70+ yrsCombined aftermarket
experience (company)**25%**U.S. tariff on China auto parts
(Sec. 301)**~90%**Of business that is custom
development**US·EU·China**

Sales & sourcing offices

China Auto Group — a trade name of S. Kirby & Company, Inc., in Rancho Santa Margarita, California — is a turnkey China-sourcing partner for the automotive industry: it identifies the factory, engineers and samples the part, manages production and quality, clears customs as the U.S. importer of record, finances in U.S. dollars, and delivers “Landed Your Warehouse.” That job — de-risking China sourcing — has never been harder, or more valuable, than in 2026. This summary shows where AI builds on the firm’s real operational base (Acctivate, engineering, a Shanghai quality office) on two fronts, and states only verified facts, deferring every company-specific number to discovery.

Win more accounts. AI authority content makes China Auto Group the cited expert buyers find for sourcing under tariffs and China+1; account and trigger intelligence and faster quotes help win and keep the aftermarket, OE, Tier 1/2, and performance accounts the business runs on. **Source faster and lower the risk.** AI that classifies a part to its tariff code, models landed cost across China, Vietnam, Mexico, and India, drafts quotes and RFQs in minutes, and assembles PPAP and customs paperwork — with a qualified person confirming every classification and quote, and all proprietary data in private, governed systems.

What we verified

- **A U.S.-accountable, turnkey sourcing partner:** identify factory, negotiate, engineer, QC, ship, clear customs as importer of record, finance in USD, and warehouse — “we work for our customers, not for factories.”
- **A real operational base already:** Activate for inventory and order management, engineering/design software, and a Shanghai office with an IATF-16949-qualified engineer for on-site quality.
- **Automotive-specialized, U.S.-domiciled:** a hard-to-copy corner — generalists are turnkey but not auto experts; marketplaces are cheap but transfer no risk; inspection firms cover one step.
- **A quiet digital front door:** a dated brochure website, no published expertise, and near-invisibility to AI search — exactly when buyers are searching for tariff help. The lowest-cost place to start.

The one idea

Sourcing from China is harder every quarter, and the buyers who used to do it themselves increasingly cannot. That makes a U.S.-accountable, automotive-specialized partner who can classify, cost, and qualify across countries faster than anyone else more valuable, not less — and AI is the multiplier on exactly that work. China Auto Group already owns the hard-to-copy corner; AI widens the moat.

The engine

Three columns: win more accounts, classify-cost-and-quote faster with AI, and automate the sourcing back office around Acctivate — each delivered by a specific Technijian service.

China Auto Group AI Growth & Integration Engine

Win more accounts (left); classify, cost, and quote faster (centre); automate the sourcing back office around Acctivate (right).

* My SEO - My AI - My Dev. AI augments the team and Acctivate; a person signs off every classification, quote, and commitment, and proprietary specs + supplier pricing stay in private, go.

Investment & the path forward

No invented numbers. We price from real, published Technijian service ranges and model ROI only after discovery — on hours recovered per quote and classification, faster turnaround, and landed-cost savings captured, never a guessed revenue figure. The path is land-and-expand: prove one automation — the tariff-classification and landed-cost engine is the highest-conviction first build — then scale across the back office.

The easiest first step is a short discovery call, with no obligation — or a half-day AI Readiness Assessment that maps your workflows and returns a prioritised, costed roadmap. We are in Irvine, about 25 minutes away. The full blueprint ends with a questionnaire that turns this summary into a costed plan.
