

Brand promise: 40% of name-brand price. Same protection. One platform. Every line item is anchored at roughly 40% (or less) of the equivalent name-brand competitor — the same playbook Technijian runs on private cloud vs. AWS/Azure.

PER-USER — JIAN FOR M365 (THE PEOPLE / IDENTITY LAYER)

TIER	MONTHLY	ANNUAL (2 MO FREE)	INCLUDES
Jian Core — land tier	\$9/user/mo	\$90/user/yr	Autonomous 24×7 monitoring + triage + ticketing, @Jian Teams self-service bot, branded monthly report, baseline compliance evidence (HIPAA / SOC 2 / PCI), MITRE-tagged events, SIEM correlation.
Jian Plus ★ MOST POPULAR	\$16/user/mo	\$160/user/yr	Everything in Core plus real-time cross-platform SIEM correlation, priority shift-aware routing, an expanding Tier-1 auto-remediation catalog (gated — see p.4), weekly reporting, lite custom @Jian skills.
Jian Compliance WAS COMPLIANCE PRO	\$24/user/mo	\$240/user/yr	Everything in Plus plus CMMC + custom frameworks (SOX / GLBA / FINRA / NIST 800-171 / FedRAMP), dedicated CISSP-certified CSM, 99.5% SLA, cross-client correlator, audit-firm liaison, on-demand reports.
Enterprise / MSP	contact sales	custom + multi-year	White-label, multi-tenant, NFR licensing for partners and large estates. Volume + multi-year terms.

Platform minimum: 25 seats / \$299/mo. • Jian Teams Bot Only — \$99/mo flat (≤25 users; @Jian Teams bot only, no platform monitoring, no compliance, no reports — above 25 users, upgrade to Core). Grandfathering for legacy \$49 bot-only customers on p.3.

PER-RESOURCE ADD-ONS — THE EXPANSION ENGINE (10 SKUS)

JIAN SERVICE	MONTHLY	ANNUAL	NAME-BRAND COMP	% OF COMP
Jian for Firewall (per Sophos / Meraki firewall)	\$99/mo	\$990/yr	Arctic Wolf \$300–500/site	20–33%
Jian for SQL Server (per instance) ★ NEW	\$99/mo	\$990/yr	no clean comp — was unsold	—
Jian for vCenter (per vCenter Server)	\$99/mo	\$990/yr	VMware vROps Premium \$150+	66%
Jian for Meraki Network (per Meraki org)	\$79/mo	\$790/yr	Auvik \$250/site	32%
Jian for Network / SNMP Monitoring (per site) ★ NEW	\$79/mo	\$790/yr	Auvik \$250/site	32%
Jian for Backup (Veeam + NAKIVO, per env)	\$59/mo	\$590/yr	Liongard \$50–100 (no NAKIVO)	59–118%*
Jian for DNS (per Umbrella tenant)	\$39/mo	\$390/yr	Cisco Umbrella add-ons \$80+	49%
Jian for Web / Cloudflare (per zone)	\$29/mo	\$290/yr	Cloudflare paid + labor	~40%
Jian for Endpoint EDR — Workstation (overlay)	\$1.50/mo	\$15/yr	Huntress \$6	25%
Jian for Endpoint EDR — Server (overlay)	\$3.50/mo	\$35/yr	Huntress \$6 / CrowdStrike \$10–15	23–58%

* Backup is the one disclosed exception to the 40% rule. Liongard is already cheap AND doesn't cover NAKIVO — Jian wins on vendor-agnostic coverage (Veeam VBR + 365 + ONE and NAKIVO at one rate, one report), not on raw price. We always disclose it.

STARTER BUNDLES — FLAT-PRICE ALTERNATIVE TO ITEMIZED

BUNDLE	INCLUDES	FLAT PRICE	VS. ITEMIZED
Jian Starter	Core 25 seats + 1 firewall + 1 backup environment	\$349/mo	itemized \$383 (saves \$34)
Jian Pro ★ MOST COMMON	Compliance 50 seats + 2 firewalls + 1 backup + 1 Meraki org	\$1,495/mo	itemized \$1,615 (saves \$120)
Jian Enterprise	Compliance 100 seats + 3 firewalls + 1 backup + 2 Meraki + 1 DNS tenant	\$2,695/mo	itemized \$2,953 (saves \$258)

Bundles are the path for the buyer who wants one number. The rep offers either: "Quote it line-by-line, or pick a bundle."

DISCOUNTS — JUST TWO MECHANICS (STACK MULTIPLICATIVELY)

17% off

Annual prepay — 2 months free; any service, tier, or bundle.

10-25% off

Volume tier, auto-applied on the monthly invoice total — 10% at \$1k–\$4,999 • 15% at \$5k–\$14,999 • 20% at \$15k–\$49,999 • 25% at \$50k+.

Note

Backup line exception — 59–118% of Liongard (not 40%) because Liongard is already cheap AND skips NAKIVO. Disclosed up-front.

Canonical worked example: a \$5,000/mo client on annual prepay pays $\$5,000 \times 0.85 \text{ (volume)} \times 0.83 \text{ (annual)} = \text{\$3,528/mo effective}$. A CFO verifies it in ten seconds.

RISK-FREE ENTRY — TRY BEFORE YOU BUY (RIVALS DON'T OFFER THIS)

🕒 14-Day Full-Feature Trial

No credit card. Every Plus / Compliance feature unlocked for two weeks — real monitoring on your real stack, not a sandbox demo. See the tickets, the reports, and the audit trail before you commit a dollar.

👁️ Free "Jian Watch" — Forever

Point Jian at ONE resource (e.g., a firewall) and watch it read-only, free, forever. You see what Jian sees at zero cost; upgrade to a paid SKU the moment you want it to act.

Both motions land the prospect with proof, not promises. "Jian Watch" is the lowest-friction first touch in the market — an evergreen, no-card foot in the door.

RESOURCE DEFINITIONS (GLOSSARY)

TERM	DEFINITION — WHAT COUNTS AS ONE BILLABLE UNIT
Firewall	One managed Sophos or Meraki firewall appliance. An HA pair = 1 unit. Multi-WAN on one appliance = 1 unit.
SQL Server instance	One Microsoft SQL Server instance, regardless of database count on that instance.
Meraki organization	One Meraki dashboard org, regardless of network or device count.
Network / SNMP site	One physical site polled over SNMP (switches, APs, UPS, printers, etc.) regardless of device count.
Backup environment	One Veeam VBR / 365 / ONE instance OR one NAKIVO Director. Mix and match at \$59 each.
Cloudflare zone	One apex domain (e.g., example.com). All subdomains included free.
vCenter	One vCenter Server instance. Enhanced Linked Mode counts as 1 per PSC.
Licensed user	One paid Microsoft 365 license (excludes shared mailboxes, room accounts, guests).

WORKED EXAMPLES — THREE REAL CLIENT QUOTES

SMALL • 20-USER LAW FIRM

\$383/mo

Core 25 × \$9 (\$225) + 1 firewall (\$99) + 1 backup (\$59)
vs. ~\$960 name-brand stack

Jian at 40%

MEDIUM • 50-USER DENTAL, HIPAA

\$1,453/mo

Compliance 50 × \$24 (\$1,200) + 2 FW (\$198) + 2 Meraki (\$158) + 1 backup (\$59)
= \$1,615, -10% volume
or Jian Pro bundle \$1,495 flat
vs. ~\$5,550 name-brand stack

Jian at 26%

MID-MARKET • 250-USER MULTI-SITE

\$5,822/mo

Compliance 250 × \$24 (\$6,000) + 5 FW (\$495) + 3 Meraki (\$237) + 2 backup (\$118) = \$6,850, -15% volume
vs. ~\$28,350 name-brand stack

Jian at 21%

All examples are **monthly**. Annual prepay saves another 17% on top. Labor savings (not shown above) typically add 14–90 tech-hrs/mo of recovered capacity depending on estate size.

GRANDFATHERING & LEGACY SKUS

SITUATION	POLICY
Existing \$49/mo IT Self-Service Agent customers	Grandfathered for 24 months at \$49 for the original bot-only feature set. Any upgrade to platform monitoring moves to V4 per-user pricing (Core / Plus / Compliance).
Report-only buyers (no platform)	Legacy standalone SKUs retained: My M365 Report \$15–\$129/tenant/mo (5 bands), My Meraki Report \$150/org/mo, My Sophos Report \$99 / \$199 / \$299/tenant/mo. Platform subscribers get equivalent reports auto-included.

THE FOUR FUNCTIONS & CADENCE

- Alert** — real-time critical-event detection. **Every 15 min** (lower tiers 30m–6h) → opens a P1/P2 Client-Portal ticket + Teams channel + Adaptive Card.
- Diagnose** — the AI judgment pass: reads the day's data, decides what warrants a ticket + recommended fix + MITRE tag. **Daily 14:00** (or at Alert cadence on critical platforms).
- Activity** — daily roll-up into a per-client posture summary. **Daily 14:30** → feeds monthly reports, the SIEM correlator and the learning loop.
- Counts** — usage/license reconciliation (observed vs. billed) to surface under-billing & license waste. **Observed daily 05:00; billed monthly**.

SIEM / CORRELATION 858 MITRE TECHNIQUES

- MITRE ATT&CK:** 858 techniques • 15 tactics • 189 threat groups • 824 software, refreshed **daily 02:00** from the official MITRE STIX bundle.
- Real-time** every 15 min (1-hour window) → P1 the moment a critical correlation crosses threshold. **Retrospective daily 14:30** re-scans the **prior 7 days** against the fresh catalog (catches slow-burn campaigns).
- Correlates 5 sources:** Inky, Sophos, M365 Security (sign-in), CrowdStrike, Huntress — kill-chain scored by how many distinct tactics fired.
- Inky phish → M365 risky sign-in → CrowdStrike PowerShell → Huntress task → **CRITICAL coordinated-attack ticket**

COMPLIANCE ENGINE 31 EVALUATORS • 5 FRAMEWORKS

- Frameworks:** HIPAA, SOC 2, CMMC, PCI-DSS + Technijian baseline. Compliance tier adds SOX / GLBA / FINRA / NIST 800-171 / FedRAMP.
- Alert mode** — 6 critical-breach evaluators **every 15 min** (MFA disabled, audit log off, CA policy disabled, DMARC reverted, new mailbox forwarding rule, new Global Admin).
- Diagnose** — all 31 evaluators **daily 03:00**. **Activity** — pass/fail by framework **daily 14:30**.
- Produces:** framework-tagged evidence, a branded monthly compliance report (DOCX), and an append-only tamper-evident audit log. Evaluators return “unknown” when they can't prove a result — *Jian never claims a control passes without evidence*.

HOW JIAN COMMUNICATES

- Email** (MS Graph, from jian@technijian.com) — daily Morning Summary (07:00), rich-HTML security alerts (MITRE map + IP-geo table + AADSTS codes in plain English + what Jian did + next steps), user-direct notices, weekly autonomy report (Mon 07:00).
- Microsoft Teams — the @Jian bot** — channel-per-ticket (auto-creates, renames [CLOSED] + archives on close), Adaptive Cards, a dedicated “Jian Alerts” channel, two-way chat, and a self-service assistant on a per-client RAG brain. **Live in 99 of 100 client Teams tenants**.
- Client Portal tickets** — idempotent (never double-files), forensic context, shift-aware routing (India-primary / US-fallback, L2/L3 escalation), automatic billable time entries.

Remediation is gated by design. Jian opens tickets — it does not silently fix client systems. The only live autonomous actions are Jian self-healing its own platform and M365 session revocation on confirmed account takeover (plus a small fixed catalog of reversible infra actions). Every client-platform Tier-1 fix requires 7 days of clean diagnose traces matching what techs did (≥95%), explicit per-op approval, and a tested rollback path; the first (Sophos firewall) is roadmapped 2026 Q2. Jian shows you a documented audit trail proving it would have made the right call — N times — before it is ever empowered to act. (It emails the malicious-IP list for manual block; Microsoft blocks programmatic IP-blocking, so only session-revoke is automated.)

COMPLETE LIVE DATA-SOURCE CATALOG (BY LAYER)

LAYER	SOURCE(S) — WHAT FLOWS IN
Identity / M365	M365 Security (risky/failed sign-ins, spray, impossible travel, MFA), Admin/Entra (app-cred expiry, PIM, CA state), Compliance (Secure Score, MFA%, audit-log), Storage, License (+ Pax8 reconcile), Apps service-health — 22 workloads end-to-end.
Email security	Inky Phish Fence (phishing, BEC, brand impersonation, user-reported, link-clicks), EasyDMARC (DMARC/SPF/DKIM posture, new sending sources).
Endpoint / EDR	CrowdStrike Falcon (malicious PowerShell, credential dumping, lateral movement, beacons), Huntress (persistence, webshells, malicious scheduled tasks, NOC escalations).
Network / firewall	Sophos Firewall (IPS, brute force, geo-blocks, port scans), Meraki (switch/AP health, IDS/IPS, WAN failover, config drift), OpManager (device/interface alarms), Cisco switching (port-channel/LACP, drift).
DNS	Cisco Umbrella (DNS-layer blocks, malicious-category lookups, roaming-agent drift).
Web / edge	Cloudflare (WAF hits, L7 bot/DDoS, cert expiry, zone health).
Backup / DR	Veeam (VBR + 365 + ONE — failed sessions, malware findings, repo runaway) + NAKIVO (per-job status, unprotected backups, transporter load + self-heal) — vendor-agnostic.
Database	Microsoft SQL Server (instance/DB health, failed jobs, blocking, backup/log status).
Virtualization	vCenter (host/datastore/VM health).
Remote / Voice / DLP	ScreenConnect (offline agents, stale sessions, file-transfer storms), 3CX (license/trunk/SIP), MailStore (archive health), Teramind (DLP / insider-threat).
Jian self-monitoring	The Jian platform itself — self-heals; never files a client ticket.

ROADMAP — BUILT, WAITING FOR DATA (NOT YET LIVE): OS fleet (Windows / macOS / Linux) and network devices (switches, Wi-Fi APs, VoIP phones, printers, UPS) via the Jian Remote Agent (Edge collector); a client-facing read-only dashboard; auto-generated signed compliance PDFs; and Jian Voice as a paid add-on.
