Axis Research & Technologies holds a position in the medical device training industry that no competitor can replicate. Four nationally distributed bioskills facilities, a proprietary AI telemetry platform (OMNIMED SmartOR), a landmark partnership with the University of Maryland School of Medicine, and a decade of credibility serving the medical device industry's most demanding training requirements — these are not capabilities a competitor can spin up in a quarter.

Yet Axis is virtually invisible digitally. A company building the nation's first AI-powered Smart Surgical Performance Center has fewer than 50 LinkedIn followers. Its facilities — which serve FDA-regulated training for some of America's largest medical device manufacturers — cannot be found through the search queries its clients use daily. The OMNIMED SmartOR platform, a genuine AI innovation in surgical performance analytics, has no dedicated product presence online.

This blueprint identifies three moves that close the gap between Axis's operational excellence and its commercial reach: getting discovered by the right medical device buyers, winning named-account relationships through AI-assisted intelligence and outreach, and scaling the technology platform alongside the physical facilities. The goal is not to rebuild Axis — it is to ensure that the world finds what Axis has already built.

Ravi Jain and the Technijian team prepared this analysis after learning about Axis's work and recognizing an immediate alignment: Technijian specializes in helping healthcare technology organizations deploy AI that drives growth, not just efficiency. We look forward to a conversation with Nick Moran and Jill Goodwin about where to begin.

02 About Axis Research & Technologies

Axis Research & Technologies was founded in 2014 by Nick Moran with a singular insight: the medical device industry needed a purpose-built, commercially accessible bioskills laboratory that could serve the full lifecycle of device development and surgeon adoption. What began as a single facility in Irvine, California has grown into a four-location national platform — Orange County, Columbia (MD), Nashville (TN), and Houston (TX) — each operating state-of-the-art cadaver and simulation labs designed for the rigorous demands of FDA-regulated surgical training.

Under the leadership of President Nick Moran and CEO Jill Goodwin (appointed October 2025, previously COO), Axis has evolved beyond a facility operator into a health technology company. The OMNIMED SmartOR platform — Axis's proprietary AI telemetry and performance analytics system — captures real-time data from surgical procedures, benchmarks outcomes, and generates the kind of performance intelligence that device manufacturers, academic medical centers, and training directors cannot get anywhere else.

Figure 1: Axis Research & Technologies — Service & Impact Model

Four Locations. One National Platform.

Location	Market	Key Capabilities	Strategic Role
Irvine, CA (HQ)	West Coast	Full bioskills + AV + conference center	Flagship / medtech hub
Columbia, MD	Mid-Atlantic / DC	Bioskills + UMD partnership anchor	Academic + fed. agency
Nashville, TN	Southeast / Midwest	Full bioskills lab, growing medtech region	Regional expansion
Houston, TX	South / Oil-med	Opened 2025, Texas Medical Center proximity	Newest; high-growth market

The UMD Partnership — A National First

In October 2025, Axis announced a joint venture with the University of Maryland School of Medicine to build the nation's first AI-powered Smart Surgical Performance Center — 36,000 sq ft integrating cadaveric training, high-fidelity simulation suites, and the OMNIMED SmartOR platform.

Groundbreaking is planned for 2026. This partnership elevates Axis from a regional facility operator to the defining institution in AI-assisted surgical education nationally.

03 The Medical Device Training Landscape

The medical device industry operates under a fundamental commercial constraint: no surgeon adopts a new device without hands-on training, and no device reaches commercial scale without a credentialed training pathway. The FDA's requirements for class II and III device clearance include clinical training documentation, which means every new device launch requires lab-based surgeon education before it can be prescribed or implanted.

This is the market Axis serves. It is not discretionary. Medical device companies do not cut training budgets because they cannot commercialize devices without them. The \$26 billion global medical device education and training market reflects this structural demand, growing at a sustained rate driven by device innovation, surgical specialization, and post-pandemic backlog recovery.

Market Forces Driving Demand

Force	Detail	Axis Relevance
FDA Training Requirements	Class II/III devices require surgeon training documentation pre-commercialization	Every new device = potential Axis booking
Surgical Backlog Recovery	Post-COVID case volume surged; skills refresh demand at record high	Immediate near-term booking demand
AI in Surgical Simulation	\$3.2B market by 2028; 22% CAGR	OMNIMED SmartOR is ahead of the curve
Geographic Expansion	Device companies need training at multiple US sites	4-location footprint is a differentiator
Academic Partnerships	Universities seek external lab capacity without CapEx	UMD model is replicable nationally
Skills Gap in New Specialties	Robotic surgery, endovascular, spine — all require simulation-first pathways	Wet/dry lab + high-fidelity sim covers all

The Digital Discovery Gap

Medical device Training Directors and Clinical Affairs teams have fundamentally changed how they source vendors. They search Google and AI-powered tools (Perplexity, ChatGPT, Microsoft Copilot) for "bioskills lab Orange County," "cadaver lab medical device training California," and "surgical simulation facility for device launch." They expect to find facility photos, booking information, and outcome data online before picking up a phone.

The Invisible Leader

Axis Research & Technologies — the operator of four premium bioskills facilities, the developer of an AI surgical telemetry platform, and the partner in a landmark UMD joint venture — does not appear in the top search results for its own market.

This is not a product problem. It is a visibility problem. And it is fixable.

04 The AI Surgical Training Moment

The convergence of AI and surgical training is not a future trend — it is happening now, and Axis is ahead of the field. The OMNIMED SmartOR platform positions Axis as the only bioskills lab operator in the United States that can offer real-time AI performance analytics alongside traditional cadaveric training. This combination is the foundation of the UMD partnership and represents a category that competitors have not entered.

AI in medical education is reshaping how device companies, academic centers, and professional societies evaluate training partners. They are no longer asking just "can you train surgeons?" — they are asking "can you give us performance data, reproducible benchmarks, and outcome intelligence?" Axis can answer yes. Most competitors cannot.

Capability	Traditional Lab	Axis + OMNIMED SmartOR
Surgeon Training	Yes (cadaver, simulation)	Yes + AI performance tracking
Real-Time Performance Data	No	Yes — telemetry + analytics
Outcome Benchmarking	Subjective instructor assessment	Objective AI-generated metrics
Streaming & Recording	Basic AV	Global broadcast + archiving
Multi-Site Consistency	Varies by location	4 locations, unified SmartOR platform
Academic Partnership	Standalone	UMD joint venture — 36,000 sq ft

The strategic opportunity for Axis is twofold: first, ensure that OMNIMED SmartOR is visible and discoverable as a standalone product that medical device companies can request when evaluating training partners; second, use the UMD announcement as a content anchor to

establish Axis as the thought leader in AI-assisted surgical education — the company that defined the category.

The First-Mover Window

The UMD partnership announcement creates a 12-to-18-month window during which Axis can establish exclusive ownership of the "AI surgical training" narrative before a well-funded competitor enters the space.

A content and visibility strategy that begins now — before the facility breaks ground — positions Axis as the reference point that all future competitors are compared against.

05 Where the Growth Lives

Axis's growth lives across five distinct demand pools, each with a different buyer profile, time horizon, and Technijian activation path. Collectively these represent the full commercial opportunity — from near-term facility bookings to long-term platform licensing.

Pool 1: Medical Device Training Programs

The core revenue driver. FDA-regulated device manufacturers need hands-on surgeon training before, during, and after product launch. Axis's 4-location footprint, cadaver availability, and OMNIMED analytics make it the premium choice for companies launching class II/III devices. The buyer is the VP of Training & Education or Clinical Affairs Director. Target list: top 500 medical device companies in the US.

Pool 2: Academic Medical Center Partnerships

The UMD model is replicable. Academic medical centers nationwide lack the CapEx for world-class bioskills infrastructure — and they don't want it on their balance sheet. Axis can offer long-term facility partnerships (like UMD) that give institutions access to premium labs without capital expenditure. The buyer is the Dean, Department Chair, or CME Director. Each partnership is a multi-year recurring revenue relationship.

Pool 3: Continuing Medical Education (CME) Providers

Professional surgical societies and CME organizations (American College of Surgeons, specialty boards) need accredited hands-on training environments. They book facilities for annual courses, board preparation programs, and skills assessments. Axis's AV infrastructure, recording capabilities, and national footprint make it a natural CME venue. Relationships are long-term and repeat.

Pool 4: Corporate Conference & Product Launch Events

Medical device companies launch products in front of surgeons — in Axis facilities. These are high-value, high-margin bookings (conference space, AV, catering-adjacent logistics, live OR

demonstrations). The buyer is a corporate event planner or Marketing Operations director. These events drive word-of-mouth among surgeon faculty, which feeds Pool 1 in a flywheel.

Pool 5: OMNIMED SmartOR Technology Licensing

The long-term platform play. As AI-assisted surgical training becomes the standard of care, OMNIMED SmartOR becomes a licensable product that other simulation centers, academic medical centers, and hospital systems will want to deploy. This requires a dedicated product presence, a sales motion separate from facility bookings, and a technology roadmap that Technijian can support through My Dev and Managed App services.

Near-Term vs. Long-Term Priority

Pools 1-3 represent near-term bookable revenue — the fastest path from Technijian investment to Axis ROI. Pool 4 is an always-on event opportunity. Pool 5 is the strategic prize: a recurring software revenue stream that decouples growth from physical lab capacity.

06 Customer Map — Five Buyer Personas

Axis's buyer universe is account-based and finite. The following five personas represent the full decision chain from initial facility inquiry through multi-year partnership.

BUYER PERSONA MAP — AXIS RESEARCH & TECHNOLOGIES

Figure 2: Axis Research & Technologies — Buyer Persona Map

Persona 1: Medical Device Training Director

Role	VP or Director of Training & Education / Clinical Affairs at a medical device company
Volume	Low (100-300 companies need premium bioskills labs nationally)
Goal	FDA-compliant surgeon training at scale; performance data for regulatory documentation
Pain Points	Finding consistent lab capacity across multiple geographies; tracking surgeon performance; costly no-shows
Decision Driver	Facility quality, cadaver availability, OMNIMED performance analytics, national footprint
Technijian Activation	AI lead gen targeting top 500 device companies; SEO for "bioskills lab + city" queries; OMNIMED SmartOR product page

Persona 2: Clinical Affairs & Medical Education Lead

Role	Clinical Affairs Manager, Medical Science Liaison, Director of Medical Education
Volume	Medium (multiple contacts per device company)
Goal	Clinical evidence generation; reproducible training outcomes for scientific publications
Pain Points	Inconsistent lab environments; lack of objective performance data; documentation burden
Decision Driver	OMNIMED SmartOR analytics; lab standardization across 4 Axis locations; recording capabilities
Technijian Activation	Content marketing; white papers on AI-assisted surgical training outcomes; LinkedIn authority

Persona 3: Surgeon / Physician Faculty

Role	Attending Surgeon, Fellowship Program Director, Residency Program Coordinator
Volume	High (many surgeons pass through Axis facilities annually)
Goal	Realistic, high-fidelity training environment; CME credit; professional development
Pain Points	Limited OR time for resident training; simulation realism gaps; scheduling complexity
Decision Driver	Facility realism, cadaver quality, OMNIMED live feedback, convenience of location
Technijian Activation	Google reviews strategy; surgeon-facing testimonial content; social proof on LinkedIn

Persona 4: Healthcare Institution Partner

Role	Dean, Department Chair, CME Director at a medical school or hospital system
Volume	Low (strategic, high-value, multi-year relationships)
Goal	Expand training infrastructure without capital expenditure; national lab access for faculty

Pain Points	Building internal bioskills labs is cost-prohibitive; accreditation complexity
Decision Driver	Axis national footprint, OMNIMED SmartOR integration, academic credibility, UMD model
Technijian Activation	ABM outreach to top 50 US academic medical centers; partnership proposal templates

Persona 5: Medtech Corporate Event Planner

Role	Conference Manager, Marketing Operations, Product Launch Coordinator
Volume	Medium (device companies run 3-5 major training events per new product)
Goal	Impress surgeon faculty at product launch with premium, OR-adjacent experience
Pain Points	Standard hotel venues cannot accommodate live surgical demonstrations
Decision Driver	Axis conference space, AV capabilities, OR-adjacent prestige, national location options
Technijian Activation	Event-focused SEO ("medical device launch event space"); booking portal; conference package landing pages

07 Competitive Landscape

Axis occupies an uncontested corner of the medical training market. No single competitor combines all four of Axis's core advantages: national physical footprint, cadaveric and simulation capabilities, AI-powered performance analytics (OMNIMED SmartOR), and private commercial facility access (vs. academic-only institutions).

Figure 3: Competitive Landscape — AI Depth vs. Physical Lab Depth

Competitor	Strength	Limitation	Axis Advantage
CAE Healthcare	Large simulator catalog; strong brand in aviation-turned-medical	No cadaver / wet lab; simulation only; high cost	Cadaver + simulation + AI in one
Simbionix (3D Systems)	Haptic simulation; established in laparoscopy	Software-only; no physical lab; no analytics platform	Physical facility + OMNIMED data layer
Surgical Theater	VR surgical planning; pre-op visualization	No training lab; visualization not training	Real surgical environment + AI feedback

Competitor	Strength	Limitation	Axis Advantage
University Sim Centers	Institutional credibility; academic prestige	Not available to external commercial clients; limited capacity	Open to all commercial clients; 4 locations
Hospital Skills Labs	On-site convenience; existing relationships	Single hospital only; no AI; not commercially bookable	National footprint; commercially accessible
Independent Cadaver Labs	Low cost; accessible	No AI, no analytics, no standardization, no national scale	OMNIMED + scale + national consistency

Uncontested Corner

Axis Research & Technologies: 4-location national footprint + cadaveric training + high-fidelity simulation + OMNIMED SmartOR AI analytics + private commercial access + UMD academic partnership.

No competitor holds this combination. The strategic priority is making this fact visible to the 3,000 FDA-regulated medical device manufacturers who are searching for exactly this capability.

08 Brand & Digital Presence Audit

Axis's brand credibility — built through 10 years of serving the medical device industry, a landmark UMD partnership, and the development of OMNIMED SmartOR — is not matched by its digital presence. The gap between operational excellence and online visibility represents the fastest recoverable growth opportunity available.

Channel	Current State	Gap / Opportunity
Website (axisrt.com)	Functional but minimal; no blog, no case studies, no SEO content strategy	Invisible for high-intent search queries from Training Directors
LinkedIn	43 followers — critically low for a \$11M medtech brand	Peers in this space have 1,000-10,000 followers; thought leadership is table stakes
Google Business Profile	Not found for Irvine or other locations	Device company buyers search "bioskills lab near me" and find competitors
OMNIMED SmartOR	No dedicated landing page; no product search presence	A genuine AI product with no digital home — invisible to buyers searching for AI surgical tools
Content / PR	UMD partnership press release exists on PR Newswire; no owned follow-up content	One press release is not enough; Axis needs ongoing content to own the "AI surgical training" search category
Review / Social Proof	No visible Google reviews, Trustpilot, or testimonials	Surgeon faculty recommendations carry enormous weight; they need to be captured and published

The Opportunity Calculus

A Training Director at a major medical device company evaluating bioskills labs for their next product launch will typically spend 20-30 minutes on Google before making a single phone call. If Axis does not appear in that search journey — across organic search, Google Maps,

LinkedIn, and AI-powered discovery tools — the call never happens, and the booking goes to a competitor who has invested in digital visibility.

This is not a branding problem. It is an infrastructure problem — one that Technijian is specifically designed to solve for healthcare technology companies at Axis's stage.

09 Technijian Capability Proof

Technijian brings direct experience helping healthcare and technology organizations bridge the gap between operational excellence and commercial growth. The following five engagements are directly relevant to the challenges Axis faces today.

Build 1: AI Lead Generation for a Healthcare Services Firm

What Technijian Built: Designed and deployed a My AI Lead Gen Pro system targeting named accounts in a B2B healthcare services market. Built persona-specific outreach sequences, intent signal monitoring, and CRM pipeline integration. First qualified leads within 45 days.

How This Applies to Axis: Axis's buyer universe (3,000 FDA-regulated device manufacturers) is perfectly suited for account-based AI outreach. We can build a named-account intelligence system that identifies device companies with active training needs — before they post an RFP.

Build 2: SEO & GEO Authority for a Multi-Location Medical Services Business

What Technijian Built: Executed a 12-month SEO and Generative Engine Optimization (GEO) program for a multi-location healthcare services business. Achieved top-3 organic rankings for high-intent local queries and established AI-tool citation presence (Perplexity, ChatGPT, Copilot).

How This Applies to Axis: Axis's four locations each need individual Google Business Profiles, local SEO optimization, and content that ensures AI search tools recommend Axis when Training Directors ask "where can I find a bioskills lab in Houston?" or "best surgical simulation facility in Maryland?"

Build 3: AI Executive Workshop for a Technology Company Leadership Team

What Technijian Built: Facilitated a full-day AI strategy workshop for a C-suite team at a mid-market technology company. Delivered a prioritized AI roadmap, use-case scoring matrix, and 90-day quick-wins plan aligned to their specific revenue model.

How This Applies to Axis: The Axis leadership team — Nick Moran and Jill Goodwin — is at a strategic inflection point. A half-day AI workshop would translate the high-level OMNIMED SmartOR vision into a concrete commercial roadmap, identifying which AI investments generate bookings in the next 90 days vs. the next 2 years.

Build 4: Online Booking & CRM Integration for a Multi-Location Service Business

What Technijian Built: Built a custom booking portal integrated with an existing CRM, replacing a phone-only scheduling model. Reduced booking friction by 60%, increased lead capture by 40%, and provided real-time facility utilization dashboards.

How This Applies to Axis: Axis currently operates on phone and email booking for all four locations. A unified online booking system — allowing Training Directors to check cadaver availability, select dates, and request OMNIMED SmartOR configuration — would eliminate a major conversion barrier and provide Axis management with cross-location pipeline visibility.

Build 5: Managed IT & Cybersecurity for a Healthcare Data Organization

What Technijian Built: Deployed unified endpoint management, HIPAA-aligned data governance, and secure cloud backup across a distributed healthcare organization. Established incident response procedures and vendor-agnostic monitoring.

How This Applies to Axis: Axis's four locations handle sensitive medical data — cadaver provenance documentation, surgeon performance records, OMNIMED SmartOR telemetry. A HIPAA-aligned IT infrastructure ensures that this data is protected, compliant, and available for the kind of outcome reporting that device company clients and academic partners require.

10 The Axis AI Growth Engine

The Axis AI Growth Engine operates across three interdependent motions. Each motion is designed to work independently in the short term and compound together over 12 months. The goal is a self-reinforcing system: better visibility brings more inbound leads, better outreach wins more named accounts, and stronger technology infrastructure supports both.

THE AXIS AI GROWTH ENGINE — THREE MOTIONS

Figure 4: The Three-Motion Axis AI Growth Engine

Motion 1: Get Found — Digital Visibility for Medtech Buyers

The immediate priority is ensuring that when a Training Director, Clinical Affairs lead, or CME Director searches for a bioskills facility — on Google, LinkedIn, or an AI-powered tool — Axis is the first result they encounter. This requires four parallel initiatives:

- SEO content targeting "bioskills lab [city]," "cadaver lab medical device training," "surgical simulation facility," and "OMNIMED SmartOR" as a standalone product search term
- Google Business Profile creation and optimization for all four Axis locations, with facility photos, service descriptions, and surgeon/client review solicitation

- GEO optimization — ensuring that AI-powered search tools (Perplexity, ChatGPT, Microsoft Copilot) cite Axis when users ask for surgical training facility recommendations
- LinkedIn content authority: facility showcases, OMNIMED case studies, UMD partnership updates — from 43 followers to 1,000+ within 6 months

Motion 2: Win Clients — Account Intelligence for the Top 500

Axis's buyer universe is finite and known: approximately 3,000 FDA-regulated medical device manufacturers operate in the US, and the top 500 by revenue represent 80%+ of the bioskills training market. Technijian's My AI Lead Gen Pro platform will:

- Build a priority target list of the 500 device companies most likely to need bioskills lab access in the next 12 months, scored by device pipeline activity, recent FDA clearances, and hiring signals (Training Director job postings)
- Deploy AI-personalized outreach to Training Directors and Clinical Affairs Managers — not generic cold email, but messages that reference specific device launches, therapeutic areas, and training requirements relevant to that company
- Generate institutional partnership proposals for the top 25 academic medical centers that have no bioskills lab of their own, following the UMD model
- Build a RFP response library so Axis can respond to formal training vendor evaluations in hours, not weeks

Motion 3: Scale & Serve — Technology Infrastructure for 4 Locations + OMNIMED

Axis's operational infrastructure needs to match its commercial ambition. A company building the nation's first AI-powered surgical performance center cannot operate on phone-based booking and location-by-location IT. Technijian will:

- Deploy a unified online booking portal for all four Axis facilities — real-time cadaver availability, lab configuration options, OMNIMED SmartOR add-on request, and automated confirmation workflows

- Establish HIPAA-aligned data governance across all four locations — protecting surgeon performance records, cadaver documentation, and OMNIMED telemetry data
- Build a cross-location CRM and deal pipeline that gives Axis management full visibility into bookings, recurring clients, and revenue forecasting
- Support OMNIMED SmartOR with dedicated IT infrastructure — secure cloud architecture, streaming reliability, and data backup aligned to FDA documentation requirements

11 Business Impact & Service Investment

Technijian's engagement with Axis is structured as a land-and-expand model: a focused entry investment in Year 1 that generates measurable ROI, followed by a full platform build once the growth engine is validated. All pricing is based on published Technijian service rates. ROI projections are illustrative estimates — exact contract values should be confirmed with the Axis team.

Entry Phase — Year 1 (~\$35K)

Service	Description	Investment
My SEO — Health Tech Authority (Tier 2)	SEO + GEO for all 4 locations; OMNIMED SmartOR product page; Google Business Profiles	\$1,499/mo = \$17,988/yr
My AI Executive Workshop	Half-day session: AI roadmap, use-case scoring, 90-day quick-wins plan for Nick Moran + Jill Goodwin	\$5,000 one-time
My AI Fractional Advisor — Starter	Monthly strategy sessions: AI growth roadmap, content strategy, outreach review	\$1,000/mo = \$12,000/yr
Nexus Assess (Complimentary)	IT audit: all 4 locations, OMNIMED infrastructure, data governance gaps	Included
TOTAL ENTRY — YEAR 1		~\$34,988

Full Engine — Year 1 (~\$136K)

Service	Description	Investment
Entry Phase (above)	SEO + Workshop + Advisor	\$34,988
My AI Lead Gen Pro	Named-account outreach to top 500 device companies; institutional partnership proposals	\$3,499/mo = \$41,988/yr

Service	Description	Investment
Advisor Upgrade	Weekly sessions; full growth engine management	+\$1,000/mo = \$12,000/yr
My Dev — Booking Portal + CRM	Online booking system for all 4 locations; cross-location pipeline dashboard	\$42,000 project
Managed App Services	Ongoing OMNIMED infrastructure support; HIPAA-aligned backup + monitoring	\$800/mo = \$9,600/yr
TOTAL FULL ENGINE — YEAR 1		~\$140,576

Illustrative ROI Model

Axis's average multi-day bioskills training program for a medical device company ranges from \$15,000 to \$75,000 depending on scope, cadaver requirement, and lab configuration. A single new device company relationship typically generates \$30,000-\$150,000 in annual bookings. The figures below are illustrative estimates — to be confirmed with the Axis team.

Scenario	Assumption	Est. Revenue Added	ROI vs. Entry
Entry — Conservative	1 new medical device company client (\$35K avg annual bookings)	\$35,000	~1.0×
Entry — Expected	2-3 new device company clients (\$35K avg)	\$70,000–\$105,000	~2.0×–3.0×
Full Engine — Expected	5-6 clients + 1 institutional partner + OMNIMED licensing leads	\$175,000–\$350,000+	~3.5×–4.5×

Note: All contract value figures are illustrative estimates based on industry norms. Actual ROI depends on Axis average booking values, conversion rates, and OMNIMED SmartOR licensing terms — to be confirmed in the calibration conversation.

12 Implementation Roadmap

The 365-day roadmap is organized in three phases: Foundation (establishing the visibility and intelligence infrastructure), Acceleration (activating outbound lead generation and booking systems), and Full Engine (scaling platform capabilities for the UMD facility and OMNIMED SmartOR product growth).

IMPLEMENTATION ROADMAP — 90 / 180 / 365 DAYS

Days 1–90 Foundation	WEEK 1 Nexus Assess: audit all 4 locations IT + digital footprint	WEEK 2–3 SEO baseline + Google Business Profiles live for all 4 locations	WEEK 3–4 Exec AI Workshop with Nick Moran + Jill Goodwin
	MONTH 2 OMNIMED SmartOR landing page + product SEO live	MONTH 2 LinkedIn content calendar launch: case studies + facility showcase	MONTH 3 First medtech account list (top 100 device companies): outreach begins
Days 90–180 Acceleration	MONTH 4 AI Lead Gen: automated outreach to Training Directors at top device cos	MONTH 4 Online booking portal v1 live for lab reservations	MONTH 5 First qualified medtech leads entering pipeline from SEO + outreach
	MONTH 5 HIPAA-aligned data governance framework + OMNIMED cloud backup	MONTH 6 CRM pipeline tracking: all 4 locations, deal visibility	MONTH 6 Quarterly performance report: lab bookings, SEO rankings, leads
Days 180–365 Full Engine	MONTH 7–8 Expand outreach to institutional partners (medical schools, hospitals)	MONTH 8 OMNIMED SmartOR product site + lead capture for technology licensing	MONTH 9 UMD Smart Surgical Center: IT infrastructure planning support begins
	MONTH 10 Content authority: Axis recognized as thought leader in surgical AI	MONTH 11 2nd-generation lead gen: referral program for surgeon faculty network	MONTH 12 Annual review: ROI validation, Phase 2 scope for UMD facility build

Figure 5: 90 / 180 / 365-Day Implementation Roadmap

Phase 1 — Foundation (Days 1-90)

- Nexus Assess: Full IT and digital audit across all 4 Axis locations — baseline for all growth work
- Google Business Profiles live for Irvine, Columbia, Nashville, and Houston locations
- SEO baseline audit and priority keyword list for bioskills, surgical simulation, and OMNIMED SmartOR
- Exec AI Workshop delivered to Nick Moran and Jill Goodwin — AI roadmap and 90-day quick-wins plan

- OMNIMED SmartOR product landing page live: dedicated URL, product description, demo request form
- LinkedIn content calendar launched: facility photos, surgeon testimonials, UMD partnership updates

Phase 2 — Acceleration (Days 90-180)

- My AI Lead Gen Pro activated: top 500 device company outreach begins, personalized by therapeutic area and device pipeline
- Online booking portal v1 live for lab reservations — real-time availability, configuration selection, automated confirmation
- First qualified inbound leads from SEO + Google Business Profile optimization
- HIPAA-aligned data governance framework deployed across all 4 locations
- CRM pipeline integration: all Axis bookings and leads visible in one dashboard for management
- Quarterly performance review: rankings, leads generated, bookings influenced, revenue attribution

Phase 3 — Full Engine (Days 180-365)

- Expand outreach to top 50 academic medical centers — institutional partnership proposal pipeline
- OMNIMED SmartOR product site v2: pricing tiers, case studies, tech specs for licensing conversations
- UMD Smart Surgical Center: IT infrastructure planning initiated in coordination with Axis facilities team
- Content authority established: Axis recognized as reference source in "AI surgical training" category
- Second-generation lead gen: surgeon faculty referral network activation
- Annual review: ROI validation, Phase 2 scope definition, UMD facility build IT engagement

13 Quick Wins — Six Actions This Week

Six actions Axis can take immediately, with no Technijian engagement required, that will produce measurable results within 30 days:

#	Action	Who Owns It	Expected Outcome
1	Claim and complete Google Business Profiles for all 4 Axis locations (Irvine, Columbia, Nashville, Houston)	Axis Marketing / Admin	Immediate local search visibility; appears in Google Maps for "bioskills lab near me"
2	Write a single LinkedIn post about the UMD AI Smart Surgical Center partnership — include facility photo	Nick Moran or Jill Goodwin	First signal to LinkedIn algorithm; foundation for content authority
3	Request 5 Google reviews from surgeon faculty who have used Axis facilities in the last 12 months	Axis team / relationship owners	Social proof for inbound Training Directors doing vendor research
4	Create a dedicated page on axisrt.com for OMNIMED SmartOR with a demo request form	Axis web team	First organic traffic to the product; first captured leads for technology licensing
5	Add "AI-Powered Surgical Training OMNIMED SmartOR" to LinkedIn company tagline and website header	Axis Marketing	Immediate category ownership signal in organic and AI-powered search
6	Send a one-paragraph follow-up to the top 10 medical device clients who used Axis in the last 6 months — mention OMNIMED SmartOR upgrade capabilities	Nick Moran / Jill Goodwin	Reactivation of warm relationships; pipeline for upsell on OMNIMED analytics

14 Questions to Calibrate

The following seven questions would allow Technijian to sharpen the growth strategy and price ROI projections with real Axis data rather than industry estimates. None are required before beginning — they are discussion topics for a calibration call.

#	Question	Why It Matters
1	What is the average revenue per medical device company booking (multi-day program)?	Anchors the ROI model with real numbers vs. industry estimates
2	How many active medical device company clients does Axis serve today, and what is the repeat booking rate?	Defines the base for upsell vs. new client acquisition priority
3	Is OMNIMED SmartOR currently licensed to any external parties, or is it exclusively used within Axis facilities?	Determines whether a technology licensing revenue stream is near-term or longer-term
4	Which location has the highest utilization rate? Which has the most unused capacity?	Targets marketing investment at the locations with the best ROI on new bookings
5	Has Axis received inbound inquiries from academic medical centers (beyond UMD) seeking facility partnerships?	Sizes the institutional partnership pipeline and validates Pool 2
6	Does Axis currently have a CRM or deal tracking system? How are bookings managed across locations today?	Scopes the My Dev booking portal and CRM integration project
7	What does Axis's current digital marketing and IT budget look like, and who internally owns those functions?	Ensures Technijian's scope complements existing capacity without duplication

15 What Happens Next

This blueprint is a starting point, not a proposal. The next step is a 30-minute calibration call to discuss which sections resonate, what the Axis team is already working on, and where the biggest growth bottleneck sits today. From that conversation, Technijian will produce a scoped engagement proposal with exact deliverables, timelines, and investment.

Three Ways to Start

1. Review the blueprint internally and share with Jill Goodwin and any other stakeholders who should weigh in on growth strategy.
2. Schedule a 30-minute calibration call (calendar link in Ravi's signature). No prep required — just bring your priorities.
3. Start with one Quick Win (Section 13) this week. Axis can see results from zero investment before any engagement begins.

Technijian is not a generic IT vendor. We work with a small number of healthcare technology and professional services companies each year, and every engagement is led personally by Ravi Jain. We do not hand off to junior account managers. If we take on Axis as a client, it is because we believe we can make a material difference in your commercial trajectory — and we are prepared to prove that in the first 90 days.

Ravi Jain, CEO — Technijian

16 About Technijian

Technijian is a technology management and AI growth company headquartered in Irvine, California, with a delivery center in Panchkula, India. Founded and led by Ravi Jain (CISSP-certified), Technijian serves a select portfolio of mid-market businesses across Southern California and nationally, combining managed IT services with AI-driven marketing and business development systems.

Our work spans three categories: building and managing IT infrastructure that organizations depend on daily; deploying AI systems that generate qualified leads, automate outreach, and create content authority; and developing custom software that removes operational friction and scales revenue without adding headcount.

Service Area	What We Do	Relevant to Axis
My SEO + GEO	Search engine and AI-tool optimization for healthcare and technology organizations	Axis digital visibility across all 4 locations + OMNIMED SmartOR
My AI Lead Gen	Account-based AI outreach systems targeting named accounts by firmographic and intent data	Top 500 medical device company outreach
My AI Advisor	Fractional AI strategy: roadmap, implementation sequencing, performance review	Growth strategy for Nick Moran and Jill Goodwin
My Dev	Custom web and application development: booking portals, CRM integrations, dashboards	Axis booking portal + cross-location pipeline CRM
Managed IT / Nexus	IT management, cybersecurity, HIPAA-aligned data governance, cloud backup	OMNIMED SmartOR infrastructure + 4-location IT unification
AI Executive Workshop	C-suite AI strategy session: roadmap, use-case scoring, 90-day plan	Nick Moran + Jill Goodwin: AI growth roadmap
