Core system of record

Canusa Hershman is an independent, founder- and family-held group that sits in the middle of a two-sided global trade: it sources recovered fiber, plastics, and metals, finances and moves the material, and sells it to mills and consumers worldwide. This summary shows where AI creates measurable value — on two fronts — and states only verified facts, deferring every company-specific number to discovery.

Grow the trade. AI arms the trader, it does not replace them: price and market-signal decision-support, account and credit intelligence, pre-call dossiers, and authority content that makes Canusa Hershman the cited name when a generator or mill goes looking.

Integrate and run leaner. The fastest, lowest-risk returns are in the back office: automating bills of lading, customs, and certificates of origin into cieTrade; supplier/customer portals; logistics optimization; and ESG reporting.

What we verified

- **A group, not one company:** rebranded to a parent brand in 2021, with six divisions (CHRC trading, Recycle 1 processing, BA/CH Polymers, Evergreen Fibres, Pulp & Alt Fibers, Newport CH export JV).
- **Independent and the consolidator:** founder/family-held LLC (Fleming + Hershman), not PE-owned — acquiring, not being acquired. HQ Branford, CT.

- **Built on cieTrade:** supplier/customer portals run on the cieTrade trading platform — the anchor every integration play plugs into.
- **A digital gap that is the wedge:** no published market commentary, and a LinkedIn page mislabeled as a semiconductor manufacturer — fixable, and the clearest place to start.

A correction we made for accuracy

Three details that circulate about this account did not survive verification, so we left them out and turned them into questions: an "ISO-certified" claim, a "Plymouth, Michigan" HQ (the verified HQ is Branford, CT), and a "Frontier Trading" partnership. That is the standard of evidence behind every figure here.

The engine

Three columns: get found and trusted, arm the traders with intelligence, and integrate the back office around cieTrade — each delivered by a specific Technijian service.

Canusa Hershman AI Growth & Integration Engine

Be found and trusted (left); arm the traders with intelligence (center); automate the back office around cieTrade (right).

* My SEO · My AI · My AI Lead Gen · My Dev. AI augments traders and the cieTrade system of record — it does not replace the trader relationship that closes a contract.

Investment & the path forward

No invented numbers. We price from real, published Technijian service ranges and model ROI only after discovery — on trade margin and hours recovered, not revenue (the public

revenue figures for the group conflict, so we cite none). The path is land-and-expand: prove one automation and the authority layer, then scale across divisions.

The easiest first step is an Executive AI Briefing — a working session on where AI creates measurable value for Canusa Hershman, no obligation. Or begin with a half-day AI Readiness Assessment that maps your cieTrade workflows and returns a prioritized, costed roadmap. The full blueprint ends with a structured questionnaire — "Questions to Complete the Analysis" — that turns this summary into a costed plan.
