

My Jian AI Agent — Pricing Strategy

The structure is right. The anchor is wrong, and money is on the table. Keep the hybrid value metric, re-anchor the story to the real category, and monetize what's already built but unsold.

Competitor data fetched 2026-06-15

01 EXECUTIVE SUMMARY

My Jian is an **autonomous 24x7 AI IT-operations / SOC agent** — 36 diagnose + 31 remediate agents across 43 platform routes, MITRE + cross-platform SIEM correlation, 31 compliance evaluators, 58 live clients, ~28K LLM decisions/day with 99.6% gated to \$0. Priced today (V3.1) as a hybrid **per-M365-user (\$9 / \$24) + per-resource** (firewall \$99, backup \$59...), anchored at *"40% of name-brand."* The internal engineering model instead values each agent **floor (token) → ceiling (labor), \$150–500/agent**.

~\$0.30/client/mo

STEADY-STATE TOKEN COGS

85–92%

TARGET GROSS MARGIN

~\$250/client/mo

CONSERVATIVE LABOR SAVED

\$20–378K/yr

WHAT AI-SOC RIVALS CHARGE

The single most important finding

Jian is priced against the wrong competitive set. V3.1 benchmarks MSP point-tools (Auvik \$250, Liongard \$50–100, Huntress \$6). Jian's **true category is agentic AIOps / AI-SOC**, where comparable capability costs **\$20K–\$378K/yr** (Prophet \$20–42K, Dropzone \$36K, Torq \$59–378K, Microsoft Security Copilot ~\$105K, Arctic Wolf \$80–96K, Moveworks/Aisera \$90–130K+). A typical Jian client at \$383–\$5,822/mo sits at **5–25% of comparable** — the value story is **2–5x stronger than the collateral claims**.

The seven moves

- 1. **Keep the hybrid value metric** (per-user + per-resource). Keep **per-agent internal** — it's a costing tool that *sets* resource prices, not a buyer metric.
- 2. **Re-anchor the value narrative to AI-SOC**, not MSP tools. The receipts justify it.
- 3. **Monetize what's built but unsold** — the mssql agent models **~\$1,272/client/mo** of labor value and has **no SKU**. Add **Jian for SQL Server + Network/SNMP Monitoring** now.
- 4. **Add a middle tier** — \$9 → \$24 is a 2.7x cliff with no "land here". Insert **Jian Plus \$16/user/mo**.
- 5. **Formalize the MSP / white-label wholesale program** as a named SKU — the channel is wide open.
- 6. **Protect the small-account floor** — bare 25-seat Core = \$225 < \$165–315 cost-to-serve. Set a **\$299/mo platform minimum**.
- 7. **Hold list low for deliberate land-grab** — then raise on a **published cadence** as reference customers accrue.

LEVER	TODAY (V3.1)	RECOMMENDED
Per-user tiers	2 (\$9 / \$24)	3 (\$9 / \$16 / \$24) + Enterprise/MSP anchor
Resource SKUs	8	10 (+ SQL Server \$99, + Network/SNMP \$79)
Value anchor	"40% of MSP name-brand"	"A fraction of a \$100K AI-SOC — with the receipts"
Entry motion	ad-hoc pilot	14-day full trial + free "Jian Watch" tier
MSP channel	discount footnote	named white-label wholesale program
Floor protection	25-seat min (\$225)	\$299/mo platform minimum
Expansion	seats + resources	+ tier upgrades + frameworks + Autopilot + MSP growth

02 THE VALUE METRIC — KEEP THE HYBRID, KEEP PER-AGENT INTERNAL

The value metric is the single highest-leverage decision. Scored against the standard test, the **two-axis hybrid wins**: per-M365-user for the identity layer, per-monitored-resource for the infrastructure layer. The per-agent model fails the buyer-facing tests but is invaluable internally.

TEST	PER-USER	PER-RESOURCE	PER-AGENT (INTERNAL)
Aligned with value	🕒 people layer only	• tracks the work	🕒 seller-framed
Predictable	•	•	🕒
Scalable (NRR engine)	• seats grow	• estate grows	✗ finite agent types
Simple (one sentence)	•	• per line	✗ buyers don't know "agents"
Measurable	• license count	• auto-counted	•
Verdict	Keep — identity	Keep — infra + NRR	Internal only

Why per-agent stays internal — but earns its keep: the floor→ceiling model is the right tool to set resource list prices and to catch under-monetized capability. It already surfaced the biggest gap — the **mssql agent's ~\$1,272/client/mo labor value with no retail SKU**. Translate ceilings into resource prices; never put "per agent" on a quote.

03 RECOMMENDED PRICING — 3 TIERS + AN ANCHOR

JIAN CORE

\$9/user/mo

\$90/user/yr · 25-seat / \$299 min

Any SMB wanting 24×7 coverage — the land magnet

- Autonomous monitoring, triage, ticketing
- @Jian Teams bot
- Branded monthly report
- Baseline compliance (HIPAA/SOC2/PCI)
- MITRE-tagged events

★ MOST POPULAR · NEW

JIAN PLUS

\$16/user/mo

\$160/user/yr · the target tier

Growing / multi-platform SMB — "act, don't just alert"

- Everything in Core, plus:
- Real-time cross-platform SIEM correlation
- Priority shift-aware routing
- Expanding Tier-1 auto-remediation
- Weekly reporting + lite custom skills

JIAN COMPLIANCE

\$24/user/mo

\$240/user/yr

Regulated verticals — HIPAA/CMMC/finance/gov

- Everything in Plus, plus:
- CMMC + custom frameworks (SOX/GLBA/NIST/FedRAMP)
- Dedicated CISSP CSM
- 99.5% SLA + audit-firm liaison
- Cross-client correlator, on-demand reports

500+ seats or an MSP reselling Jian? → Enterprise / MSP (contact sales): white-label, multi-tenant, NFR, volume & multi-year.

Resource add-ons — the expansion engine (keep all 8, add 2)

JIAN SERVICE	PRICE	STATUS	NAME-BRAND COMP
Jian for Firewall (per firewall)	\$99/mo	keep	Arctic Wolf \$300–500
Jian for SQL Server (per instance)	\$99/mo	NEW — biggest gap (~\$1,272/client/mo value)	— (unsold today)
Jian for vCenter (per vCenter)	\$99/mo	keep	vROps Premium \$150+
Jian for Meraki Network (per org)	\$79/mo	keep	Auvik \$250
Jian for Network / SNMP (per site)	\$79/mo	NEW — OpManager agent	Auvik \$250
Jian for Backup (Veeam + NAKIVO)	\$59/mo	keep (disclosed exception)	Liongard \$50–100 (no NAKIVO)
Jian for DNS (Umbrella tenant)	\$39/mo	keep	Umbrella add-ons \$80+
Jian for Web / Cloudflare (zone)	\$29/mo	keep	CF paid + labor
Jian for Endpoint EDR — WS / Server	\$1.50 / \$3.50	keep	Huntress \$6 / CRWD \$10–15

Most resource SKUs carry 1.5–3× headroom vs the AI-SOC comparable. Hold for land-grab; raise on cadence. Bundles unchanged: Starter \$349 · Pro \$1,495 · Enterprise \$2,695. **Fix before next publish:** stale \$3,295 Enterprise reference in spec \$16 (operative = \$2,695) and the Price Sheet "V3.0" header mislabel.

04 WORKED EXAMPLES (arithmetic verified)

PROFILE	BUILD	MONTHLY	ANNUAL –17%	VS NAME-BRAND STACK	VS AI-SOC CATEGORY
Small — 20-user law firm	Core 25×\$9 (\$225) + 1 FW + 1 backup	\$383	\$3,818	40%	~10–38%
Medium — 50-user dental (HIPAA)	Compliance 50×\$24 + 2 FW + 2 Meraki + 1 backup = \$1,615, –10%	\$1,453	\$14,479	26%	~17% of MS Copilot
Mid-market — 250-user multi-site	Compliance 250×\$24 + 5 FW + 3 Meraki + 2 backup = \$6,850, –15%	\$5,822	\$58,007	21%	~45–73%

Conservative labor offset (~\$250/client/mo) covers the Small bill ~0.65×; by-size labor (\$1,050–9,000/mo) yields 1.4–5.7× ROI before any risk-reduction value.

COMPETITOR	MODEL / VALUE METRIC	ENTRY	MID	ENTERPRISE	PUBLIC?
Dropzone AI	flat / per AI analyst (investigations)	\$36K/yr	—	—	No
Prophet Security	usage / per investigation	~\$20K/yr	—	~\$42K/yr	No
Simbian	usage / per alert	\$10K/yr	—	—	AWS
Torq HyperSOC	base + per-workflow + agent-compute	~\$59K/yr	~\$86–179K	~\$274–378K	No
Microsoft Security Copilot	consumption (SCU/hr)	\$4/SCU/hr	~\$105K eval	\$0 w/E5 +\$6 overage	Yes
CrowdStrike Charlotte AI	credits, add-on to Falcon	—	—	—	No
Moveworks (→ServiceNow)	per-employee/yr	—	~\$130K ACV	\$1M+	No
Aisera (→Automation Anywhere)	per-seat → consumption	—	~\$90–108K/yr	\$200K–1.2M	No
Arctic Wolf (MDR)	quote / per user-node	~\$40K/yr	~\$80–96K	\$200–500K+	No
Vanta / Drata (compliance)	tiered / employees + frameworks	\$7.5–9.5K/yr	\$20–25K	\$57–60K+	No
My Jian	hybrid per-user + per-resource	\$383/mo	\$1,453/mo	\$5,822/mo	Yes — line-item

Insights

- **Opacity is the norm — transparency is Jian's moat.** 6/7 AI-SOC vendors hide prices; /pricing 404s are routine. Jian is the only player with published, verifiable, auto-true-up-able line items.
- **Nobody is openly priced below ~\$10K/yr.** Jian's \$4.6K/yr entry owns undefended white space.
- **Opaque units (SCU/credit/Assist) prevent comparison.** Jian meters on units the buyer counts — a trust win.

White space we take

- **Don't fight Microsoft on E5-bundled basic triage.** Win on non-MS estates, cross-platform correlation, deeper remediation, consolidation.
- **Absorb compliance.** Vanta/Drata charge \$20–25K/yr to watch evidence Jian already holds — bundle it.
- **Incumbents price *humans*.** Jian does the analyst work autonomously — far below their loaded rate at ~90% margin. Anchor to *work eliminated*.

The NRR engine — target >120%

VECTOR	TRIGGER
Seat growth	client hires
Resource attach/growth	M&A, new sites (Jian auto-detects)
Tier upgrade Core→Plus→Compliance	"want it to act" / audit
+Framework (CMMC, SOX...)	vertical requirement
Autopilot outcome add-on (V2)	remediation adoption grows
MSP-client growth	partner signs their clients

Surface upgrade nudges in the branded monthly report ("Jian found an unmonitored SQL instance"). Grandfather existing clients 12 mo on any raise; raise new-customer prices first.

Unit economics & guardrails

METRIC	VALUE	
Direct COGS/client/mo	~\$12 (LLM \$5 + infra \$7)	✓
Software gross margin	~95%	✓
Loaded cost-to-serve	\$165–315/client/mo	~
Blended GM (Yr-3)	85–92%	✓
Small-account floor	25-seat Core = \$225 < cost-to-serve	⚠ fix

Fix: set a **\$299/mo platform minimum** (or require ≥1 resource attach). Most clients attach already (Small = \$383); this closes the bare-Core loss case. Token COGS isn't the risk — amortized eng-maintenance is, and it *improves* with scale.

07 ROLLOUT — SEQUENCE THE CHANGES

WAVE	DO	WHY NOW
Now (zero-risk)	Add SQL Server + Network/SNMP SKUs · fix \$3,295/"V3.0" bugs · set \$299 minimum · publish 14-day trial + free Jian-Watch	pure upside, no existing-customer impact
Next (structural)	Launch the \$16 Plus tier (3-tier page) · re-anchor collateral to AI-SOC category · stand up MSP wholesale program	lifts blended ARPA & opens the channel
Then (optimize)	Run experiments #1/#3/#8, then #2 · Gabor-Granger on SQL/vCenter · publish the raise cadence	price to data, not to gut
V2 (capture)	Ship Autopilot outcome add-on · add work_type tag for true per-client margin	recapture automation value the category monetizes

Companion files: **pricing-page-mockup.md** (the 3-tier page + resource calculator + FAQ) and **pricing-experiments.md** (10 prioritized A/B tests — new visitors only, never renewal price).

Keep the magnet. Monetize the gaps. Anchor the story to the real category.

Jian already does the work of ~1.6 FTE across the fleet at ~\$0.30/client/mo in tokens. The job now is to price like the autonomous-SOC platform it is — transparently, so buyers can verify every line — and let seats, resources, tiers, frameworks, and the MSP channel compound into NRR >120%.
