

**AI GROWTH
BLUEPRINT**

Multipoint Network

Rare capability, near-zero visibility — and the AI growth engine to close the gap

PREPARED FOR

Multipoint Network, Inc. — Carter Busby

PREPARED BY

Technijian — technology as a solution

DATE

June 17, 2026

CONFIDENTIAL · PREPARED EXCLUSIVELY FOR MULTIPOINT NETWORK

How to Read This Blueprint

A quick, honest framing before anything else — because the cold note that started this conversation pitched the wrong thing.

- **This is not a pitch for managed IT.** You are an IT and software firm; you do not need an IT vendor, and you were right to say so. This blueprint is about something different: helping a firm that builds remarkable things get found and win more of the work it is uniquely good at.
- **It reports verified facts.** Everything stated about Multipoint Network is drawn from your own website, LinkedIn, and public records, and is cited in the Appendix. Client names are shown as the logos that appear on your site, not asserted as contracts. We have not assumed your revenue, headcount, or pipeline.
- **It turns unknowns into questions.** Where an answer requires information only your team has, we ask rather than guess. Section 13 is a short questionnaire that completes the analysis.

One thing we corrected for accuracy

Your public footprint is split: directories still show the older "managed IT services" Multipoint, while your current site (and the mpnet.ai identity) is a "Design. Build. Grow." software, AI/ML, and entertainment-infrastructure firm. We treat the current, rebranded positioning as the real one — and that repositioning is exactly what makes the visibility gap worth fixing.

Executive Summary

Multipoint Network is a small, founder-led Beverly Hills firm that has quietly become something rare: a boutique that designs and runs custom software, in-house AI/ML production systems, and entertainment-grade infrastructure for some of the most demanding clients in media — with SOC 2, CMMC, and TPN (the studios' content-security standard) behind it. The work is, by any measure, first-rate. The problem is that almost no one outside your existing relationships can tell.

The numbers below tell the whole story in one line — established, elite clients, remarkable proof, and a market presence that does not match any of it:

The opportunity is not capability — it is visibility. The MSP/IT-services industry says the firms that win are the ones that are vertically specialized, security-first, and AI-forward. Multipoint already is all three (media/entertainment; TPN/SOC 2/CMMC; real AI/ML). What the high-growth firms add is the one thing Multipoint is missing — a demand engine. Lead generation is the single most-cited growth constraint in this industry, and it is precisely the gap here: a thin website, ~122 LinkedIn followers, little search presence, and a flagship cost-reduction story (a published \$187K-to-\$3K cloud case) that almost no prospect ever sees.

So the blueprint is a growth engine, in two motions. First, get found: AI-era search and answer-engine optimization, authority content that finally surfaces your proof, and a storefront rebuilt to convert. Second, win named accounts: account intelligence and proposal automation aimed at studios, post houses, agencies, and media-tech — supporting your relationship-led sales, not replacing it. We are not here to out-engineer you; we are here to out-market for you.

The method is conservative on purpose. You will not find an invented revenue figure or a guessed ROI here — your financials are not public, so we cite none. Investment is shown as real, published Technijian service ranges; returns are modeled only after discovery calibrates them against your real pipeline and win rate (Section 13).

The one idea to carry into the conversation

You sit in the rarest quadrant in your market: high capability, low visibility. Your competitors are either visible-but-ordinary or scaled-but-generic. The move is not to build more capability — you have it — but to become as findable as you are good. That is a solvable problem, and a fast one.

01 What We Verified About Multipoint Network

Everything here is drawn from your own websites, LinkedIn, and public records (see Appendix). Client names appear as the logos shown on your site, not as asserted contracts.

A rebranded, AI-forward boutique

Your current site leads with "Design. Build. Grow." and the line "the team that built it runs it" — a software, AI/ML, and infrastructure firm, not a generic managed-IT shop. (Directories still carry the older managed-IT positioning; the live brand, on the mpnet.ai identity, is the rebranded one.) What we verified:

Attribute	Verified fact
What you do	Custom software / SaaS development, in-house AI/ML production systems (your site cites 24 production systems and a multi-stage ML pipeline), cloud migration (a notable Cloudflare practice), and 24/7 human-monitored operations. Terms advertised: month-to-month, free assessment, 4-hour response.
Security & compliance	SOC 2, CMMC, and TPN (Trusted Partner Network — the entertainment industry's content-security standard), with a stated "0 breaches" record.
Client logos shown	Warner Bros., Paramount Pictures, NBCUniversal, and Velaro — a clear media & entertainment lean, consistent with TPN.
Headquarters	Beverly Hills, CA (315 N Crescent Dr, per your signature). Greater Los Angeles service base.
Leadership	Brian D. Bloom, President (founder-operator); Norman Sternfeld, Business Development. Privately held, founder-led — no evidence of private-equity ownership.
Tenure & size	In business roughly 20 years (founded ~2003; one source says 2008). A small, senior team.
Revenue & headcount	Not publicly disclosed; broker figures conflict. We cite neither and treat both as discovery items.

What we have NOT assumed

We do not know, and have not guessed: your revenue or team size; whether the named studios are direct clients versus project or sub-vendor work; which brand (multipointnetwork.com or mpnet.ai) is the go-forward identity; how you generate leads today and your win rate; or the exact role of our contact, Carter Busby. These are the questions in Section 13.

02 The Capability-Visibility Gap

The central fact about Multipoint Network is a mismatch: the capability is rare and provable, and the market presence is almost nonexistent. The diagram makes it concrete.

What Multipoint Network Builds — and Who Can't Find It

A boutique with rare, provable capability serving the most demanding clients in media — and almost no market presence to match it.

Figure 02.0 — Rare capability and elite clients on one side; a thin, hard-to-find market presence on the other.

The proof is already there — it is just buried. Your own site states 99.97% uptime, 34,897 tickets handled, a 9-stage ML pipeline running 14 models, and a flagship cost-reduction case — moving a client from 421 Azure resources to Cloudflare Workers, cutting roughly \$187,000 a year to about \$3,000. Any one of those would be a standout proof point for a media-tech buyer. Together they are a remarkable story. Almost no prospect ever encounters it, because it lives behind a single-narrative website with no search footprint to speak of.

And the visibility side is genuinely thin. A LinkedIn company page with roughly 122 followers, little to no published content, no meaningful review presence, and a website that repeats the same single story regardless of where a visitor lands. For a firm trusted with studio-grade content security, that is a striking under-representation — and the clearest, lowest-cost place to start.

03 The Market & Why Now

The forces below are facts about the IT-services market Multipoint operates in — not claims about the company — and together they explain why a visibility investment pays now rather than later. Sources are in the Appendix.

The market is growing — and consolidating against small independents

Analysts project the global managed-services market growing at mid-single to mid-teens percent annually (estimates range roughly \$365B to \$731B+ by the end of the decade depending on the firm and scope), with managed security the fastest-growing segment (about +15% in 2025, per Canalys). But the field is fragmenting against small firms: an estimated 40,000+ US MSPs, 466 tracked MSP/MSSP acquisitions in 2025, and private equity in roughly 69% of disclosed deals are building roll-ups with scale and capital. A small independent does not win by out-scaling them; it wins by being unmistakably differentiated — and by being found.

The winners are specialized, security-first, and AI-forward — which Multipoint already is

Industry research is consistent that the three durable differentiators are vertical specialization (specialized firms report materially higher margins and command a price premium), a security-first posture (the vast majority of top-earning firms lead with managed security), and AI-forward delivery. Multipoint already has all three: a media/entertainment vertical, TPN/SOC 2/CMMC, and real AI/ML. The hard part is done. The missing piece is the one most firms in this market also miss.

That missing piece is demand generation

Lead generation is the single most-cited growth constraint among IT-services firms — one MSP-marketing study reports that the large majority of owners name it their number-one challenge — because most are run by technical founders who under-invest in marketing and rely on referrals until growth stalls. The buying-moment channel is search: when a prospect needs a Cloudflare migration, studio-grade infrastructure, or an AI/ML build, they search — and increasingly they ask an AI assistant. A firm with real proof but no search or content footprint simply is not in those answers. That is the gap this blueprint closes.

Why this matters now

A growing market, consolidating against independents, rewards the differentiated firm that can be found. Multipoint has the differentiation already; the window is to convert it into visibility and pipeline before a competitor with half the capability and twice the marketing takes the share that should be yours.

04 Where the Growth Lives

For a high-capability, low-visibility firm, growth is not a single funnel — it is three connected moves, each supported by AI without changing the relationship-led nature of the business.

Move	What it looks like for Multipoint	Front
Get found	Be the cited answer in search and AI assistants for your niche — Cloudflare migration, studio-grade / TPN-compliant infrastructure, AI/ML builds for media — and surface the proof you already have.	Growth
Capture & convert	Turn visitors into qualified enquiries with a real funnel, an on-site AI assistant, and case studies that sell while you sleep — instead of a single brochure page.	Growth
Win named accounts	Account intelligence, proposal automation, and personalised outbound aimed at a named list of studios, post houses, agencies, and media-tech companies.	Growth
Package & scale	Productize bespoke engineering into named, marketable offers so growth does not bottleneck on the founder.	Integration

The first three moves are growth; the fourth makes growth durable. Notice what is not on this list: there is no "integrate AI into your delivery" line, because you already have that — your own AI/ML production systems are more advanced than most firms we would normally introduce to AI. The value here is the demand engine wrapped around the capability you have already built.

05 The Buyer Segments

Multipoint can win across a portfolio of media-and-tech buyers. The matrix maps the archetypes by deal volume and value per engagement — archetypes to calibrate at discovery, not your account list.

Figure 05.0 — Where AI-assisted, relationship-led growth has the most impact. Bubble size approximates value per engagement.

Segment	What they need	How the engine reaches them
Studio / network IT & security	Content-secure, audited infrastructure and a partner who already speaks TPN/CMMC.	Account-based outbound + authority content on studio-grade security.
Production / post house	Reliable, secure pipelines under deadline pressure.	Niche AEO/SEO + proof-driven case studies.
Enterprise media infrastructure	Cost control and resilience at scale (the Cloudflare story).	The \$187K-to-\$3K case as flagship content + ABM.

Segment	What they need	How the engine reaches them
Agency / creative shop	A technical partner who can build, not just advise.	Search visibility + referral and partner content.
Media-tech / SaaS	Custom software and AI/ML they cannot staff in-house.	AEO for "AI/ML build" queries + capture funnel.

Honest framing

These are research-based archetypes, not your CRM. Which segments matter most — by volume, by margin, by growth priority — is a discovery question. We would rather build the plan around your real book of business than around our assumptions about it.

06 Competitive Landscape

The useful way to read Multipoint’s position is not by size but by two axes: technical capability and market visibility. On that map, Multipoint sits where almost no one else does.

Figure 06.0 — A strategic assessment (not a measured score). The top-left — real capability, almost no visibility — is rare, and fixable.

Competitor type	Where they sit	The contrast with Multipoint
PE-backed consolidators	High visibility, broad capability, large scale.	Out-market and out-scale small firms — but generic; rarely studio-grade or AI-native.
Marketing-led / generic MSPs	High visibility, ordinary capability.	Win local search with weaker delivery — they are seen but not special.
Boutique dev / AI agencies	Strong capability, moderate visibility.	Closest peers — but few combine software, AI/ML, AND entertainment-grade security.

The white space

The consolidators are visible but generic; the local MSPs are visible but ordinary; the boutique agencies rarely combine your exact mix (software + AI/ML + TPN-grade security + a real Cloudflare practice). Multipoint owns a genuinely differentiated position — it is simply in the "strong but invisible" corner. The entire job of this plan is to move it rightward into "seen and strong," where its capability finally translates into pipeline.

07 Brand & Digital Presence Audit

A factual read of Multipoint’s public footprint as observed in June 2026. The point is not criticism — it is that the distance between the quality of the work and the quality of its presentation is the opportunity.

Asset	What we observed	Opportunity
Website	A well-designed but content-thin, single-narrative site (Wix); much of it repeats the same Azure-to-Cloudflare story regardless of page. Two identities in play (multipointnetwork.com + mpnet.ai).	Rebuild to convert; pick one brand.
Search / AEO	Little evident optimization for the high-intent queries your buyers run, or for citation by AI assistants.	Own your niche in search + AI answers.
Content / proof	Remarkable proof (the cost-reduction case, uptime, the ML pipeline, TPN) is buried; no real content engine.	Turn proof into authority content.
LinkedIn	Roughly 122 followers; the company size band is mis-set; activity is light.	A real, consistent presence.
Reviews / reputation	No meaningful Google/Yelp review footprint surfaced.	Build visible social proof.

The most quotable finding

A firm trusted with content security for major studios — holding TPN, SOC 2, and CMMC, running its own AI/ML production systems, with a published case that cut a client’s cloud bill by ~98% — has about 122 LinkedIn followers and almost no search presence. That is not a capability problem. It is a visibility problem, and visibility problems are the fast kind to fix.

08 Technijian Capability Proof

You build remarkable things; we will not pretend to out-engineer you. What we bring is the demand engine — and we have built every piece of it. Each capability below is real, mapped to your situation. Where a build is described by an industry profile rather than a named client, it is scope and effort only.

Proven build: Multi-Agent SEO + AEO Platform

What we built: a multi-model platform (Claude, GPT, Gemini + MCP, SEMrush, GA4, Perplexity) that produces and optimises authority content and tracks whether AI assistants cite you. How it applies: make Multipoint the cited answer for "Cloudflare migration," "studio-grade IT," and "AI/ML for media" — and surface the proof you already have.

Proven build: AI Lead-Gen & Account Intelligence

What we built: an AI lead-generation engine that enriches and scores target accounts, monitors triggers, and drafts personalised outreach. How it applies: a named target list of studios, post houses, agencies, and media-tech, worked by AI and closed by your team.

Proven build: AI-Native Software Delivery (My Dev)

What we built: an AI-native development practice that ships 3–5x faster. How it applies: a conversion-built site, a lead-capture funnel, and an on-site AI assistant — and a way to productize your bespoke engineering into repeatable offers.

Proven build: AI Content Factory + Knowledge Graph

What we built: a routed content pipeline and Weaviate/Obsidian knowledge systems. How it applies: turn each Multipoint win into a reusable, searchable case study, and make two decades of institutional know-how a marketing asset instead of tribal memory.

Two honest guardrails (because you will ask)

Cost: we run a routed, multi-model platform (roughly seven models across three vendors and three tiers) and send each task to the cheapest model that can do it well — typically 60–

80% below the cost of routing everything to one premium model. **Control:** AI drafts, finds, and triages; a human approves every piece of outbound and owns your brand voice. The 2024 Moffatt v. Air Canada ruling — where a company, not its chatbot, was held liable for an answer the bot invented — is exactly why nothing customer-facing ships without a person's sign-off.

09 The AI Growth Engine

Three connected columns: get found for what you already do, convert the traffic into qualified pipeline, and win the named media accounts. Each names the specific Technijian service that delivers it.

The Multipoint Network AI Growth Engine

Get found for what you already do (left); convert the traffic into qualified pipeline (centre); win the named media accounts (right).

* My SEO · My AI · My AI Lead Gen · My Dev. AI drafts, finds, and triages; a human approves every outbound and owns the brand voice — this augments the founder-led sales motion, it doesn't replace it.

Figure 09.0 — Get found (left); capture & convert (centre); win named accounts (right).

Capability	Use case for Multipoint	Technijian service
AEO / GEO for the niche	Be cited for Cloudflare migration, studio-grade IT, and AI/ML-for-media queries.	My SEO
Surface the proof	Turn the \$187K-to-\$3K case, uptime, and the ML pipeline into authority content.	My SEO
Storefront rebuild + capture	A conversion-built site and a real funnel instead of a single brochure page.	My Dev

Capability	Use case for Multipoint	Technijian service
On-site AI assistant	Answer prospect questions 24/7 and route serious enquiries to the team.	My AI
Account intelligence	Signal monitoring and dossiers on studios, post houses, agencies, and media-tech.	My AI
Proposal automation	Draft tailored proposals and SOWs fast; the team personalises and signs off.	My AI Lead Gen
ABM outreach	Personalised outbound to a named target list — not spray-and-pray.	My AI Lead Gen
Package the bespoke	Turn one-off engineering into named, marketable, repeatable offers.	My Dev

The non-negotiable

This augments your founder-led sales motion; it does not replace it. AI finds, drafts, and triages; a human owns the relationship and the brand voice and signs off on everything that goes out. For a firm whose reputation is content security and trust, that human-in-the-loop discipline is the only way AI is allowed to touch the pipeline.

10 Business Impact & Investment

We price from real, published service ranges and model returns only after discovery. No figure below is a quote, and none is presented as Multipoint’s guaranteed result.

A land-and-expand path

Phase	What it includes	Engagement type
Land — get found	AEO/SEO foundation, surfacing your proof as authority content, and a conversion-built storefront with a capture funnel.	My SEO + My Dev build
Expand — build demand	On-site AI assistant, case-study engine, account intelligence, and a named target list.	My AI + My AI Lead Gen
Scale — win accounts	ABM outreach + proposal automation, packaged offers, and a measured pipeline/ROI dashboard.	My AI Lead Gen + advisory

Market-typical investment ranges (context, not a quote)

Component	Published range	Note
My SEO — SEO + AEO + content	~\$2,000–\$3,000 / mo	recurring
My AI Lead Gen	Starter \$1,499 · Pro \$3,499 · Ent \$6,999 / mo	recurring
My Dev — site / funnel / assistant build	project-based	one-time build
AI growth advisory	scoped retainer	recurring

How we will model the return. For a firm with large average deal sizes and a tiny pipeline, ROI is modeled on qualified leads created, win rate, and average engagement value — not a guessed revenue number. A single new studio or enterprise-infrastructure engagement likely covers a year of the program many times over, which is why even a modest lift in visibility is high-impact here. We will put conservative, mid, and upside numbers against

those levers once discovery gives us your real figures (Section 13). Until then, any single ROI figure would be a guess, and we don't guess.

11 Implementation Roadmap

Staged so each phase pays for itself before the next begins — and sequenced to start with the lowest-risk, fastest wins.

Figure 11.0 — Get found, build the demand engine, then scale outbound. Targets calibrate at discovery.

Phase one fixes the foundation (positioning, technical and local SEO, a storefront rebuilt to convert) and surfaces the first authority content from real wins. Phase two adds the on-site AI assistant and capture funnel, then builds the named target list with account intelligence. Phase three runs ABM outbound with proposal automation, packages the bespoke work into offers, and stands up a measured pipeline/ROI dashboard so every claim in this plan is tracked against reality.

12 Quick Wins — Start This Week

Five actions Multipoint can take now, with no Technijian contract, that create value and set up the engagement:

- **Publish the \$187K-to-\$3K case as a real case study.** Your single best proof point currently lives as a stat on a homepage. Written up properly, it is a magnet for cost-conscious media-infrastructure buyers.
- **Fix the LinkedIn company page.** Correct the mis-set size band, sharpen the description to the rebrand, and post one real piece of work. A 20-year studio-grade firm should not read as a 122-follower unknown.
- **Pick one brand.** Decide whether multipointnetwork.com or mpnet.ai is the go-forward identity and point everything at it — split identities dilute every bit of visibility you build.
- **Claim and populate your review profiles.** Set up Google Business and ask one or two happy clients for a review. Social proof compounds, and you currently have almost none visible.
- **Name your five dream accounts.** Write down the five studios, post houses, or media-tech firms you would most like to win. That list is the seed of the account-based motion in this plan.

13 Questions to Complete the Analysis

This is the part that turns a research-based blueprint into a costed, calibrated plan. The answers — from a short conversation — replace every estimate above with your real numbers. "We're not sure" is a useful answer.

A · Business & goals

- What is the real growth goal — more studio/media accounts, more software/AI builds, a new vertical, or simply more of everything?
- Roughly how many new engagements a year do you win now, and what does an average engagement look like in size and length?
- Which brand is the go-forward identity — multipointnetwork.com or mpnet.ai?

B · How you grow today

- How do you currently get new clients — referrals, relationships, outbound, anything else?
- Who owns sales and marketing today, and is there any marketing budget or spend now?
- What is your rough win rate when you do get into a conversation?

C · Proof & positioning

- Are Warner Bros., Paramount, and NBCUniversal direct clients we can reference, or logos/project work we should describe carefully?
- Which capabilities do you most want to be known for — Cloudflare/infrastructure, custom software, AI/ML, or content-security?
- What recent wins (beyond the Azure-to-Cloudflare case) could become case studies?

D · Team & decision

- How big is the team, and who would own the relationship with a growth partner?
- Can you confirm Carter Busby's role, and who else weighs in on a decision like this?

- What would a successful first year look like — in pipeline, in named logos, in revenue?

The easiest way to answer

Most of these take a 30-minute conversation. We can also run a short, no-obligation visibility assessment — your current search footprint, AI-assistant citations, and the gap to your nearest visible competitor — and hand you the findings whether or not we work together.

14 What Happens Next

A low-commitment sequence that produces something useful at each step:

Step	What happens	Your commitment
1	A short conversation — walk this blueprint and the Section 13 questions. Peer to peer; you know the tech.	A call. No commitment.
2	A free visibility assessment — your search footprint, AI-assistant citations, and the gap to your nearest visible competitor.	None; the findings are yours.
3	Land-and-expand — start with get-found and the storefront; add the demand engine and outbound as each proves out.	You decide, with real numbers.

No pitch — just a useful read

You were right that you do not need IT services. This is a different conversation: how a firm that builds genuinely impressive things becomes as findable as it is good. If that is worth 30 minutes, we would value your read on this plan; if not, the visibility assessment is yours regardless.

Ravi Jain, Founder & CEO · rjain@technijian.com · 949.379.8499 · technijian.com

About Technijian

Technijian is an AI strategy, growth, and implementation firm founded in 2000 by Ravi Jain. We help technical companies turn real capability into demand — through AI-era search and answer-engine optimisation (My SEO), AI lead generation (My AI Lead Gen), and AI-native software and funnel development (My Dev) — and we architect, build, and operationalise through to production rather than handing over a slide deck. Our dedicated pod model assigns a named team to each client, with offices in Irvine, California and Panchkula, India for coverage across time zones. Our approach is cybersecurity-first and AI-forward, with private, governed deployments.

Appendix — Sources & What Remains to Confirm

What we verified vs. could not confirm

- Current rebranded positioning ("Design. Build. Grow."), services, SOC 2 / CMMC / TPN certifications, and the client logos shown (Warner Bros., Paramount, NBCUniversal, Velaro) — VERIFIED on the live site (multipointnetwork.com / mpnet.ai).
- Leadership (Brian D. Bloom, President; Norman Sternfeld, Business Development), Beverly Hills HQ, and ~20-year tenure — VERIFIED across the site, LinkedIn, and registry sources.
- Whether the named studios are direct clients vs. project/sub-vendor work; current revenue and headcount; founding year (2003 vs 2008); and Carter Busby's role — NOT confirmed; listed as questions.
- Digital-presence findings (thin site, ~122 LinkedIn followers, no review footprint) — observed from public profiles June 2026.

Selected sources

- Multipoint Network — live site, About, and case content: multipointnetwork.com / mpnet.ai; LinkedIn company page.
- Market — Grand View Research, MarketsandMarkets, Canalys / N-able MSP Horizons, Kaseya MSP Benchmark (managed-services size & growth, security as fastest segment).
- Consolidation — MSP M&A trackers (466 deals 2025; PE in ~69% of disclosed deals).
- MSP growth & marketing — MSP-marketing studies (lead-gen as the #1 owner-cited constraint); local SEO / AEO as the buying-moment channel.
- Differentiation — vertical-specialization, security-first, and AI-forward as the consensus differentiators (SuperOps, IRONSCALES, Kaseya).
- AI guardrails — human-in-the-loop best practice; Moffatt v. Air Canada (2024) on chatbot liability.

Market and industry figures are facts about the wider market; figures specific to Multipoint Network are intentionally deferred to discovery. Prepared by Technijian, June 17, 2026.
