

TECHNIJIAN MY JIAN — ONE AI AGENT FOR YOUR WHOLE STACK

My Jian the AI Agent

40% OF NAME-BRAND PRICE. SAME PROTECTION. ONE PLATFORM.

Jian replaces a stack of name-brand security, monitoring, compliance and ITSM tools with one AI-driven platform that watches your environment 24×7, opens forensic tickets, proves your compliance, and correlates threats across every layer — **priced at ~40% of what the name brands charge.**

14-day full-feature trial — no credit card. Or start free with **Jian Watch**: monitor one resource, forever, at no cost.

Proactive IT Hours Cut

HOW JIAN WORKS

Four functions on a clock. One judgment loop.

Lightweight evaluators run on a fixed cadence; the AI gateway is pulled in only for **judgment and context**. Every output is a forensic, MITRE-tagged ticket routed to a real technician.

THE AGENT FUNCTIONS — CADENCE IN PACIFIC TIME

**Alert**

Every 15 min · lower tiers 30m / 1h / 2h / 6h

Real-time critical-event detection by fast evaluators; the LLM is pulled in only to add context.

Output: opens a P1/P2 Client-Portal ticket + a Teams channel + an Adaptive Card to "Jian Alerts."

**Diagnose**

Daily 14:00 PT · or at Alert cadence on critical platforms

The judgment pass — reads the day's data through the AI gateway and decides what warrants a ticket, the recommended fix, and the MITRE tag.

Output: a forensic CP ticket routed to the on-shift technician.

**Activity**

Daily 14:30 PT

Daily roll-up of the day's events into a per-client security-posture summary.

Output: feeds the monthly reports, the SIEM correlator, and the learning loop.

**Counts**

Observed daily 05:00 PT · billed monthly

Usage and license counting — observed-vs-billed reconciliation that surfaces under-billing and license waste.

Output: read-only count reports for finance and ops.

REMEDiate — GATED BY DESIGN

Jian opens tickets. It does not silently change your systems.

"Jian shows you a documented audit trail proving it would have made the right call — N times — before it is ever empowered to act."

LIVE AUTONOMOUS ACTIONS (SAFE & REVERSIBLE)

- ✓ Jian **self-heals its own platform**
- ✓ **M365 session revocation** on confirmed account takeover (live across tenants)
- ✓ A small fixed catalog of reversible infra actions: re-run stale pulls, backfill, restart a backend

EVERY CLIENT-PLATFORM FIX IS EARNED

- 🔒 7 days of clean diagnose traces matching what techs did **≥95%**
- 🔒 Explicit **per-operation approval** + a tested rollback path
- 🔒 First client-platform remediation (Sophos firewall) is **roadmapped 2026 Q2**

COMPLIANCE ENGINE

31 evaluators. 5 frameworks. Evidence, never assumptions.

Continuous, framework-tagged compliance evidence — produced on a clock, delivered as a branded report, and locked into a tamper-evident audit log.

31 EVALUATORS ACROSS 5 FRAMEWORKS

HIPAA

SOC 2

CMMC

PCI-DSS

Technijian Baseline

COMPLIANCE TIER ADDS CUSTOM FRAMEWORKS

SOX

GLBA

FINRA

NIST 800-171

FedRAMP

Each evaluator continuously checks one control and returns a pass / fail / **unknown** result tied to live evidence from your environment.

THREE MODES, ON A CADENCE

Alert

6 critical-breach evaluators every 15 min — immediate ticket on a control collapse.

Diagnose

All **31 evaluators daily at 03:00 PT** — the full posture sweep.

Activity

Pass / fail by framework, daily 14:30 PT — feeds the monthly report.

THE 6 CRITICAL-BREACH ALERTS — CAUGHT WITHIN 15 MINUTES

● MFA disabled

● Audit log turned off

● CA policy disabled

● DMARC reverted

● New mailbox forwarding rule

● New Global Admin created

Framework-Tagged Evidence

Continuous evidence collected and tagged to the controls it satisfies — ready for any audit.

Branded Monthly Report (DOCX)

A polished, client-ready compliance Word document delivered every month.

Append-Only Audit Log

A tamper-evident log of every decision and result — nothing is overwritten.

When an evaluator cannot prove a result, it returns **"unknown"** — **Jian never claims a control passes without evidence.**

SIEM + MITRE ATT&CK CORRELATION

The attack the single-tool stack misses.

Jian maps every event to MITRE ATT&CK, then correlates across five security sources to catch the coordinated kill chain no one tool can see alone.

858

Techniques

15

Tactics

189

Threat Groups

824

Software / Tools

Refreshed **daily at 02:00 PT** from the official MITRE ATT&CK STIX bundle — the catalog is never stale.

TWO CORRELATION MODES

Real-Time every 15 min

Scans a rolling 1-hour window and fires a P1 the moment a critical correlation crosses threshold.

Retrospective daily 14:30 PT

Re-scans the **prior 7 days** against the freshly refreshed catalog — catches slow-burn campaigns that drip below the real-time threshold.

Kill-Chain Scoring

Maps each event to MITRE, groups by (client, day-window), applies a weighted tactic score, and sets severity by how many distinct tactics fired.

5 CORRELATED SECURITY SOURCES

- 1 **Inky** — phishing & BEC
- 2 **Sophos** — firewall / IPS
- 3 **M365 Security** — sign-in risk
- 4 **CrowdStrike** — endpoint EDR
- 5 **Huntress** — persistence / NOC

EXAMPLE KILL CHAIN

Four signals, four tools, four "minor" alerts — correlated into one **CRITICAL** coordinated-attack ticket.

Each event alone looks minor. Correlated across sources, Jian scores a multi-tactic kill chain and escalates — the attack single-tool monitoring would miss.

HOW JIAN COMMUNICATES

It talks where your people already work.

Email, Microsoft Teams, and the Client Portal — three channels, one agent, every action logged and routed to the right human.

Email

Microsoft Graph · jian@technijian.com

- **Morning Summary** daily at 07:00 PT
- **Security alerts** — rich HTML with MITRE map, IP-geolocation table, plain-English AADSTS codes, what Jian did + next steps
- **User-direct notices** — emails the affected user on their own sign-in events
- **Weekly autonomy report**, Mon 07:00 PT

Branded client-facing reports, optional

MS Teams — @Jian bot

Channel-per-ticket · Adaptive Cards

- **Channel per ticket** — creates #<ticket>—<subject>, renames [CLOSED] + archives on close
- **Adaptive Cards** for open / update / assign / close + a dedicated "Jian Alerts" channel
- **Two-way** — techs & requester chat in-channel, relayed to the Client Portal
- **Self-service assistant** answers IT questions from a per-client RAG brain

Installed in 99 of 100 client Teams tenants

Client Portal Tickets

Idempotent · shift-aware routing

- **Idempotent** — dedupe key `platform:client:date:type`, never double-files
- **Forensic context** — MITRE tag + recommended fix + evidence on every ticket
- **Shift-aware routing** — India-primary / US-fallback, after-hours handoff, L2/L3 escalation if no time entry in 4h, 3-bounce cap
- **Automatic billable time entries**

CP poller runs every 2 min (no webhook)

THE APPROVE / DENY CONTROL LOOP

Escalations become **approve/deny emails** that lead with "✅ What I want to do: <specific fix>." A poller reads the reply (token + anti-spoof) every 10 minutes and runs **only** actions from the fixed reversible catalog.

An AI model — or an email reply — can **never run an arbitrary command**. Only the fixed, reversible catalog is reachable.

WHAT JIAN MONITORS

40+ platforms, one correlated brain.

Every source below is **live today** — grouped by the layer it protects. Roadmap items are labeled separately and are never sold as live.

LIVE DATA SOURCES — BY LAYER

**Identity / Microsoft 365 — 22 workloads**

M365 **Security** (risky/failed sign-ins, password spray, impossible travel, MFA), **Admin/Entra** (app-cred expiry, PIM/roles, CA policy), **Compliance** (Secure Score, MFA%, audit-log), **Storage** (mailbox/OneDrive/SharePoint/Teams), **License** (assigned-vs-used + Pax8 reconcile), **Apps service-health**

**Email Security / Deliverability**

Inky Phish Fence (phishing, BEC, brand impersonation, user-reported, link-clicks), **EasyDMARC** (DMARC/SPF/DKIM posture, new sending sources)

**Endpoint / EDR**

CrowdStrike Falcon (malicious PowerShell, credential dumping, lateral movement, beacons), **Huntress** (persistence, webshells, malicious scheduled tasks, NOC escalations)

**Network / Firewall**

Sophos Firewall (IPS hits, brute force, geo-blocks, port scans), **Meraki** (switch/AP health, IDS/IPS, WAN failover, config drift), **OpManager** (device/interface alarms, availability), **Cisco switching** (port-channel/LACP, config drift)

**DNS**

Cisco Umbrella (DNS-layer blocks, malicious-category lookups, roaming-agent drift)

**Web / Edge**

Cloudflare (WAF hits, L7 bot/DDoS, cert expiry, zone health)

**Backup / DR — vendor-agnostic**

Veeam (VBR + 365 + ONE — failed sessions, malware findings, repo runway) + **NAKIVO** (per-job status, unprotected backups, transporter load + self-heal)

**Database, Virtualization, Access, Voice, DLP**

SQL Server (health, failed jobs, blocking, backup/log), **vCenter** (host/datastore/VM), **ScreenConnect** (offline agents, file-transfer storms), **3CX** (license/trunk/SIP), **MailStore** (archive health), **Teramind** (DLP / insider-threat), and **Jian self-monitoring**

ROADMAP — COMING VIA THE JIAN REMOTE AGENT (NOT YET LIVE)

Built and waiting for data — **not marketed as live**. The Jian Remote Agent (an Edge collector) extends Jian past the API layer:

OS Fleet

Windows / macOS / Linux endpoint & server telemetry collected at the edge.

Network Devices

Switches, Wi-Fi APs, VoIP phones, printers, and UPS via on-site SNMP collection.

PRICING — 40% OF NAME-BRAND, EVERY LINE

Pay per user. Pay per resource.

Per-user for the people layer, per-resource for everything you have — transparent, published, and roughly **40% of the equivalent name brand**.

PER-USER — JIAN FOR M365 (3 TIERS + ENTERPRISE)

TIER	MONTHLY	ANNUAL (2 MO FREE)	POSITION
Jian Core	\$9 / user / mo	\$90 / user / yr	Land tier — autonomous 24×7 platform
Jian Plus MOST POPULAR NEW	\$16 / user / mo	\$160 / user / yr	Real-time SIEM, priority routing, expanding Tier-1 catalog
Jian Compliance	\$24 / user / mo	\$240 / user / yr	CMMC + custom frameworks, CISSP CSM, 99.5% SLA
Enterprise / MSP	Contact sales	Custom + multi-year	White-label, multi-tenant, NFR

25 seats / \$299/mo platform minimum. Also available: Jian Teams Bot Only — \$99/mo flat (≤25 users; @Jian Teams bot only, no platform).

PER-RESOURCE ADD-ONS — THE EXPANSION ENGINE

SERVICE	MONTHLY	ANNUAL	NAME-BRAND COMP	% OF COMP
Jian for Firewall (per Sophos/Meraki firewall)	\$99	\$990/yr	Arctic Wolf \$300–500/site	20–33%
Jian for SQL Server (per instance) NEW	\$99	\$990/yr	(no clean comp)	—
Jian for vCenter (per vCenter Server)	\$99	\$990/yr	VMware vROps Premium \$150+	66%
Jian for Meraki Network (per Meraki org)	\$79	\$790/yr	Auvik \$250/site	32%
Jian for Network / SNMP (per site) NEW	\$79	\$790/yr	Auvik \$250/site	32%
Jian for Backup (Veeam + NAKIVO , per env)	\$59	\$590/yr	Liongard \$50–100 (no NAKIVO)	59–118%*
Jian for DNS (per Umbrella tenant)	\$39	\$390/yr	Cisco Umbrella add-ons \$80+	49%
Jian for Web / Cloudflare (per zone)	\$29	\$290/yr	Cloudflare paid + labor	~40%
Jian for Endpoint EDR — Workstation (overlay)	\$1.50	\$15/yr	Huntress \$6	25%
Jian for Endpoint EDR — Server (overlay)	\$3.50	\$35/yr	Huntress \$6 / CrowdStrike \$10–15	23–58%

* Backup is the one disclosed exception to the 40% rule — Liongard is already cheap and doesn't cover NAKIVO. Jian wins on vendor-agnostic coverage, not raw price.

STARTER BUNDLES (FLAT-PRICE ALTERNATIVE)

Jian Starter Core 25 seats + 1 firewall + 1 backup	\$349/mo itemized \$383
Jian Pro ★ Compliance 50 + 2 FW + 1 backup + 1 Meraki	\$1,495/mo itemized \$1,615
Jian Enterprise Compliance 100 + 3 FW + 1 backup + 2 Meraki + 1 DNS	\$2,695/mo itemized \$2,953

TWO DISCOUNT MECHANICS (STACK)

17% off

Annual prepay (2 months free) — any service, tier, or bundle.

10–25%

Volume tier, auto-applied on monthly invoice total: 10% at \$1k, 15% at \$5k, 20% at \$15k, **25% at \$50k+**.

**14-Day Full-Feature Trial**

No credit card. Rivals don't offer this.

**Free "Jian Watch"**

Watch one resource free, forever — upgrade to act.

THREE WORKED EXAMPLES (ARITHMETIC VERIFIED)

PROFILE	BUILD	MONTHLY	VS NAME-BRAND
Small — 20-user law firm	Core 25×\$9 (\$225) + 1 FW (\$99) + 1 backup (\$59)	\$383	~\$960 → 40%
Medium — 50-user dental (HIPAA)	Compliance 50×\$24 (\$1,200) + 2 FW (\$198) + 2 Meraki (\$158) + 1 backup (\$59) = \$1,615, −10% volume	\$1,453	~\$5,550 → 26%
Mid-market — 250-user multi-site	Compliance 250×\$24 (\$6,000) + 5 FW (\$495) + 3 Meraki (\$237) + 2 backup (\$118) = \$6,850, −15% volume	\$5,822	~\$28,350 → 21%

WHY TECHNIJIAN

The challenger brand for AI IT operations.

Same protection as the name brands, at **~40% of the price** — with pricing you can actually read before you buy.

40% of Name-Brand Price

The same playbook as our private cloud: every line listed at ~40% of the equivalent name brand — Arctic Wolf, Auvik, Vanta, Huntress — beaten on price-per-line.

One Platform, Not a Stack

40+ platforms correlated into one MITRE-tagged brain — replacing a drawer full of single-purpose tools and their separate invoices.

Evidence, Never Assumptions

Every alert maps to MITRE ATT&CK. Every decision writes to an append-only log. Every evaluator returns evidence — or says **"unknown."**

Gated Autonomy You Can Trust

Jian opens tickets and proves its calls first. Client-platform fixes require clean traces, per-op approval, and a rollback path — never a silent change.

Vendor-Agnostic Backup

Jian for Backup covers Veeam (VBR + 365 + ONE) and **NAKIVO** — one price, one report, one audit trail. Liongard doesn't do NAKIVO.

Built for MSP Scale

Per-user + per-resource mirrors the Pax8 / Sophos Central model. Multi-tenant, white-label, with volume discounts to 25%. Land small, expand fast.

THE HIDDEN-PRICING FIELD

- ✗ "Contact us for a quote" — no published price
- ✗ Per-seat minimums and annual lock-in buried in the MSA
- ✗ Each tool a separate vendor, contract, and invoice
- ✗ No free trial — a sales call before you see the product

THE TECHNIJIAN WAY

- ✓ Every line item published — right here on this page
- ✓ Month-to-month available; annual saves 17%, never required
- ✓ One platform, one invoice, one MITRE-tagged audit trail
- ✓ 14-day trial + free Jian Watch — see it before you pay

Start your 14-day trial — no credit card

Tell us how many users, firewalls, and sites — we'll stand up your trial and send a custom quote, every line at **~40% of name-brand**. Or start free with Jian Watch on one resource.
