — Demand & Intelligence Engine (Days 91–180)

Publish the content that ranks and gets cited, and build the named-account intelligence base.

Milestone	Deliverables
2.1 — Content & Answer-Engine Engine	A renewable-diesel, LCFS, and fuel-market authority hub publishing on a steady cadence. First Google rankings for priority terms and first AI-assistant citations for the questions buyers ask.

Milestone	Deliverables
2.2 — Account Intelligence Base	My AI Lead Gen harvests the named commercial and municipal target lists by territory and fuel signal. First per-account dossiers to the field team, plus an RFP / bid-automation pilot and an at-risk-account churn model.

Phase 3 — Scale & Compliance (Days 181–365)

Scale the account-based outreach, automate the heavy compliance work, and compound what is converting.

Milestone	Deliverables
3.1 — Account-Based Outreach at Scale	Personalized sequences running across the named universe; reps supported by dossiers and trigger alerts. RFP automation in production. New commercial accounts closing.
3.2 — Compliance + Optimize	LCFS, RIN, and IFTA reporting automated. Route and predictive tank-monitoring optimization live. ROI dashboard delivered against the Section 14 baselines.

13 Quick Wins — Start This Week

Five actions SC Fuels can take immediately — before any Technijian engagement. Each creates value this week and leads naturally into the larger program.

1 — Build One Location Page as a Template

Pick the largest branch and publish a single, complete location page — services, fuel types, service area, hours, and a quote request. It costs almost nothing, it will start ranking for "[fuel service] + [that city]," and it becomes the template for every other branch.

2 — Claim and Complete Every Google Business Profile

Verify and fully complete the Google Business Profile for each branch — services, hours, photos, and categories. Commercial buyers and procurement officers do check, and complete profiles are free local visibility that also feed the AI answers.

3 — Publish One Renewable-Diesel / LCFS FAQ

Write a single plain-language page answering the questions ESG and fleet buyers actually ask: "Is R99 renewable diesel a drop-in for my fleet?", "How does it affect my LCFS position?" Almost no competitor has built this — it is the seed of content that gets cited in AI answers.

4 — Align the Ownership Story With Reality

Update the website copy so the Pilot- and Berkshire-backed scale works for SC Fuels instead of against it. "Backed by one of North America's largest fuel companies" is a supply-security selling point — and it removes the credibility gap of a stale family-owned story.

5 — Ask Five Anchor Accounts for a Case Study

Reach out to five long-standing commercial accounts and ask for a short quote about what the SC Fuels relationship removes from their week. Customer proof is the most persuasive asset in an account-based sale — and SC Fuels has already earned it.

14 Questions to Calibrate This Plan

This blueprint was built from public information. The numbers in Sections 11 and 12 are deliberately conservative estimates — a short discovery call replaces them with SC Fuels' real baselines and sharpens the entire program. These are the questions that move the model the most:

Topic	What We'd Confirm	Why It Matters
Account growth	Net-new commercial accounts per month today and field-sales headcount by territory	Calibrates the account-based outbound scope and ROI
Account economics	Average annual gross profit per commercial account	Sets the primary revenue line in the ROI model
Retention	Current churn rate on cardlock and commercial accounts	Baselines the retained-volume opportunity
Compliance load	Hours and cost spent today on LCFS, RIN, and IFTA reporting	Sizes the Tier-3 automation payback
Systems	CRM and billing / back-office systems in use	Defines the integration surface for funnels and automation
Footprint	Exact branch count, states, and renewable-diesel share of volume	Scopes the location-page build and the ESG / LCFS opportunity
Marketing	Who owns web / marketing today, current spend, and the relationship to Pilot's central marketing	Determines where the SEO and content work plugs in
Sponsor	Whether the engagement buyer is SC Fuels' own leadership or routed through Pilot	Shapes the sales motion and approval path

How to Use This Section

None of these questions block starting — the Quick Wins and the Phase 1 foundation proceed regardless.

A single 30-minute call answers most of them and lets Technijian return a calibrated ROI model and a fixed-scope Statement of Work.

The goal is a plan built on SC Fuels' real numbers — not on our conservative estimates.

15 What Happens Next

SC Fuels already has the hard things: scale, supply security, a multi-channel offer, an installed base of more than eleven thousand accounts, and the backing of one of North America's largest fuel companies. What it has not yet done is convert that lead into a digital and AI advantage — and the corner of the market where scale meets AI is still open in the West.

The opportunity is concrete: buyers are already searching for what SC Fuels sells, named accounts and municipal contracts are won by a field team that AI can multiply, and the heavy compliance and operations work is exactly what automation removes. A focused, hybrid program captures the search demand, sharpens the account-based effort, and protects margin — without pretending software replaces the rep who closes the deal.

Recommended Next Steps

Step 1: A 30-minute discovery call to answer the Section 14 questions and confirm program scope and sponsor.

Step 2: Technijian returns a calibrated ROI model and a fixed-scope Statement of Work within 5 business days.

Step 3: Phase 1 kickoff — the local / AEO foundation, the first location pages, and the AI-assisted capture layer — live inside 30 days of signature.

16 About Technijian

Technijian is an AI-native managed services and technology firm headquartered in Irvine, California, serving small and mid-sized businesses since 2000. We build and operate the AI systems that help regional businesses compete at scale — with security and compliance built in, not bolted on.

Service	What It Delivers for SC Fuels
My SEO	Local and answer-engine SEO — ranking in Google and getting cited by AI assistants — plus per-branch location pages and the renewable / compliance content hub that make SC Fuels findable across its Western markets
My AI Lead Gen	Account-based outbound that harvests, enriches, and sequences the named commercial and municipal accounts worth winning — supporting the field team, not replacing it
My AI	AI strategy and builds — RFP automation, churn and demand intelligence, and LCFS / RIN / IFTA compliance automation, with governance and security throughout
My Dev	Custom, AI-native builds — the AI-assisted customer portal, online quoting, predictive tank monitoring, and the dashboards that run the program
