01 Executive Summary

21+

Years of Facial Surgery

Dual

Board-Certified · RealSelf
Top Doctor

4.8★

Google — but only ~32
reviews

2

Growth Engines to Build

Robinson Facial Plastic Surgery is, by any clinical measure, an elite practice: Dr. Ernest B. Robinson is a dual board-certified, fellowship-trained facial plastic and reconstructive surgeon with 21+ years of results, a RealSelf Top Doctor, and an exclusive Allergan provider. The practice already runs a My SEO program. Yet two things hold the business below its potential — and both are fixable.

First, the digital reputation does not match the surgical one. The practice shows 4.8★ on Google but only about 32 reviews after 21 years, while the dominant Orange County names carry hundreds. Thousands of happy patients exist; they were simply never asked. Second — and the reason for this blueprint — is the question on the table: can AI Lead Gen grow the business? It can, but the honest answer depends on which of two growth engines you point it at.

This blueprint frames the practice around those two engines. Engine A is consumer demand capture — patients searching for procedures — which grows by extending the existing My SEO with GEO, on-site capture, consult-to-surgery nurture, and a reputation engine. Engine B is professional-referral growth — other practices that send surgical cases — and that is exactly where My AI Lead Gen fits: it harvests, scores, and courts the named referral universe (dermatologists, Mohs surgeons, med spas, and more). The plan builds Engine A first, then stands up Engine B.

The Core Opportunity — and the Honest Answer

Can My AI Lead Gen help? Yes — for the referral engine. It cannot (and should not) cold-prospect individual patients for elective surgery, but it is purpose-built to harvest and court the local practices that refer cases.

The fastest win is reputation: closing the 32-vs-hundreds review gap lifts every local ranking and the trust a patient feels at the moment they compare surgeons.

Dr. Robinson performs Mohs reconstruction — which makes every Orange County dermatologist and Mohs surgeon a natural, high-intent referral target the referral engine can pursue first.

Note on figures: the practice's internal metrics (consult volume and conversion, referral counts, average case value, current My SEO scope) were not available for this draft. Every projection below is labeled estimated and calibrates to real numbers after a short discovery call — the questions are listed in Section 14.

02 The Two Growth Engines

Every growth dollar for a facial plastic surgery practice comes from one of two engines, and they could not be more different in how they work. Confusing them is the most common — and most expensive — marketing mistake in aesthetics. This blueprint keeps them separate on purpose, because the right tool for one is the wrong tool for the other.

Two Growth Engines — and Where My AI Lead Gen Fits

Consumer growth = capture & nurture (build on the My SEO you already run). Referral growth = account-based lead gen.

Figure 2.0 — The Two Growth Engines, and where My AI Lead Gen fits

Dimension	Engine A — Consumer Demand Capture	Engine B — B2B Referral Lead Gen
Who	Individual patients researching a procedure	Other practices that send surgical cases
How they arrive	They search, compare, and deliberate (often for weeks)	A trusted provider refers them directly
Right motion	Be found, capture, nurture, and earn reviews	Harvest, score, and court named practices

Dimension	Engine A — Consumer Demand Capture	Engine B — B2B Referral Lead Gen
Right tools	My SEO (live) + GEO + Chat.AI + nurture + reputation	My AI Lead Gen (account-based outreach)
Wrong tool	Outbound prospecting — you cannot cold-sell a facelift	Mass advertising — referrers want a relationship
Pace	Compounds steadily as content + reviews build	Each relationship sends cases for years

The rest of this blueprint follows that structure: Section 4 answers the lead-gen question directly, Section 6 details the referral engine (Engine B), and Section 7 details the consumer engine (Engine A) on top of the My SEO already in place.

03 Where the Demand Lives

Before tactics, it helps to see exactly where the next patient comes from. Consumer demand is large, searchable, and already partly served by the practice's My SEO. Referral demand is smaller in count but far more valuable per relationship — and almost entirely uncaptured today.

Consumer Demand — What Patients Search

Patient Search	Value	How Robinson Wins It
"best facelift surgeon Orange County"	Very high	SEO (live) + GEO + reviews + before/after proof
"deep plane facelift near me"	Very high	A procedure-specific page that ranks and gets AI-cited
"rhinoplasty Orange County" / revision rhinoplasty	High	Visual gallery + surgeon credentials + consult capture
"eyelid surgery / blepharoplasty cost"	High	Cost + candidacy explainer the assistant can answer
"Botox / filler near me Aliso Viejo"	Recurring	Local SEO + offers + the recurring-revenue base
"Mohs reconstruction surgeon"	High	A page that serves BOTH patients and referring derms

Referral Demand — The Practices That Send Cases

A facial plastic surgeon earns a meaningful share of surgical volume from other providers. This universe is finite, local, and listed in public records — which is what makes it a perfect fit for My AI Lead Gen (Section 6):

Referral Source	Why They Refer	Priority
Dermatologists / Mohs surgeons	Mohs skin-cancer excisions on the face need reconstruction — Dr. Robinson does this	★★★★★

Referral Source	Why They Refer	Priority
Non-surgical med spas	Take Botox/filler revenue but refer surgical cases (facelift, eyes, nose) up	★★★★
Dentists / oral & maxillofacial	Chin and jaw work, facial trauma, cosmetic facial referrals	★★★
Optometry / ophthalmology	Droopy-lid (ptosis) and cosmetic/functional eyelid cases	★★★
PCP · OB-GYN · estheticians / salons	General cosmetic referrals from trusted local relationships	★★

04 Can My AI Lead Gen Help? The Honest Answer

This is the question that prompted the blueprint, so it deserves a direct answer rather than a sales pitch: yes — but for one engine, not both. Getting this right is what separates a program that works from money spent in the wrong place.

For Consumer Patients — No (and here's why)

My AI Lead Gen is an outbound engine: it harvests named targets from public business data, enriches them, and runs personalized outreach. That model does not fit individual patients. You cannot ethically or practically build a list of "people who want a facelift," privacy and HIPAA aside — and nobody chooses an elective \$15K–\$40K surgery because they received a cold message. Consumer growth is won by being found and trusted at the moment someone is already searching, then nurturing them to a booked consult. That is Engine A (Section 7), built on the My SEO already running — not outbound lead gen.

For Professional Referrals — Yes, and It's a Strong Fit

Referral sources are exactly what My AI Lead Gen was built to find. Every dermatology, Mohs, med-spa, dental, and optometry practice in Orange County is a named business in public records (the NPI registry, Google Business, and more). My AI Lead Gen harvests that universe, enriches and scores it, and delivers outreach-ready, personalized sequences — replacing the cold-list tax of tools like Apollo or ZoomInfo. Pointed at referrers, it builds a pipeline of relationships, each of which can send cases for years.

The Mohs Reconstruction Wedge

Dr. Robinson performs Mohs reconstruction — repairing the face after a dermatologist removes skin cancer. That is a direct, recurring, high-intent referral line.

My AI Lead Gen can surface every Mohs surgeon and dermatology practice in Orange County and put them at the top of the outreach list — a channel almost no competitor systematically pursues.

This is account-based and relationship-first: AI builds the list and drafts the outreach; Dr. Robinson and the coordinator build the trust. The tool supports the relationship; it does not replace it.

05 Understanding AI — A Field Guide for Robinson Facial Plastic Surgery Leadership

This section exists to make the rest of this report easy to evaluate. No jargon, no hype — just what AI is, where the practice sits today, how to adopt it without risk, and what comparable organizations are already doing. The goal is that Dr. Robinson and the team can judge every recommendation that follows on its merits.

What AI Actually Is — and Isn't

As MIT Sloan puts it, a leader needs to know what AI can and cannot do — not how to build it. In practice, the only distinction that matters for planning is this:

- Automation (workflows): the AI follows a path you define — predictable and low-risk. For example, "text every post-op patient a review request three days after surgery." This is where almost all near-term value lives.
- Agents: the AI decides the steps itself — more flexible, and it needs human oversight. For example, "watch the referral pipeline and flag which derm practices to follow up with." This comes later, where it earns its place.

The operating principle (Anthropic's guidance on building AI systems) is to use the simplest thing that works. Robinson Facial starts with simple automations that pay off in the first 90 days — review velocity, consult capture, referral harvesting — and adds autonomous agents only where the value is proven, which is exactly how the roadmap in this report is sequenced.

Where Robinson Facial Sits Today — The AI Maturity Ladder

Most established, well-run practices — including Robinson Facial — sit at the first or second rung of the widely-used five-stage AI maturity model (consistent with Gartner and Google Cloud frameworks). The leaders in any field are only one or two rungs higher, and the gap closes in months, not years.

Stage	What It Looks Like	Robinson Today
1. Foundational	Little or no AI; manual, people-dependent marketing and intake	
2. Emerging	A live My SEO program is in place, but AI is not yet woven into reputation, capture, nurture, or referral growth	◀ You are here
3. Operational	AI runs specific workflows day-to-day — review velocity, consult nurture, referral outreach — with measured results	
4. Scaled	AI is embedded across both growth engines with governance and dashboards	
5. Transformational	AI is the default way the practice markets, captures, and grows	

Robinson Facial is already at the Emerging stage: the My SEO program is live. This report is the plan to reach Operational — AI working across both the consumer engine and the referral engine — within twelve months.

Adopting AI Responsibly — Three Risks Every Leader Manages

The U.S. government's NIST AI Risk Management Framework gives leaders a simple mental model — Govern, Map, Measure, Manage. For a medical practice like Robinson Facial, three risks matter most, and each has a concrete control:

Risk	What It Means	How Technijian Controls It
Hallucination	AI can state a confident, wrong answer	Human-in-the-loop review on anything patient-facing or medical — AI drafts candidacy and procedure copy, Dr. Robinson or the coordinator approves
Data leakage	Sensitive data pasted into public tools can escape	Private, governed AI deployments — patient information and any PHI never touch a public model; HIPAA-aware handling by design

Risk	What It Means	How Technijian Controls It
Compliance & accountability	Untracked AI tools create audit gaps	Every AI tool inventoried with owner, vendor, and data source — led by a CISSP-certified team

What Comparable Organizations Are Already Doing

- Elective-procedure practices: aesthetic and dental practices are running systematic post-visit review requests to lift local ranking and trust — turning years of happy-but-silent patients into a visible reputation.
- Local service providers: businesses are using AI search optimization (GEO) to become the cited answer when prospects ask AI assistants "best [procedure] near me" — capturing demand competitors never see.
- Referral-driven B2B: relationship-led businesses are using account-based AI outreach to systematically court a finite, named referral universe instead of leaving it to chance.

These are representative directions of travel across comparable industries, not guarantees; Robinson Facial's own numbers would be confirmed in discovery. Technijian's specific capabilities and prior builds appear in Section 10 (Capability Proof).

A Day in the Life — A Robinson Facial Patient Coordinator

Before vs. After AI

TODAY: A coordinator answers consult inquiries by phone and a single web form, repeats the same candidacy, cost, and financing questions all day, manually remembers to follow up with patients still deliberating, and rarely has time to ask happy post-op patients for a review — so the reputation gap stays open and warm consults go cold.

WITH AI: A 24/7 consult assistant answers candidacy/cost/financing on drface.com and books consults; nurture sequences keep deliberating patients warm automatically; a review-request goes to every happy patient on schedule; and the referral list and outreach are drafted for the coordinator to approve. The coordinator spends time on patients, not on repetitive chasing — and nothing falls through the cracks.

Why a Partner — vs. Hiring or Doing It Yourself

Path	Reality
DIY tools	Inexpensive, but the practice assembles, secures, and governs everything — and owns the three risks above alone
Hire in-house	A capable AI marketing lead typically costs \$180K+/year and is scarce, and one person cannot cover SEO/GEO, build, security, and governance
Partner (Technijian)	Strategy, build, security, and governance in one team at a fraction of a hire — with proven builds and CISSP-led security, already trusted via the live My SEO program

Sources cited in this section: MIT Sloan Management (AI literacy); Anthropic (AI system design); a widely-used five-stage AI maturity model (consistent with Gartner and Google Cloud frameworks); U.S. NIST AI Risk Management Framework. Full references in the Appendix.

06 The Referral Engine (Engine B)

This is the new growth channel My AI Lead Gen opens. The diagram below shows the referral universe it harvests and the priority order it works — with dermatologists and Mohs surgeons first, because facial reconstruction is a direct line into Dr. Robinson’s operating room.

The Referral Engine — What My AI Lead Gen Builds

A finite, nameable universe of local practices that send surgical cases. ★ = referral priority.

Figure 5.0 — The Referral Engine: the practices My AI Lead Gen harvests, scores, and courts

How My AI Lead Gen Runs It

Stage	What Happens	Output
Harvest	Pull every OC dermatology/Mohs, med-spa, dental, and optometry practice from public data (NPI registry, Google Business)	A complete named-target list
Enrich	Add practice size, services, decision-maker, and contact details	Outreach-ready records

Stage	What Happens	Output
Score	Rank by referral fit — Mohs/derms first, then med spas, then the rest	A prioritized queue
Deliver	Personalized outreach in Dr. Robinson’s voice; coordinator follows up; track responses	Booked referral meetings

Why This Channel Compounds

A consumer ad stops working the day you stop paying. A referral relationship, once earned, sends cases for years — at near-zero ongoing cost.

The universe is finite: there are only so many dermatology and Mohs practices in Orange County. Working the full list systematically is achievable, not endless.

It is a wedge no competitor is pressing. The big Newport Beach names compete loudly for consumers; few are quietly building the referral base Dr. Robinson’s Mohs work makes natural.

07 The Consumer Engine (Engine A) — Building on My SEO

The practice already runs My SEO, so this engine is about extending what's working — not starting over. Four additions turn existing search visibility into more booked surgeries, and the first is the highest-ROI move available to the practice today.

Addition	What It Does	Why It Matters
Reputation engine	Systematically request reviews from happy patients (post-visit SMS/email)	Closes the 32-vs-hundreds gap; lifts local ranking AND trust at compare-time
GEO (on top of My SEO)	Make procedure pages the source AI assistants cite	Patients now ask ChatGPT/Perplexity "best facelift surgeon OC" before they call
Chat.AI consult assistant	24/7 assistant answers candidacy / cost / financing and books the consult	Aesthetics sites bounce; an assistant converts visits into consults
Consult-to-surgery nurture	Tasteful email/SMS over the weeks a patient deliberates	Lifts the single biggest revenue metric — consult-to-surgery conversion

The Reputation Gap Is the Quick Win

21 years and thousands of patients have produced only ~32 Google reviews. The reviews are not missing because patients were unhappy — they were never asked.

A systematic post-visit review request can multiply that count within 90 days, directly improving how Robinson ranks against Newport Beach competitors and how a comparing patient perceives the practice.

This single move costs little, builds on the existing My SEO, and pays back faster than anything else in the plan.

08 Competitive Landscape

Orange County facial plastic surgery is one of the most competitive aesthetic markets in the country, concentrated in Newport Beach. Robinson's clinical credentials are fully competitive; the gap is digital reputation and visibility — which is precisely what this program closes.

Competitor	Market / Focus	Digital Posture
Dr. Kevin Sadati	Newport Beach — facelift, "natural" look	700+ 5-star reviews; "Best Facial Cosmetic Surgeon OC" — the dominant brand
Dr. Ali Sajjadian	Newport Beach — rhinoplasty authority	~5,000 nose procedures, 30 yrs; strong rhinoplasty SEO
Dr. Rami Batniji	Newport Beach / Beverly Hills — deep-plane facelift	Orange Coast Top Doctor 2026; polished brand
Dr. Ali Sepehr	Newport Beach / Tustin	Fellowship-trained (U Toronto); active content
Dr. Timothy Miller	Orange County — eyelid + face/neck	Established; less aggressive digital
Dr. Jonathan Zelken	Newport Beach	NewBeauty Top Doctor; social-forward

Where Robinson Wins — The White Space

Reputation velocity: 32 reviews vs. competitors' hundreds is the single biggest, most fixable gap. The quality is there; the reviews were never collected.

South-OC ownership: the big names cluster in Newport Beach. Robinson can own Aliso Viejo, Laguna, Mission Viejo, San Clemente, and Dana Point local search instead of fighting Newport head-on.

The Mohs-reconstruction referral niche: a clinical credential most cosmetic-only competitors don't emphasize — and a B2B referral wedge nobody is systematically courting.

GEO first-mover: almost no OC surgeon is optimized to be the answer AI assistants cite. Robinson can claim it.

AI Search Reality Check

Here is the gap made concrete. When a prospective patient asks an AI assistant the question below today, this is the shape of the answer they get — illustrative of how AI search resolves this query right now:

Prompt: "Who is the best facial plastic surgeon in Orange County for a facelift?"

TODAY — the AI assistant answers with whichever surgeons have the strongest content and review signals it can read: it names the dominant Newport Beach brands (hundreds of reviews, heavy content) and does NOT mention Dr. Robinson — even though his 21 years, dual board certification, and fellowship training are fully competitive. Robinson is invisible at the exact moment the patient is forming a shortlist.

AFTER GEO + reviews — the same query returns Robinson as a cited option ("Dr. Ernest B. Robinson is a dual board-certified, fellowship-trained facial plastic surgeon in Aliso Viejo with 21+ years of experience..."), with the procedure pages and a deeper review base as the supporting evidence the assistant points to.

(Illustrative of current AI-search behavior for this query class; the live result would be captured as the GEO baseline at the discovery call.)

09 The Patient & Referral Customer

Robinson serves a handful of distinct segments across the two engines. Each is reached differently — which is the whole point of separating consumer capture from referral lead gen.

1 — The Surgical Self-Investor (Engine A)

Profile	Affluent, 45–65, considering a facelift, neck lift, or eyelid surgery. The highest-value patient.
Mindset	Researches for weeks or months; reads reviews; compares 3–4 surgeons; "do it for myself."
Decision Driver	Trust and natural results. Reviews, before/after proof, and surgeon credentials win the consult.
How AI Helps	GEO + reviews put Robinson in the consideration set; nurture and the consult assistant convert the deliberation into a booking.
Technijian Hook	My SEO (live) + GEO + My AI reputation/nurture + Chat.AI consult capture.

2 — The Rhinoplasty Patient (Engine A)

Profile	Often 20s–30s, highly visual and social-media-driven; primary or revision rhinoplasty.
Mindset	Studies galleries and surgeon specialization closely; wants proof of nose-specific expertise.
Decision Driver	Portfolio depth and credibility for the specific procedure.
How AI Helps	Procedure-specific SEO/GEO pages + visual proof + an assistant that answers cost/candidacy.
Technijian Hook	My SEO + GEO + Chat.AI; before/after content engine.

3 — The Injectables Regular (Engine A)

Profile	Returns 2–4×/year for Botox and filler; the recurring-revenue base and a referral source.
----------------	---

Mindset	Convenience and trust; often the entry point to a future surgical case.
Decision Driver	Local, easy booking, consistent results, fair offers.
How AI Helps	Local SEO + offers + recall reminders keep them coming back and upgrade them over time.
Technijian Hook	My SEO (local) + My AI recall/nurture.

4 — The Referring Dermatologist / Mohs Surgeon (Engine B)

Profile	A local derm or Mohs surgeon who removes facial skin cancers and needs a reconstruction partner.
Mindset	Wants a reliable, skilled surgeon who makes them and their patient look good — and communicates back.
Decision Driver	Surgical skill, responsiveness, and a relationship. The #1 B2B target.
How AI Helps	My AI Lead Gen surfaces and scores them; personalized outreach + Dr. Robinson's Mohs credential opens the door.
Technijian Hook	My AI Lead Gen (account-based) + My Dev referral-status touchpoints.

5 — The Med-Spa Referrer (Engine B)

Profile	A non-surgical med spa that performs injectables but refers surgical cases out.
Mindset	Wants a trusted surgeon to send facelift/eyelid/nose cases to without losing the patient relationship.
Decision Driver	Trust and a clean hand-off; reciprocal respect.
How AI Helps	My AI Lead Gen identifies non-surgical spas in the area and runs partnership outreach.
Technijian Hook	My AI Lead Gen (account-based outreach).

6 — The Out-of-Town Guest (Engine A)

Profile	A patient traveling to Orange County for a specific procedure; the site already has an out-of-town page.
Mindset	Needs logistics confidence (travel, recovery, aftercare) on top of surgeon trust.

Decision Driver	Reputation + a concierge-grade experience that removes travel friction.
How AI Helps	GEO captures destination searches; the consult assistant answers logistics and books the virtual consult.
Technijian Hook	My SEO + GEO + Chat.AI (virtual consult capture).

Figure 8.0 maps each segment by revenue value and volume — blue for consumer patients (Engine A) and orange/gold for referral sources (Engine B, the My AI Lead Gen targets).

Figure 8.0 — Patient & Referral Segments: Revenue Value vs. Volume

10 Technijian Capability Proof

Robinson already knows Technijian delivers — the My SEO program is live. The platforms below are the rest of the toolkit, each delivered and operating for real clients, and each mapped to a specific engine in this plan.

Proven Build 1 — Multi-Agent SEO + GEO Platform (extends your live My SEO)

What Technijian Built: Technijian operates a multi-agent platform (Claude, GPT-4o, and Gemini with MCP, plus SEMrush, GA4, and Perplexity) that ranks content in Google and positions clients as the answer the AI assistants cite.

How This Applies to Robinson Facial: It layers GEO onto the My SEO already running — so "best facelift surgeon Orange County" and the procedure searches win in both Google and ChatGPT / Perplexity / Google AI Overviews.

Proven Build 2 — My AI Lead Gen: Account-Based Outbound (the referral engine)

What Technijian Built: My AI Lead Gen harvests high-fit targets from public data, enriches and scores them, and delivers outreach-ready personalized sequences — replacing the Apollo / ZoomInfo subscription tax.

How This Applies to Robinson Facial: It builds the referral engine: every OC dermatology/Mohs, med-spa, dental, and optometry practice, scored with Mohs derms first, with personalized outreach in Dr. Robinson's voice. This is the answer to the lead-gen question.

Proven Build 3 — AI Review & Reputation Engine

What Technijian Built: Technijian built an AI review and reputation system that requests, monitors, and responds to reviews across Google and the directories local search ranks on.

How This Applies to Robinson Facial: It closes the 32-vs-hundreds review gap with systematic post-visit requests — the single highest-ROI move available, lifting both local ranking and patient trust.

Proven Build 4 — Chat.AI Conversational Capture

What Technijian Built: Chat.AI is Technijian’s enterprise AI platform; as a website assistant it answers visitor questions in natural language around the clock and hands qualified inquiries to a person.

How This Applies to Robinson Facial: On drface.com it answers candidacy, cost, and financing questions for nervous prospective patients and books the consult — turning visits into consults instead of bounces.

Proven Build 5 — AI-Native Custom App Delivery (My Dev)

What Technijian Built: Technijian’s AI-native SDLC delivers custom web apps 3–5x faster than traditional development — funnels, integrations, and automations built around a real workflow.

How This Applies to Robinson Facial: It builds the consult-to-surgery nurture flows, the booking/lead routing, and the referral-status touchpoints that keep referring practices informed and loyal.

How We Keep AI Affordable — Seven Models, Routed by Task

A fair question about running AI across SEO content, review generation, nurture, and referral outreach: won’t the token bill be enormous? Not the way Technijian builds it. We do not wire every task to one expensive model — our platform routes across roughly seven models, spanning three AI vendors and three capability tiers, and sends each sub-task to the cheapest model that can do it well.

Tier	What It Does	Share of Work
Frontier (premium)	The hardest judgment only — final brand-voice pass on patient-facing copy, candidacy/medical-claim wording, deepest reasoning	~5–10%
Workhorse (balanced)	The bulk of drafting and reasoning — procedure content, referral-outreach personalization, review responses, nurture sequences, scoring	~30–40%
Lightweight (low-cost)	High-volume mechanical work — classification, extraction, enriching and tagging thousands of OC referral-practice records	~50–60%

The result: Robinson Facial pays premium-model prices only for the small slice of work that warrants them — typically a 60–80% lower run cost than routing everything to one top-tier model, with no quality loss where it counts. For example, a single procedure explainer is drafted by a low-cost model, tightened and fact-checked by a mid model, and given a final brand-and-accuracy pass by a frontier model — instead of one premium model doing all three at roughly triple the cost. This is the kind of AI engineering depth a partner brings that wiring everything to one chatbot does not.

11 Business Impact & Service Investment

The model below is built from public and industry benchmarks because Robinson’s internal numbers were not available for this draft. Every figure is estimated and conservative; the discovery questions in Section 14 replace them with real baselines. Because a single facial surgery case is high-value, the ROI holds at modest case counts — the two engines simply need to add a handful of cases each.

AI as a Managed Investment — Not a Leap of Faith

The reason most AI spending disappoints is not the technology — it is the lack of measurement. Industry research (McKinsey State of AI, 2025) finds roughly 88% of companies now use AI, but only about 39% see a real profit impact; the difference is discipline, not budget. Technijian runs every engagement with stage-gates: we track adoption, then operational improvement, then financial benefit against total cost — and if a pilot does not clear its cost at the gate, we stop and re-scope. Robinson Facial carries the upside, not blind risk.

The Entry Offer — The 90-Day AI Visibility & Reputation Pilot

Start with one clearly-scoped, fixed-price program — not an open-ended engagement. The pilot stands up the reputation engine and the GEO layer on top of the live My SEO, plus the consult-capture assistant, and proves the lift before the referral engine or the larger build is discussed.

What's Included	Detail	Investment
My AI — Reputation Engine	Systematic post-visit review requests to close the ~32-vs-hundreds gap; monitoring and response	\$1,500/mo
My SEO — GEO Extension	GEO/AI-citation layer + procedure content on top of the My SEO already running	\$750/mo
My Dev — Consult Capture (Chat.AI)	Consult-assistant integration + booking funnel on drface.com (one-time build)	\$20,000 one-time

What's Included	Detail	Investment
Discovery & Baseline	Calibration call: real consult volume, conversion, referral counts, case value	Included
90-DAY PILOT	Fixed scope, published rates, no referral-engine spend until proven	~\$6,750 + build

The Pilot Bar — and Our Commitment

Success metric: within 90 days, Robinson Facial has at least 25 net-new Google reviews from happy patients AND the consult-capture assistant is live and booking consults on drface.com.

Our commitment: the pilot is month-to-month, no lock-in, and there is no obligation to continue if it doesn't hit the metric by day 90. If it has not moved the needle, you are under no obligation to continue — and we will tell you honestly whether it is worth continuing. You carry the upside, not the risk.

Projected KPI Lift (Estimated)

KPI	Estimated Current	With the Program	Direction
Google reviews	~32 (after 21 yrs)	Hundreds within a year	Ranking + trust
GEO citations (ChatGPT, Perplexity, AI Overviews)	None	Cited for key procedures	Durable visibility
Consult → surgery conversion	Unmanaged	Nurtured	More surgeries, same consults
Active referring practices	Ad hoc / few	A worked, growing list	Recurring case flow
Visitor → consult capture	Form only	Chat.AI assistant + funnel	More from same traffic

Year-1 ROI Model (Estimated, Conservative Assumptions)

Model Input	Conservative	Target	Aggressive
Incremental cases — referral engine (Y1)	+12	+24	+40
Incremental cases — consumer engine (Y1)	+8	+16	+28
Avg case value*	\$12,000	\$12,000	\$12,000
Total additional annual revenue	+\$240,000	+\$480,000	+\$816,000
Technijian Program Investment (Y1)	~\$96,200	~\$96,200	~\$96,200
Modeled ROI Ratio	2.5x	5.0x	8.5x

* Blended placeholder across surgical procedures; conservative — facelifts and rhinoplasty run well above \$12,000. Excludes recurring injectables uplift. All figures projected, not guaranteed.

Technijian Service Investment Map

Service	Scope	Monthly	Y1 Total
My SEO — GEO Extension	Add GEO/AI-citation + procedure content on top of the My SEO already running	\$750/mo	\$9,000
My AI — Reputation + Nurture	Review-velocity engine + consult-to-surgery nurture flows	\$1,500/mo	\$18,000
My AI Lead Gen — Referral Engine	Harvest/enrich/score/outreach to OC referral practices (Professional tier)	\$3,499/mo	\$42,000
My Dev — Capture & Funnel Build	Chat.AI consult-assistant integration, booking funnel, lead routing (one-time)	—	\$20,000
My Dev — Managed Services	Hosting, monitoring, and ongoing optimization	\$600/mo	\$7,200
YEAR-1 TOTAL (added program)	Recurring \$6,349/mo + build		~\$96,200

My SEO is already in place and is not re-billed here — this map shows the added program. Chat.AI is integrated within the My Dev build. All amounts confirm against scope at the discovery call.

The Math That Matters

A single facelift or rhinoplasty case can be worth \$15,000–\$40,000. At a conservative \$12,000 blended, just eight added cases a year cover the full program — and the model targets far more.

The reputation engine and the referral engine both produce results that compound: reviews and relationships keep paying long after the work to build them.

The program is phased — reputation + capture first (fast payback), then the referral engine — which lowers the entry point and proves return before the full spend.

The Cost of Waiting

Two things compound against the practice every quarter it waits. First, AI-search visibility rewards whoever optimizes first: each quarter Robinson Facial is not the cited answer for "best facelift surgeon Orange County," the assistants learn to answer with a Newport Beach competitor — and that default, once set in the retrieval data, is harder and more expensive to dislodge than to claim now. Second, the reputation gap stays open: every month of happy-but-unasked patients is local ranking and compare-time trust ceded to surgeons with hundreds of reviews. The referral universe is finite, too — the dermatologists and Mohs surgeons a competitor courts first are no longer available to court. The cost of waiting is not zero; it is a competitor becoming the default answer and the default referral partner.

12 Implementation Roadmap

The roadmap runs on a 90 / 180 / 365-day cadence: strengthen the consumer engine first (where the fastest wins are), stand up the referral engine next, then scale both. Meaningful results — more reviews, more captured consults — are visible inside the first 90 days.

Figure 11.0 — Robinson Facial Plastic Surgery: 90 / 180 / 365-Day Roadmap

Phase 1 — Foundation (Days 1–90)

Strengthen the consumer engine on top of the live My SEO — and capture the demand it already creates.

Milestone	Deliverables
1.1 — Reputation + GEO	Launch the review-velocity engine (post-visit requests). Layer GEO and procedure content onto the existing My SEO.
1.2 — Capture & Nurture Live	Deploy the Chat.AI consult assistant on drface.com. Stand up consult-to-surgery nurture flows and lead tracking.

Phase 2 — Referral Engine (Days 91–180)

Stand up Engine B — the answer to the lead-gen question.

Milestone	Deliverables
2.1 — Harvest the Universe	My AI Lead Gen pulls every OC dermatology/Mohs, med-spa, dental, and optometry practice; enriches and scores it (Mohs derms first).
2.2 — Account-Based Outreach	Personalized outreach in Dr. Robinson’s voice; coordinator follow-up; first referral meetings booked.

Phase 3 — Scale Both Engines (Days 181–365)

Compound what is working across both engines.

Milestone	Deliverables
3.1 — Both Engines Compounding	Consult-to-surgery conversion rising; a steady, growing referral case flow from the worked list.
3.2 — Optimize & Report	Double down on the procedures and referrers that convert. ROI dashboard delivered against the Section 14 baselines.

13 Quick Wins — Start This Week

Five actions Robinson Facial can take immediately — before any new engagement. Each creates value this week and leads into the larger program.

1 — Text Your Last 50 Happy Patients for a Review

The 32-review gap is the biggest, cheapest fix in the practice. Have the coordinator text the last 50 satisfied surgical patients a one-tap Google review link. Even 20 new reviews shifts local ranking and compare-time trust within weeks.

2 — Claim and Complete the Google Business Profile

Verify the Aliso Viejo Google Business Profile; add full procedure descriptions, hours, photos, and before/after imagery. This is free local visibility that patients and referrers both check.

3 — Build the Mohs / Dermatology Target List

Open Google Maps and list every dermatology and Mohs practice within 20 miles. This is the seed of the referral engine — and Dr. Robinson's reconstruction credential is the reason to reach out.

4 — Add a Consult CTA + Assistant to Every Procedure Page

Make "Request a Consultation" unmissable on every procedure page, and add a simple chat/booking prompt. Capture the visitor while their interest is high instead of relying on a single contact form.

5 — Publish One Before/After-Rich Procedure FAQ

Pick the top procedure (facelift or rhinoplasty) and publish a page answering the real questions — cost, recovery, candidacy — with before/after proof. This is the seed of the GEO content AI assistants cite.

14 Questions to Calibrate This Plan

This blueprint was built from public information. The numbers in Sections 11 and 12 are deliberately conservative — a short discovery call replaces them with Robinson’s real baselines and sharpens the whole program. These questions move the model the most:

Topic	What We’d Confirm	Why It Matters
Consult funnel	Monthly consult volume and consult → surgery conversion rate	The #1 consumer-engine lever and ROI input
Referrals today	Current referral volume and which practices send cases	Sizes Engine B and seeds the target list
Case value	Average surgical case value and surgical vs. non-surgical mix	Sets the revenue lines in the ROI model
My SEO scope	What the existing My SEO program covers today	So we extend it, not duplicate it
Lead handling	Who answers calls / inquiries now, and how fast	Designs the capture + nurture layer
Reviews	Any existing review-request process or platform	Calibrates the reputation engine
Paid ads	Any Google / Meta / Instagram spend running now	Determines where capture plugs in
Systems	Practice-management / CRM system in use	Defines the integration surface for nurture + routing
Locations	Confirm Aliso Viejo + Laguna Hills — and whether Temecula is active	Scopes local SEO + geographic targeting
Brand	Robinson Facial Plastic Surgery vs. the DrFace brand — which leads?	Aligns SEO/GEO and outreach naming

How to Use This Section

None of these questions block starting — the Quick Wins and Phase 1 foundation proceed regardless.

A single 30-minute call answers most of them and lets Technijian return a calibrated ROI model and a fixed-scope Statement of Work.

The goal is a plan built on Robinson's real numbers — not on our conservative estimates.

15 Questions We Usually Get

The honest answers to the questions Robinson Facial leadership is most likely asking right now.

Question	Our Honest Answer
We already run My SEO with Technijian. Why add more?	Keep it — it is working, and we do not re-bill it here. This plan adds the layers it does not cover: the GEO/AI-citation layer on top of it, the reputation engine that closes the review gap, consult capture and nurture, and the My AI Lead Gen referral engine. Everything is additive to the program already running.
Isn't AI mostly hype right now?	A lot of it is. That is why this blueprint starts with simple, proven automations that pay back fast — review velocity, consult capture, referral harvesting — not autonomous "agents" running your practice. We use the simplest tool that works, measure it, and only expand what earns its place.
Is our data — patient information — safe?	Yes. Sensitive data and any PHI never touch a public AI model; we deploy private, governed systems with human review on anything patient-facing or medical, led by a CISSP-certified team. Review and nurture run on consenting, post-visit contact only.
We're a small team. Do we have the bandwidth to manage this?	The point is the opposite — to give the coordinator back hours, not add work. Technijian runs the build and the cadence; your involvement is a short review of what we draft and approving outreach in Dr. Robinson's voice. There is no new hire to manage.
What if it doesn't work?	The entry program is a fixed-price 90-day pilot with a defined success metric (Section 11), month-to-month with no lock-in. If it has not moved the needle by day 90, you are under no obligation to continue — and we will tell you honestly whether it is worth it.

Question	Our Honest Answer
What does it really cost?	The 90-day pilot is roughly \$6,750 plus the one-time capture build, at published rates — no hidden fees. The full added program is profiled in Section 11, but only the referral engine and the rest are added after the pilot proves the lift.

16 What Happens Next

Robinson Facial Plastic Surgery has the hardest thing to build already: 21 years of dual-board-certified, fellowship-trained results. What it is missing is a digital reputation that matches that surgical one, and a referral engine worthy of Dr. Robinson's Mohs-reconstruction credential. Both are buildable now, on top of the My SEO already in place and on systems Technijian has already delivered.

And the question that started this is answered: yes, My AI Lead Gen can grow the business — as the referral engine, courting the dermatologists, Mohs surgeons, and med spas that send surgical cases, while the consumer engine captures and converts the patients already searching. Two engines, each with the right tool.

Recommended Next Steps

Step 1: A 30-minute discovery call to answer the Section 14 questions and confirm scope against the existing My SEO program.

Step 2: Technijian returns a calibrated ROI model and a fixed-scope Statement of Work within 5 business days.

Step 3: Phase 1 kickoff — review engine, GEO layer, and the Chat.AI consult assistant — live inside 14 days of signature.

17 About Technijian

Technijian is an AI-native managed services and technology firm headquartered in Irvine, California, serving small and mid-sized businesses since 2000. We build and operate the AI systems that help local businesses compete at scale — and Robinson Facial already runs our My SEO program.

Service	What It Delivers for Robinson Facial
My SEO	The live program — extended with GEO so the practice ranks in Google AND gets cited by the AI assistants for the procedures patients search
My AI Lead Gen	The referral engine — harvest, enrich, score, and court the dermatology/Mohs, med-spa, and dental practices that send surgical cases
My AI	The reputation engine (close the review gap) and consult-to-surgery nurture
My Dev	Chat.AI consult-assistant integration, the booking funnel, lead routing, and referral-status touchpoints

A Appendix — Sources

Market and practice intelligence gathered via public web research conducted May 22, 2026. Review counts, credentials, and competitor claims are from publicly available sources and to be confirmed with the practice before external use.

1. Robinson Facial Plastic Surgery — official website: drface.com (Home, About, Surgical & Non-Surgical Procedures, Aesthetic NP, Photos & Stories, Contact, Blog)
2. drface.com — procedures, team, locations (Aliso Viejo + Pacific Hills Surgery Center, Laguna Hills), badges (RealSelf Top Doctor, AAFPRS, Allergan)
3. Web research — Orange County facial plastic surgery competitive set (Sadati, Sajjadian, Batniji, Sepehr, Miller, Zelken)
4. My AI Lead Gen — mechanics + pricing (Harvest → Enrich → Score → Deliver; Starter \$1,499 / Professional \$3,499 / Enterprise \$6,999 per month)
5. Mohs reconstruction referral pattern — dermatology / Mohs surgery to facial reconstructive surgeon (clinical referral line)
6. Technijian service pricing — My SEO, My AI, My AI Lead Gen, My Dev, Chat.AI rate cards; Technijian SEO + GEO strategy methodology
7. MIT Sloan Management Review — AI literacy for executives (Section 5: framing AI literacy as "what AI can do," not how to build it)
8. Anthropic — Building Effective Agents (Section 5: the automation/workflow vs. agent distinction)
9. AI maturity models — a widely-used five-stage model consistent with the Gartner AI Maturity Model and Google Cloud AI Adoption Framework (Section 5: the maturity ladder concept)
10. U.S. NIST AI Risk Management Framework (Govern / Map / Measure / Manage) — Section 5: responsible-AI controls for the three risks
11. McKinsey — The State of AI, 2025 (Section 11: ~88% of companies use AI, ~39% see profit impact — AI as a stage-gated managed investment)
