

Technijian

for ROG Services

Managed & co-managed IT, security, and the fiduciary-grade data protection your mission depends on.

An introductory IT discovery conversation · Ravi Jain, Founder & CEO, Technijian

Nonprofit SSA & VA representative payee · 7 offices (CA + MT) · 501(c)(3) since 2010 · serving clients who can't manage their own benefits

18 Technology Dr. Ste 141, Irvine CA 92618 · technijian.com · 949.379.8499 · technology as a solution

WHY WE'RE HERE

A working conversation — on your terms

You reached out about IT. Today is about understanding how ROG works and where an outside partner genuinely helps — nothing assumed, nothing to sign.

OUR PROMISE TODAY

We're not here to sell you a network you didn't ask for. We're here to understand how you protect the people you serve — and find the two or three places an outside team genuinely takes work off your plate.

You stay in control.

We right-size to a nonprofit budget and fill the gaps a small team can't staff around the clock.

1

What we verified about you

From public sources only — said back so you can correct anything.

2

Who Technijian is

25+ years, security-first, a dedicated team model — in 20 seconds.

3

How we'd fit

Managed or co-managed — we flex to whoever runs your IT today.

4

Security & your fiduciary duty

Protecting SSNs, benefit funds, and the people behind them.

5

Your questions

The heart of the meeting — your world, your priorities.

6

A free, no-commitment next step

A security read of your environment that's yours to keep.

WHAT WE VERIFIED

What we know — from public sources only

Everything here is from your website and public filings. We've assumed nothing about your systems. If we got anything wrong, now's the time to fix it.

SSA + VA

REP PAYEE / FIDUCIARY

WHAT THAT TELLS US

You're a fiduciary who moves money. As an SSA & VA representative payee you receive and disburse benefits — and remotely load prepaid debit cards — for people who can't manage their own funds. That makes your operation a payments operation, with all the risk that carries.

You hold deeply sensitive data. SSNs, bank-account details, and health/disability information on a vulnerable population — exactly the data attackers and fraudsters target hardest.

You run multi-site, on a nonprofit budget. Seven offices across California and Montana, a small team, and a mission to protect — so the answer has to be right-sized, not enterprise-priced.

WHO WE ARE

Technijian, in 20 seconds

Enough to know we're a serious, local, security-first partner who works with nonprofits — then back to you.

SINCE 2000

25+ years, still here

An Irvine-based IT firm founded in 2000, with a Panchkula, India delivery center for true follow-the-sun coverage. We build long relationships — not flip-and-churn engagements.

THE POD MODEL

A team that knows you

You get a dedicated pod — a named team that learns your environment — not a different stranger on every ticket. It's the single thing clients tell us they were missing before.

SECURITY-FIRST

Built in, not bolted on

CISSP-led, with our own 24/7 Security Operations Center and CrowdStrike / Huntress-grade tooling. Security isn't an add-on line item for us — it's how we run everything.

AI-FORWARD + NONPROFIT-AWARE

We build, and we right-size

We develop practical AI and custom software — and we know the nonprofit licensing programs (TechSoup, Microsoft 365 nonprofit) that keep a 501(c)(3)'s costs down.

HOW WE WORK

The kind of work we do for organizations like yours

Representative engagement profiles — the shape of the work, no client names and no cherry-picked numbers. The constant: protect sensitive data and the people behind it, on a right-sized budget.

PROFILE A · MULTI-SITE NONPROFIT

Managed IT, many offices

A nonprofit with several small offices and no full IT department. Scope: standardized and secured Microsoft 365 with nonprofit licensing, MFA for everyone, managed endpoints, and tested backups — so leadership could stop worrying about IT and focus on the mission.

Right-sized, nonprofit-priced.

PROFILE B · HANDLES MONEY + PII

Fraud & BEC hardening

An organization that disburses funds and holds sensitive personal data. Scope: email security and anti-phishing, identity hardening, and a verification process for any payment- or account-change request — the controls that stop wire-fraud and payment diversion.

The controls that stop payment fraud.

PROFILE C · RECORDS-HEAVY OPS

Document & workflow AI

An operation buried in recurring paperwork and reporting. Scope: AI document-intelligence and workflow automation explored to cut repetitive processing — the same pattern we'd look at for annual accountings and per-client reporting, once the IT foundation is solid.

The pattern for your accounting & reporting.

Different situations, one constant: we protect sensitive data and the people behind it — without taking the wheel from you.

HOW WE'D FIT

Managed or co-managed — your call, not ours

We don't yet know who runs your IT today, and that's fine. Whichever shape fits, you stay in control and we right-size to a nonprofit.

Fully managed IT

(if no one really owns IT today)

- We run day-to-day IT end-to-end
- Help desk your staff can just call
- Security, backup & updates handled
- One predictable monthly cost
- You set priorities; we do the work

Co-managed IT

(if you have an internal person or shop)

- We augment whoever handles IT now
- They stay in charge of the roadmap
- We add 24/7, security & project bandwidth
- Cover nights, weekends & vacations
- Pick the layers you actually need

1

You keep control

You own the relationship and the roadmap. We never make changes you didn't approve, and you can see everything we do.

2

We cover what a small team can't

24/7 security monitoring, after-hours and weekend response, backup, and surge bandwidth for projects — across all seven offices.

3

Right-sized for a nonprofit

We apply nonprofit licensing (TechSoup, Microsoft 365 nonprofit) and scope only what you need — protection that fits the budget.

SECURITY & YOUR FIDUCIARY DUTY

Six layers a payee that moves money has to cover

You hold SSNs and bank details and disburse benefit funds for vulnerable people. The bar is high — and SSA expressly asks payees to protect this data. Which layers keep you up at night?

LAYER 01

Identity & access

MFA on every login, conditional access, and role-based access to beneficiary data — exactly what SSA asks payees to document. Most breaches start at a stolen sign-in.

LAYER 02

Endpoints & devices

EDR + threat detection on every laptop across all offices, disk encryption, and enforced patching — on the network and off it.

LAYER 03

Email & payment fraud

Anti-phishing plus a verification process for any request to change a payment, bank account, or card load. Business email compromise is the #2 cybercrime by dollar loss.

LAYER 04

Data, backup & ransomware

Immutable, tested backups of beneficiary records and accounting systems with fast recovery. A sync to the cloud is not a backup.

LAYER 05

Audit-ready records

Records stored, retained, and retrievable for an SSA Protection-and-Advocacy onsite review or a VA field examination — without a fire drill.

LAYER 06

24/7 SOC & response

Eyes-on-glass monitoring with a defined response when something looks wrong — the around-the-clock coverage a small team can't staff alone.

A FEW WAYS WE COULD HELP

Three places a partner usually earns its keep

Not a menu to buy today — hypotheses to react to. Tell us which of these is real for you, and which isn't.

TAKE WORK OFF THE PLATE

Managed / Co-Managed IT

Help desk your staff can just call, managed devices and Microsoft 365 across all seven offices, patching and monitoring, and surge bandwidth for projects — with nonprofit licensing applied. We flex to whoever runs IT today.

One team, all offices, right-sized.

PROTECT FUNDS, SSNS & THE PEOPLE

Security & Data Protection

MFA and identity hardening, EDR, email and payment-fraud defense, tested backups, and records you can produce for an SSA or VA review. The protection a fiduciary handling benefit money needs — and SSA asks for.

Built for a payee's duty of care.

BEYOND KEEPING THE LIGHTS ON

Strategic IT + AI Efficiency

A planning cadence — and practical AI for your operation: drafting the annual SSA/VA accountings, reconciling per-beneficiary ledgers, and processing intake paperwork. The repetitive work AI can take off your staff, once the basics are solid.

The layer most providers don't bring.

Most teams your size feel one of these the most. Today's job is finding out which — then going deep there.

YOUR TURN

The questions that actually shape a fit

This is the part that matters most. The more candid you are here, the more useful our free assessment and any proposal will be.

1

Who handles your IT today — an internal person, an outside provider, or a bit of both?

2

Across your seven offices, which are staffed, and how do your people connect and share files?

3

What runs the per-beneficiary accounting, bill-pay, and prepaid-card loading — a payee platform, QuickBooks, spreadsheets?

4

Are you on Microsoft 365 or Google Workspace — and is multi-factor login turned on for everyone?

5

How do you guard against a fraudulent request to change a payment, bank account, or card load?

6

How are SSA/VA records stored and backed up — and how do you produce them for an onsite review or field exam?

7

Where does your staff lose the most time to manual paperwork — annual accountings, intake, reconciliation?

8

Besides you, who weighs in on an IT decision — the board, finance, leadership? What would make this worth your time?

A FREE FIRST STEP

Start with a no-commitment read of your environment

Before anyone talks contracts, we give you something useful — a clear picture of where you stand, yours to keep.

FREE · NO CONTRACT · YOURS TO KEEP

Nexus Assess

A security and risk read of your actual environment:

- Internal + external vulnerability scan
- Dark-web credential exposure check
- Microsoft 365 / Google Workspace security review
- Prioritized roadmap — mapped to SSA/VA safeguarding

No obligation. Whether or not we ever work together, the roadmap is yours to act on with whoever supports you today.

01

Today — discovery

A relaxed conversation about your environment and what matters most. No commitment.

02

Free Nexus Assess

We scan and review, then hand you a plain-language risk roadmap mapped to your safeguarding duties.

03

Right-sized proposal

Managed or co-managed — only the layers you want, scoped to your real environment, nonprofit licensing applied.

THE NEXT STEP

One small step. **Nothing to sign.**

RECOMMENDED

Book your free Nexus Assess

We scan your environment and Microsoft 365 / Google Workspace, then hand you a prioritized risk roadmap within about 10 business days — yours to keep, no contract, no obligation.

HAPPY TO SHARE

Our security + AI playbook

I'll walk you through the broader security and practical-AI playbook we run for ourselves and our clients, nonprofits included — useful context whether or not we work together.
