2022

CUSO Launched

\$350M+

Originations in Under 3
Years

10,000+

New Credit-Union
Members

5 → 20+

States, Today to Planned

VIA Auto Finance is a Credit Union Service Organization. It originates, underwrites, and prices prime and near-prime auto loans through car dealerships, and its partner credit union, American Heritage, funds and services them while the borrower becomes a member. In under three years that model has produced more than \$350 million in originations and roughly ten thousand new members, and VIA is now expanding from five states toward twenty-plus and recruiting additional credit-union partners onto the platform.

VIA's growth comes down to a simple equation: more dealers, more funded loans per dealer, and a protected return for the credit union that funds it all. The structural advantage is real. Because the loans are funded by credit-union deposits, VIA carries a cost-of-capital edge that the independent finance companies and the venture-backed fintechs simply do not have. The gap is operational, not financial: dealers now choose a lender on funding speed, not rate, and VIA is still largely manual, with no public dealer portal and no AI in the workflow.

This blueprint is a focused, account-based program with three moves: win more dealers (AI account intelligence that prioritizes the right rooftops and captures the relationships competitors are abandoning), fund faster and safer (document verification and fraud screening that turn days into minutes and protect the credit union's return), and protect and scale (explainable, audit-ready compliance plus the platform credibility to bring on the next credit-union partner). It is deliberately account-based, because VIA already knows who its targets are, and there is no consumer marketing in it.

The Core Opportunity

VIA's credit-union deposit funding is a cost-of-capital moat no independent or fintech rival has — but dealers now choose on funding speed, and VIA is still manual. Pair the moat with AI funding-speed and VIA owns a corner no one else can reach.

Growth is gated by dealer count. AI account intelligence multiplies a finite field team across the 20-state expansion — and competitor retrenchment (Prestige, Truist, the Tricolor collapse) is freeing up dealer relationships right now.

Every play protects the relationship that funds everything — the credit union's return — through faster, cleaner, fraud-screened, and explainable originations. That protection is what grows the program's capacity and brings on the next CU partner.

A note on figures: VIA's internal metrics (active dealer count, annual origination run-rate, time-to-fund, and the CUSO's per-loan economics) were not available for this draft. Every projection below is labeled estimated and conservative, and calibrates to real numbers after a short discovery call — the specific questions are in Section 14.

02 The Business Model — A Credit-Union-Backed CUSO

Any growth plan for VIA has to start with how the business actually works, because the structure is unusual and it drives everything. VIA is not a balance-sheet lender. It is the dealer-acquisition, origination, and underwriting engine; American Heritage Credit Union is the balance sheet and the servicer. A dealer submits a deal, VIA originates and prices it, the loan is awarded to the credit union, the credit union funds and services it, and the borrower becomes a member. VIA earns CUSO economics on each loan; the credit union gains higher-return auto assets and new members.

The CUSO Model - Three Parties, One Loan

VIA originates and underwrites; American Heritage Credit Union funds and services; the borrower becomes a member.

VIA earns CUSO economics on each loan; the credit union gains higher-ROA auto assets and new members.

Where Technijian AI plugs in

dealer acquisition - stip & income verification - fraud & synthetic-ID screening - explainable decisioning - GLBA compliance

Figure 2.0 — The CUSO model: VIA originates and underwrites, the credit union funds and services, the borrower becomes a member

Two Customers, Not One

The non-obvious consequence is that VIA has two customers it must win and keep, and a growth program has to serve both:

- The dealer, who sources the paper. VIA wins dealers with fast approvals, workable near-prime structures, and reliable funding — a relationship driven by a field-sales team.
- The funding credit union, which puts up the capital and services the loan. VIA keeps it by delivering return, clean credit quality, member growth, and airtight compliance — which is also what makes the program worth expanding and what attracts the next credit-union partner.

What VIA Already Does Well

The CUSO is built on real strengths, each of which gets sharper with AI behind it:

- A credit-union deposit funding base — a lower cost of capital than the independents that depend on the asset-backed-securities market, whose subprime spreads widened after the 2025 Tricolor collapse.
- A prime and near-prime focus — the safer side of a market seeing record subprime delinquency — with customized underwriting designed alongside the credit union's risk team.
- A seasoned, experienced field-sales team driving dealer relationships market by market.
- A proven, repeatable platform — \$350 million originated and ten thousand members created — that can be offered to additional credit unions.

The Funding Moat Is the Whole Game

Credit-union deposit funding gives VIA a cost-of-capital advantage that the venture-backed fintechs and the ABS-dependent independents cannot match. That is a durable, structural edge.

But a funding edge only converts to dealer share if VIA can fund fast and clean. Today the moat is real and the operations are manual — so the edge is not yet showing up at the dealer.

The entire thesis of this blueprint is to convert the funding moat into dealer share by adding AI funding-speed on top of it — without taking on credit or compliance risk the credit union cannot defend.

03 The Growth Equation

VIA grows three ways, and only three ways: it signs more dealers, it funds more loans per dealer, and it protects the credit union's return so the program can keep expanding. Each lever is gated by something operational today, and each is squarely addressable with AI. This is the spine the rest of the plan hangs on.

Growth Lever	What Moves It	The AI Play
More dealers	A finite field team can only call on so many rooftops; the 20-state expansion needs prioritization	Account intelligence scores and ranks the dealers worth recruiting; triggers flag competitor retrenchment
More loans per dealer	Dealers send deals to whoever funds fastest and cleanest; slow steps and manual decisions lose deals	Document verification and instant decisioning clear deals in minutes, lifting capture at every dealer
Protected return	The credit union keeps funding (and adds capacity) only if return, credit quality, and compliance hold	Fraud screening, explainable underwriting, and portfolio early-warning protect return and credit quality

Why the Equation Favors VIA Now

The market is consolidating in VIA's favor: as competitors retrench (Prestige stopped new originations, Truist pulled back, Tricolor collapsed), dealer relationships are up for grabs for a disciplined lender that can move.

The credit-union channel is winning — credit unions have been the number-one auto originator by units for five straight years — and the channel now competes on speed, accuracy, and predictability, not rate. That is exactly the lane AI improves.

Each protected, well-run loan strengthens the case for the next credit-union partner — turning operational excellence into a platform-expansion engine.

04 Industry & Regulatory Landscape

Two forces shape the next few years for an indirect auto lender, and both favor the disciplined, well-funded operator that modernizes first. The market is under affordability and credit pressure even as the credit-union channel gains share; and the regulatory environment is heavy — which is both the burden AI removes and the constraint AI must respect.

Market Forces (2024–2026)

Force	What's Happening	Implication for VIA
Affordability pressure	New-vehicle prices topped \$50,000 and average payments passed \$750/month	Near-prime borrowers are stretched — disciplined underwriting and verification matter more than ever
Record delinquency	Subprime 60-plus-day delinquency hit a multi-decade high in 2025	VIA's prime / near-prime focus is the safer side — but the funding CU's return depends on clean credit and fraud control
Consolidation & retrenchment	Competitors pulled back or failed (Prestige, Truist, the Tricolor collapse)	Dealer relationships are up for grabs — a direct case for dealer-acquisition account intelligence
The credit-union channel wins	Credit unions are the #1 auto originator by units; the channel competes on speed, not rate	VIA's exact lane is winning — the constraint is operational friction, which AI removes
Fintech encroachment	Digital lenders compress deal time 50–70% and reset dealer expectations	Dealers increasingly expect instant, document-light decisions — VIA has to match the bar
Fraud at record exposure	Industry fraud exposure reached an estimated \$10.4 billion; income misrepresentation is the largest share	Fraud and synthetic-identity screening directly protect the credit union's return

The Regulatory Frame — Burden and Constraint

Lending is heavily regulated, and a lender will judge a technology partner on regulatory fluency. Most of the load is recurring, rules-based documentation that AI automates well — but one area, credit underwriting, is where AI must be handled carefully.

Regulation	The Recurring Burden	AI Angle
ECOA / Reg B	Specific, accurate adverse-action reasons on every denial; fair lending	Auto-generate compliant reason codes — only with an explainable model (see below)

Regulation	The Recurring Burden	AI Angle
TILA / Reg Z	Accurate APR and finance-charge disclosures on every contract	Document generation with automated disclosure validation and audit trail
FCRA	Permissible purpose, risk-based-pricing and adverse-action notices	Automated, accurate notice generation and dispute handling
GLBA + FTC Safeguards Rule	A written information-security program; 30-day breach notification	Security monitoring, access controls, incident detection — Technijian's core security lane
SCRA / Military Lending Act	Active-duty rate caps and repossession protections	Automated military-status checks and rate / repo guardrails
State licensing & rate caps	A 45-state-plus patchwork of rate and term limits	A geo-aware rate-and-term rules engine with audit logging

The Constraint We Lead With: Explainable, Never a Black Box

Any AI that touches a credit decision must be explainable and adverse-action-ready. ECOA and Reg B require specific, accurate reasons for a denial — and regulators have been explicit that a model being "too complex or novel" is not an excuse.

Fair-lending exposure is narrowing federally but is not gone: the statute still applies, and state attorneys general are actively enforcing — one settled a fair-lending action over an AI underwriting model in 2025.

So we lead with the constraint: Technijian deploys explainable, documented, bias-tested models — or automates the verification and compliance layer around VIA's existing scorecards — so VIA gets the speed and return upside without un-defendable risk.

05 Where the Growth Lives

The growth equation points to a finite, nameable set of accounts — which is why this is an account-based program, not a marketing campaign. VIA's next dollar comes from four pools, and the field team already knows most of the names. The job of AI is to find the right ones

faster, win them with a better experience, and free the team to cover twenty states instead of five.

Growth Pool	Who / What	How VIA Captures It
Net-new dealers	Franchised and independent rooftops not yet sending VIA deals, especially in expansion states	Account intelligence ranks targets by volume and credit mix; triggers flag competitor exits
Deeper share at existing dealers	Dealers already on board who send only a fraction of their near-prime deals	Faster funding and instant decisions lift capture — the lender that funds fastest gets the next deal
Additional CU partners	Other credit unions that want indirect-auto growth but lack the engine	A proven, modern, compliant platform story plus the data to prove return
Geographic expansion	The move from five states toward twenty-plus	Account intelligence and a modern submission experience let a finite team cover far more ground

Account-Based by Design — No Consumer Marketing

VIA does not transact with consumers; the borrower comes through the dealer and becomes a credit-union member. So this program is aimed entirely at named dealers and credit-union partners — not a broad consumer funnel, and not refinance marketing.

That is the honest framing: VIA already knows who its targets are. The value of AI is depth, speed, and timing on those named accounts, and the reach to pursue more of them across the expansion.

It also means the field-sales relationship stays central. AI surfaces and arms; the rep and the credit union's risk team still close and fund the business.

06 The VIA Customer

VIA's accounts span two sides: the dealers that source the paper and the credit union that funds it. The end borrower matters — their credit quality and experience protect the

program — but they are reached through the dealer, not marketed to directly. The cards below profile the buyers and stakeholders that a growth program has to win, and the matrix places each by origination-volume potential and strategic value to the CUSO.

1 — The Multi-Rooftop Dealer Group

Role	A finance director or principal across several dealership rooftops — the highest-volume accounts VIA can win.
Pain Points	Needs consistent, fast funding across every store; juggles many lenders; a slow lender quietly loses the group's deals.
Decision Driver	Speed and consistency across all rooftops, and a near-prime partner that funds clean deals without drama.
AI Opportunity	Account intelligence flags these groups as top targets; instant decisions and fast stip clearing make VIA the easy default.
Technijian Hook	My AI Lead Gen — prioritize and win multi-rooftop groups. My Dev — instant-decision portal and integration.

2 — The Franchised / Independent Dealer Principal

Role	The owner or general manager who decides which lenders the store sends its near-prime deals to.
Pain Points	Loses customers when a lender is slow or says no; wants a dependable near-prime "yes" with workable structures.
Decision Driver	A lender that approves more near-prime deals, funds fast, and is genuinely easy to work with.
AI Opportunity	Dealer-facing authority content and a fast, modern submission experience win and hold the relationship.
Technijian Hook	My SEO — dealer-facing authority content. My Dev — dealer portal plus RouteOne / Dealertrack integration.

3 — The F&I Manager

Role	Runs the finance desk; submits deals and structures financing with the customer sitting across the desk.
-------------	--

Pain Points	Manual stip chasing, slow decisions, and re-submissions — every minute of delay risks losing the sale.
Decision Driver	Instant decisions, multiple structures per approval, and stipulations cleared in seconds, not days.
AI Opportunity	Verification automation clears documents in seconds and an instant-decision experience keeps the deal moving.
Technijian Hook	My Dev — document / income verification and the instant-decision portal experience.

4 — The Independent Used-Car Dealer

Role	A smaller independent rooftop — opportunistic volume, often underserved by the bigger lenders.
Pain Points	Wants reliable near-prime coverage and a lender that actually shows up for a smaller store.
Decision Driver	Dependability — a lender that funds reliably and treats a small dealer like it matters.
AI Opportunity	Account intelligence finds and prioritizes the independents worth recruiting in each new state.
Technijian Hook	My AI Lead Gen — territory-level dealer discovery and prioritization.

The Funding Side & The Scale Lever

5 — The Funding Credit Union (American Heritage)

Role	The credit union that funds, books, and services every loan — the relationship that makes the CUSO work.
Pain Points	Needs return, clean credit quality, member growth, and airtight compliance to justify growing the program.
Decision Driver	Originations that are fast, well-underwritten, fraud-screened, and fully compliant — so the program is worth expanding.
AI Opportunity	Fraud screening, explainable underwriting, and portfolio early-warning protect return and credit quality — which grows capacity and brings on more partners.
Technijian Hook	My AI — fraud detection, explainable decisioning, portfolio analytics. My Security — GLBA compliance.

6 — The Prospective CU Partner	
Role	Other credit unions VIA wants to recruit onto the CUSO platform — the lever that scales toward twenty-plus states.
Pain Points	Want to grow indirect auto and membership but lack the dealer network, the origination engine, and the technology.
Decision Driver	A proven, turnkey, compliant platform with a track record — the \$350 million and ten-thousand-member proof.
AI Opportunity	A credible, modern, compliant platform story — with the data to prove return — is what recruits the next partner.
Technijian Hook	My SEO — the platform credibility story. My AI and My Security — the analytics and compliance that de-risk a new partner.

Figure 6.0 maps each account by origination-volume potential and strategic value to the CUSO — showing which are the anchor accounts, which are the strategic scale levers, and which represent recurring volume.

Figure 6.0 — VIA Accounts: Origination Volume Potential vs. Strategic Value to the CUSO

07 Competitive Landscape

VIA competes against three kinds of rival: the near-prime independents and credit-union platforms in its own lane, the deep-subprime independents that show what scale and operational AI look like, and the AI-native players that set the modern bar for decisioning. The pattern across all of them is the opportunity — none pairs VIA’s credit-union funding advantage with genuine AI-driven funding speed.

Competitor	Lane	Posture vs. VIA
Open Lending	AI decisioning + default-insurance platform for banks & credit unions	The closest channel analog — powers CU-funded near-prime decisioning; the standard VIA’s funding CU will expect VIA to match
Upstart	AI underwriting marketplace; loans originated by bank / CU partners	The model benchmark — instant, document-light, fair-lending-aware decisioning
Global Lending Services	Near-prime / subprime indirect, PE-backed, fast-growing	Strong dealer-facing instant decisioning and real-time deal structuring — a direct experience comparison
Westlake Financial	Full-spectrum independent; the largest privately held	The operational-AI benchmark — automates ~70% of loan documents and funds in under an hour
Lobel Financial	Anaheim, CA — all-tier indirect; a local neighbor	Already runs a dealer portal with instant approvals and Dealertrack / RouteOne integration — the table-stakes bar
Consumer Portfolio Services	Irvine, CA subprime; a local public lender	A same-size-class AI adopter (automated income / stipulation clearing) — proof the playbook works
Veros Credit	Santa Ana, CA near-/sub-prime; a neighbor	Recently took outside investment specifically to upgrade its technology — a peer that just admitted it must modernize
Exeter Finance	National subprime independent; branch-based	Scale and PE backing, but a relationship / branch model that is less automated — beatable on speed

Funding & Automation Scorecard

Reduced to the two things that decide dealer share — cost of capital and funding speed — the picture is clear, and it shows VIA holding the one advantage that is hardest to copy.

Player	Funding-Cost Edge	Instant Decisioning	AI / Automation	Verdict
Open Lending / Upstart	Medium	Yes	Native	AI-native benchmark
Westlake	Medium	Yes	Strong	Operational-AI leader
Global Lending / Lobel	Medium	Yes	Some	Modern dealer UX
Veros / Exeter	Low-Med	Partial	Upgrading	Modernizing / laggard
VIA (today)	High	Manual	None	Funding moat, manual ops

Figure 7.0 plots the field on those two axes. VIA sits where no rival does — the strongest funding-cost position, but below the field on automation. The move is straight up: keep the funding moat, add the AI funding-speed.

Figure 7.0 — Competitive Positioning: Funding-Cost Advantage vs. Origination Speed & AI Automation

Where VIA Wins — The White Space

The top-right corner — a funding-cost moat paired with AI-driven funding speed — is empty. The AI-native players do not have VIA's deposit funding; the funded independents do not have VIA's cost of capital. VIA can hold a corner neither can reach.

Operational friction is the real constraint on indirect growth — and it is exactly what document verification and instant decisioning remove. The lender that funds fastest and cleanest gets the next deal.

Dealer relationships are up for grabs as competitors retrench, and account intelligence captures them. Meanwhile two local neighbors — Lobel with a dealer portal and CPS with automation — show the bar VIA can clear and exceed.

08 Brand & Digital Presence Audit

For a CUSO that has originated more than \$350 million and created ten thousand members, the digital presence materially under-represents the operation — and that matters when the audiences VIA needs to impress are dealers deciding where to send deals and credit unions deciding whether to partner.

Digital Asset	Current State	Gap / Opportunity
Website	A small, dated brochure site (Home / About / For Dealers / Why Partner / For Borrowers)	Thin content and an aging build undercut credibility with dealers and prospective CU partners
Dealer portal	No public dealer-portal login or self-serve submission shown	No modern, instant-decision submission experience — the single clearest gap versus Lobel and GLS
Lender integrations	No stated RouteOne / Dealertrack / CUDL integration	Table stakes for indirect lending — dealers expect to submit where they already work
Content / SEO	No blog, resource center, or dealer-facing authority content	Nothing that earns dealer trust or tells the "why a CU-backed lender" story before a rep ever calls
AI in the workflow	None evident	Decisioning and verification appear manual — the gap this blueprint is built to close
Brand presence	Light social footprint for the size; borrower experience runs on the credit union's portal	The platform proof (originations, members, return) is barely told — the recruiting story is left on the table

The Presence Gap Is the On-Ramp

None of this requires changing the business — only making a strong, proven operation look and work as modern as it actually is.

A refreshed site, a dealer-enrollment experience, and dealer-facing authority content are low-cost, compounding moves that lift credibility with both dealers and CU partners.

They are also the natural first ninety days: fix the foundation and the story, then build the funding-speed engine on top of it.

09 Technijian Capability Proof

This section separates two things, plainly. First are proven builds — systems Technijian has actually built and operates. Then come the productized services VIA would engage. Each is labeled for what it is, and each maps to a specific VIA use case. Where AI touches a credit decision, it is explainable by design.

Proven Builds — Systems Technijian Has Built

AI Document Intelligence for FINRA Broker-Dealers

What Technijian Built: Technijian deployed AI document intelligence that auto-populates complex vendor questionnaires for FINRA-registered broker-dealers, cutting response time from days to minutes with 60–80% less manual review.

How This Applies to VIA Auto Finance: Pointed at the funding workflow, the same approach clears stipulations and verifies income and employment in seconds instead of days — the funding speed that wins dealers and removes the operational friction limiting indirect growth.

ScamShield — AI Detection Product

What Technijian Built: Technijian architected ScamShield, an AI scam-detection product, using a three-model LLM Council (Claude, GPT-4o, and Gemini), risk scoring, and persistent memory — a multi-model design that cross-checks each conclusion instead of relying on one opaque score.

How This Applies to VIA Auto Finance: That cross-checked, multi-model approach is the model for two VIA needs: screening applications for income misrepresentation and synthetic identities before funding, and keeping decisioning explainable so adverse-action reasons stay accurate and fair-lending review is defensible.

Productized Services VIA Would Engage

My AI Lead Gen — Account-Based Outbound

The Technijian Service: My AI Lead Gen is Technijian’s productized outbound service — it harvests high-fit targets from public data, enriches and scores them, and delivers outreach-ready, personalized sequences, replacing the data-subscription tax of tools like ZoomInfo and Apollo.

How This Applies to VIA Auto Finance: For dealer acquisition it builds the ranked list of franchised and independent rooftops worth recruiting in each expansion state, flags dealers losing a lender as competitors retrench, and arms the field team with a per-dealer dossier — depth on named accounts, not a broad blast.

My Dev — Custom Application Development

The Technijian Service: My Dev is Technijian’s custom application development service, built on an AI-native development lifecycle that integrates Claude Code, Figma Make, GitHub, and CI/CD to ship portals, dashboards, and integrations around a client’s actual process.

How This Applies to VIA Auto Finance: This builds the dealer-facing layer: a modern dealer portal with instant decisions and funding status, RouteOne and Dealertrack integration so dealers submit where they already work, and the verification and fraud-screening workflow behind it.

My Security — Security & Compliance, Built In

The Technijian Service: My Security is Technijian’s managed security service: every system is designed security-first, with role-based access, audit trails, and HIPAA, SOC 2, PCI-DSS, and GDPR-aligned controls built in rather than bolted on.

How This Applies to VIA Auto Finance: For VIA this delivers the GLBA Safeguards information-security program the law requires, plus the audit trails and fair-lending monitoring that make AI-assisted underwriting deployable — the low-friction entry point that also de-risks the next credit-union partner.

10 How AI Transforms VIA’s Growth Engine

The engine runs three motions at once: win dealers (account-based acquisition), fund faster and safer (the speed and fraud control that lift capture and protect return), and protect and scale (the compliance and analytics that keep the credit union confident and bring on the

next partner). The first motion grows the top of the funnel; the second converts it; the third makes the whole thing defensible and repeatable.

VIA AI Growth Engine - Win Dealers, Fund Faster, Protect the Franchise

Dealer acquisition on the left; funding speed and fraud control in the center; compliance and CUSO scale on the right.

* My AI Lead Gen - My AI - My SEO - My Dev - My Security. AI underwriting stays explainable and adverse-action-ready - it supports the dealer relationship and the credit union's risk team

Figure 10.0 — The Engine: Win Dealers, Fund Faster & Safer, and Protect & Scale

Motion	Play	What It Does	Metric	Technijian Service
Win Dealers	Dealer account intelligence	Score and prioritize dealers to recruit by territory and credit mix	Dealers added / mo	My AI Lead Gen
Win Dealers	Competitor-retrenchment triggers	Alert when a dealer loses a lender — call that day	Triggered calls	My AI
Win Dealers	Dealer-facing authority content	B2B content that earns dealer trust before a rep calls	Dealer inquiries	My SEO
Win Dealers	Field-rep enablement + CRM	Pre-call dossiers and pipeline across the expansion	Rep meetings	My AI

Motion	Play	What It Does	Metric	Technijian Service
Fund Faster	Stip & income verification	Clear documents in seconds, not days	Time-to-fund	My Dev
Fund Faster	Fraud & synthetic-ID screening	Catch misrepresentation before funding	Fraud losses avoided	My AI
Fund Faster	Dealer portal + instant decision	Real-time structures and funding status	Look-to-book	My Dev
Fund Faster	RouteOne / Dealertrack integration	Meet dealers where they already submit	Submission share	My Dev
Protect & Scale	Explainable decisioning + adverse action	Accurate reason codes — never a black box	Compliant notices	My AI
Protect & Scale	Fair-lending monitoring	Ongoing disparate-impact testing and documentation	Audit-readiness	My AI
Protect & Scale	GLBA Safeguards / security	The required security program and monitoring	Breach risk reduced	My Security
Protect & Scale	CU-partner expansion + early-warning	Recruit credit unions; protect return with analytics	New CU partners	My AI

The Honest Boundary

Any AI that touches a credit decision stays explainable and adverse-action-ready — accurate reason codes on every decision, ongoing fair-lending testing, no protected-class proxies. We do not sell a black box; a model that cannot explain itself is a non-starter under ECOA, and we will not put VIA there.

AI surfaces the right dealers, clears the documents, and screens for fraud — but the field rep's relationship and the credit union's risk team still own the decision. AI supports them; it does not replace them.

That honesty is the point: VIA gets the funding-speed and return upside without taking on credit or compliance risk it cannot defend.

11 Business Impact & Service Investment

The model below is built from public and industry benchmarks because VIA's internal numbers were not available for this draft. Every figure is estimated and conservative; the discovery questions in Section 14 replace them with real baselines. The logic holds across a wide range of inputs, because the levers — dealers won and funded volume per dealer — are large relative to the program cost.

Projected KPI Lift (Estimated)

KPI	Estimated Current	With the Program	Direction
New active dealers / quarter	Field-team limited	Account-intelligence-driven	More dealers
Funded originations / month	Current run-rate	Accelerated capture	Growth
Time-to-fund (stip clearing)	Manual, days	Automated, under an hour	Speed wins dealers
Documents auto-cleared	Largely manual	Majority automated	Capacity freed
Fraud caught before funding	Reactive	Predicted and screened	Return protected
Adverse-action / fair-lending	Manual	Automated and explainable	Audit-ready
Funding CU partners	One (American Heritage)	A recruiting pipeline	CUSO scale

Year-1 ROI Model (Estimated, Conservative Assumptions)

Model Input	Conservative	Target	Aggressive
New active dealer relationships (Y1)	+20	+45	+90

Model Input	Conservative	Target	Aggressive
Incremental funded originations (Y1)	+\$40M	+\$90M	+\$180M
Illustrative VIA economics on incremental volume*	+\$600K	+\$1.35M	+\$2.7M
Technijian Program Investment (Y1)	~\$188,000	~\$188,000	~\$188,000
Modeled ROI Ratio	3.2x	7.2x	14.4x

* VIA's CUSO economics (origination, servicing, and yield-share per loan) are not public, so the return line applies an illustrative, deliberately conservative ~1.5% of incremental originations as a placeholder — to be replaced with VIA's actual per-loan economics in discovery. Beyond this, the program avoids fraud losses and protects the credit union's return — the relationship that funds everything. All figures are projected, not guaranteed.

Technijian Service Investment Map

Service	Scope	Monthly	Y1 Total
My AI Lead Gen — Dealer Account Intelligence	Named-dealer scoring and targeting, competitor-retrenchment triggers, and a rep CRM across the expansion (Professional tier)	\$3,499/mo	\$42,000
My AI — Fractional AI Advisor	AI program leadership plus explainable-underwriting and fair-lending governance	\$2,000/mo	\$24,000
My SEO — Dealer Authority Content + Site	Dealer-facing B2B authority content and a modernized site (not consumer SEO)	\$1,500/mo	\$18,000
My Security — GLBA Safeguards Program	The required information-security program and monitoring — the entry point	\$1,200/mo	\$14,400
My Dev — Managed App Services	Hosting, monitoring, and ongoing optimization of the portal and automations	\$800/mo	\$9,600

Service	Scope	Monthly	Y1 Total
My Dev — Custom Build (one-time, phased)	Stip / income verification, fraud screening, dealer portal + instant-decision UX, and RouteOne / Dealertrack integration	—	\$75,000
My AI — Executive AI Workshop (one-time)	Leadership alignment plus a fair-lending guardrails roadmap	—	\$5,000
YEAR-1 TOTAL INVESTMENT	Recurring \$8,999/mo + builds		~\$188,000

The Math That Matters

Dealers are the lever. Winning roughly twenty net-new dealers in Year 1, each sending a steady flow of funded near-prime deals, is enough incremental volume to cover the program many times over on the funding economics alone.

Speed compounds the base. Faster funding lifts capture at every dealer already on board — the lender that funds fastest gets the next deal, month after month, with no new acquisition cost.

The program is phased — start with the compliance foundation and dealer intelligence, prove the funding-speed gains, then scale outreach and recruit the next credit-union partner — which lowers the entry point and de-risks the spend.

12 Implementation Roadmap

The roadmap runs on a 90 / 180 / 365-day cadence suited to a regulated, integration-dependent lender: lay the compliance and intelligence foundation first, then accelerate funding speed and the dealer experience, then scale the outreach and the platform. Real dealer-intelligence and funding-speed gains are visible inside the first ninety days; the bigger integrations and the next CU partner are given realistic runway.

Figure 12.0 — VIA Growth Program: 90 / 180 / 365-Day Roadmap

Phase 1 — Foundation (Days 1–90)

Get the compliance base right and stand up the intelligence that drives dealer acquisition.

Milestone	Deliverables
1.1 — Foundation & Compliance	Run the GLBA Safeguards review and a fair-lending / adverse-action readiness check. Refresh the website and stand up a clean dealer-enrollment experience so the platform looks as modern as it performs.
1.2 — Dealer Intelligence Live	Build the named-dealer target lists by territory, turn on competitor-retrenchment triggers, and equip the field team with a CRM and per-dealer dossiers.

Phase 2 — Accelerate (Days 91–180)

Turn funding speed into the dealer-winning advantage, and meet dealers where they submit.

Milestone	Deliverables
2.1 — Verification Automation	Pilot document, income, and employment verification plus fraud and synthetic-identity screening; baseline time-to-fund and drive it down toward the target.

Milestone	Deliverables
2.2 — Portal & Integration	Launch the dealer portal with an instant-decision experience and RouteOne / Dealertrack integration; onboard the first dealers onto the new flow.

Phase 3 — Scale & Protect (Days 181–365)

Scale the account-based outreach, make the decisioning explainable and defensible, and grow the platform.

Milestone	Deliverables
3.1 — Decisioning & Outreach at Scale	Bring explainable decisioning support and fair-lending monitoring into production; scale personalized dealer outreach across the new states.
3.2 — Scale the CUSO & Optimize	Recruit additional credit-union partner(s) with the platform proof; turn on portfolio early-warning; deliver the ROI dashboard against the Section 14 baselines.

13 Quick Wins — Start This Week

Five actions VIA can take immediately — before any Technijian engagement. Each creates value this week and leads naturally into the larger program.

1 — Refresh the Site and Add a Dealer-Enrollment Page

Modernize the brochure site and add one clean "become a dealer partner" enrollment page. It costs little, and it is the first thing a dealer or a prospective credit-union partner sees when they vet VIA — the platform should look as proven as it is.

2 — Confirm the RouteOne / Dealertrack Submission Path

Make sure dealers can submit deals to VIA through the systems they already use every day. If the integration is not exposed, that is the single fastest way to lower the friction of sending VIA a deal — table stakes in indirect lending.

3 — Publish One Dealer-Facing Authority Piece

Write a single, plain page answering the question a dealer actually asks: why send near-prime deals to a credit-union-backed lender? Faster funding, better structures, a partner that funds clean. This is the seed of the content that earns dealer trust before a rep ever calls.

4 — Baseline the Current Time-to-Fund

Measure how long a deal takes from submission to funding today, and how much of that is manual stip clearing. That single number is the starting point for the funding-speed story — and the clearest before-and-after the program can show.

5 — Run a Fair-Lending and Adverse-Action Readiness Check

Before any AI touches a credit decision, review how adverse-action reasons are generated today and whether fair-lending testing is documented. It is a free posture check that de-risks everything that follows — and it is exactly what a funding credit union wants to see.

14 Questions to Calibrate This Plan

This blueprint was built from public information. The numbers in Sections 11 and 12 are deliberately conservative estimates — a short discovery call replaces them with VIA's real baselines and sharpens the entire program. These are the questions that move the model the most:

Topic	What We'd Confirm	Why It Matters
Dealer base	Active dealer count today, dealers added per month, and field-rep headcount	Calibrates the dealer-acquisition scope and ROI
Origination run-rate	Annual (vs. cumulative) originations, average loan size, and look-to-book	Sets the funded-volume lines in the model
Funding speed	Current time-to-fund and how much stip clearing is manual	The speed baseline the whole program improves
CUSO economics	VIA's economics per loan (origination / servicing / yield share)	Replaces the illustrative return placeholder with real numbers
Decisioning	Rules-based scorecard vs. any model; the adverse-action and fair-lending process today	Defines how AI underwriting can be deployed explainably
Fraud	Current fraud and synthetic-identity losses	Sizes the fraud-screening payback
Integrations & systems	RouteOne / Dealertrack / CUDL status, plus the loan-origination and CRM stack	Defines the build and integration surface
CUSO structure	Whether American Heritage is the sole funder, and the CU-partner pipeline	Scopes the platform-expansion track

How to Use This Section

None of these questions block starting — the Quick Wins and the Phase 1 foundation proceed regardless.

A single 30-minute call answers most of them and lets Technijian return a calibrated ROI model and a fixed-scope Statement of Work.

The goal is a plan built on VIA's real numbers — not on our conservative estimates.

15 What Happens Next

VIA already has the hard things: a proven CUSO model, a credit-union funding moat the competition cannot copy, a prime and near-prime book on the safer side of the market, and

a track record of \$350 million originated and ten thousand members created. What it has not yet done is convert that funding advantage into dealer share by funding faster — and the corner where a funding moat meets AI speed is still empty.

The opportunity is concrete: win more dealers with account intelligence while competitors retrench, fund faster and cleaner so the lender that moves quickest gets the deal, and protect the credit union's return so the platform can scale to more states and more partners. A focused, account-based program does all three — with underwriting that stays explainable and a field team that stays central.

Recommended Next Steps

Step 1: A 30-minute discovery call to answer the Section 14 questions and confirm program scope.

Step 2: Technijian returns a calibrated ROI model and a fixed-scope Statement of Work within 5 business days.

Step 3: Phase 1 kickoff — the compliance foundation, the site and dealer-enrollment refresh, and dealer account intelligence — live inside 30 days of signature.

16 About Technijian

Technijian is an AI-native managed services and technology firm headquartered in Irvine, California, serving small and mid-sized businesses since 2000. We build and operate the AI systems that help regional businesses compete at scale — with security and compliance built in, not bolted on.

Service	What It Delivers for VIA Auto Finance
My AI Lead Gen	Account-based dealer acquisition — scoring, prioritizing, and sequencing the named rooftops and credit-union partners worth winning, supporting the field team rather than replacing it
My AI	AI strategy and builds — fraud and synthetic-identity screening, explainable decisioning, fair-lending monitoring, and portfolio early-warning, with governance throughout
My Dev	Custom, AI-native builds — the dealer portal and instant-decision experience, document verification, and RouteOne / Dealertrack integration
My SEO	Dealer-facing authority content and a modernized site that build credibility with dealers and prospective credit-union partners
My Security	The GLBA Safeguards information-security program, monitoring, and the audit trails that make AI-assisted lending defensible
