

ANDERSEN INDUSTRIES

AI Growth & Integration Plan · Executive Summary

Prepared by Technijian · 2026-06-15

Since 1966

~60 Years Fabricating in CA

108,000 ft²

Single-Source Facility

Two Engines

Fabrication + WeldPro 360

**Existing
Client**

Already with Technijian

The Opportunity

Andersen Industries owns the hard things in its category. A 108,000-square-foot single-source plant in Adelanto, the full cut-form-machine-weld-finish stack under one roof, sixty years of fabrication know-how, an OEM and contractor customer base, and its own national product line, WeldPro 360 — branded MIG welding boom arms and source-capture fume extraction. Two engines, one shop. And it is already a Technijian client.

The growth gap is the AI operating layer that turns those assets into speed and found revenue. A contract fabricator wins or loses on three things a hand-run shop struggles to keep up with in 2026. The quote race, where the buyer awards the job to whoever returns a credible number first — and today an Andersen estimator reads each uploaded drawing and quotes by hand. Discoverability, where a sourcing engineer or a weld-cell manager increasingly asks an AI assistant for a shop or a product before they ever search — and Andersen is not yet the cited answer. And knowledge retention, where the skilled-trades shortage threatens to take sixty years of estimating and welding expertise into retirement.

No competitor in Andersen's region markets or operates AI-speed quoting, answer-engine authority, and modern product marketing together. The capable shops operate by hand; the cert-strong players are legacy on digital; the brokers are bare. Andersen already owns the plant and the trust — adding the AI layer puts it in a corner none of its rivals hold. And because Technijian already supports Andersen's IT, the build starts inside an environment we already know.

The Boundary — AI Drafts, A Person Signs

AI reads the drawing and drafts the first-pass estimate, gets the shop found in AI search, and assembles the inspection and cert package — uniformly, with sources cited, inside the rules the customer expects.

AI never fabricates an inspection result and never invents a material certification. An Andersen estimator signs the quote that goes to the customer, and a welder or QA lead signs the inspection — exactly what a quality-minded buyer needs to see.

How AI Transforms Andersen's Growth Engine

The engine runs three motions at once. The first gets Andersen found and specified by the sourcing engineers, contractors, and weld-cell managers who now ask Google AI, ChatGPT, and Perplexity for a shop or a product before they search. The second wins the quote and spec race by turning drawings and RFQs into accurate first-pass estimates in minutes, not hours, and turning a WeldPro inquiry into a guided, configured quote. The third holds and grows by recalling sixty years of job history, generating a steady stream of reviews, and capturing the veteran knowledge before it retires. Because Technijian already supports the environment, the engine plugs into systems we operate today.

The AI Growth & Integration Engine - Get Found, Win the Quote & Spec Race, Hold & Grow

Visibility on the left; the AI estimating and spec engine in the center; reviews, memory, and capacity on the right.

* My SEO - My AI Lead Gen - My AI - My Dev. AI reads, drafts, and assembles. An Andersen estimator signs the quote; a welder or QA lead signs the inspection.

The Engine: Get Found & Specified, Win the Quote & Spec Race, and Hold & Grow

Get Found & Specified

Own answer-engine citations on the queries that matter for both engines: contract metal fabrication in the Inland Empire and High Desert, custom equipment enclosures, MIG welding boom arms, and weld fume extraction. Publish the under-covered capability and welding-fume-safety content, run a structured review-generation program, and market WeldPro 360 to a national audience for the first time.

Win the Quote & Spec Race

Point the same AI document-intelligence engine Technijian built for FINRA broker-dealers at Andersen's RFQs and drawings: read the drawing, extract the cost-driving features, recall the closest prior job, and draft a first-pass estimate in minutes. Assemble inspection and cert packages toward ISO/AS9100-ready documentation. Turn WeldPro inquiries into configured quotes. Every estimate is three-model checked and an estimator signs it.

Hold & Grow

Make sixty years of quotes, jobs, and tooling instantly recallable, so a repeat job is re-quoted in minutes instead of rebuilt from scratch. Turn finished jobs into a steady stream of recent five-star reviews. Capture the setups, weld procedures, and fixturing know-how of veteran staff before retirement. Recover the estimating hours quoting consumes today, and point them at more quotes and better design-for-manufacturability feedback.

The Program — Start Small, Expand as It Proves Out

The program leads with a small, low-commitment entry that pays for itself on the highest near-term levers — jobs won faster and found, WeldPro product sales, and estimating hours recovered — with no large build to begin. The custom AI Quote & Spec engine, integrated with the environment Technijian already supports, comes second, once the entry proves the lift. Productizing the WeldPro engine and the cert-doc automation is the Phase-3 upside, not the Year-1 ask.

Entry Program — The 90-Day AI Visibility & Quote-Velocity Pilot	Monthly	Y1
My SEO — Tier 3 + AI Search Optimization (authority + content + reviews + WeldPro)	\$1,200	\$14,400
My AI Lead Gen — Named-Account + Product Capture (Starter)	\$1,000	\$12,000
My AI — Readiness + Executive Workshop (one-time)	—	\$5,000
ENTRY PROGRAM — start here	\$2,200/mo + workshop	~\$31,000

Y1 Lever (Estimated, Conservative)	Conservative	Target	Aggressive
Incremental contract jobs won — gross-profit contribution	+\$55K	+\$120K	+\$220K

Y1 Lever (Estimated, Conservative)	Conservative	Target	Aggressive
WeldPro 360 product sales lift	+\$20K	+\$45K	+\$80K
Estimating + admin hours recovered	+\$15K	+\$30K	+\$55K
Total Y1 value (entry program)	+\$90K	+\$195K	+\$355K
Modeled ROI vs. ~\$31K entry	~2.9x	~6.3x	~11.5x

All figures are estimated and conservative; the full plan walks through every assumption and calibrates after a short discovery call. The custom AI Quote & Spec engine, integrated with the systems Technijian already supports, adds further gains the entry ratio does not count — quote-velocity compounding, the cert-doc engine opening new RFQs, and the WeldPro configurator maturing — and is the Phase-2 expansion, once the entry proves out.

90 / 180 / 270 Day Growth & Integration Roadmap

Andersen Industries + Technijian. Get found and specified, win the quote and spec race, then hold, grow and scale.

* Named-account roster, RFQ volume, and quote-system integration calibrate after a 30-min discovery call. Estimates shown are conservative.

90 / 180 / 270-Day Roadmap

Next Step — 30 Minutes

A short call to confirm scope and calibrate the plan against Andersen's actual quote volume, named accounts, and WeldPro numbers.
