

Danielian × Technijian — win more pursuits, run the studio with less drag

A one-page concept: AI on two fronts, sitting *under* the relationships and the craft Danielian has built over 57 years. It augments the licensed architects and planners — it does not design or stamp. This is a starting point to react to, not a commitment.

Front 1 — Growth

Win a larger share of the named developer universe Danielian already competes for: pursuit/proposal assembly from days to hours, account intelligence on land buys and entitlement filings, and authority content on the questions developers ask. **Owner: Deborah Muro (BD).**

Front 2 — Integration

Make 57 years and 6,353 projects searchable; give entitlement and code research a head start; return hours to billable design. For an established firm this may be the bigger near-term win. **Owner: Victor Alvarez-Duran (CTM).**

Why now

California is legislating housing demand up into Danielian's exact product lines — SB 79 transit upzoning (effective July 1, 2026), SB 1211 (up to 8 ADUs per multifamily lot), and ADU streamlining — while the architecture field splits into AI-ready and AI-behind firms (53% of A&E firms now use AI; only ~20% feel "highly prepared"). The firm that turns pursuits around fastest captures disproportionate share.

Proof — same market, already built

For a luxury custom-home builder in OC coastal communities, Technijian built a multi-agent AI system watching the signals that precede a permit (just-sold, ARC filings, story poles, DRB agendas) across 10 permit jurisdictions and 60+ HOA committees — surfacing **24 enriched, scored Tier-1 leads in a single 75-minute run**. Same public-records terrain as Danielian's developer pursuits. The design craft stays with Danielian; Technijian builds the AI and IT layer around it.

The program — framed as EOS Rocks

Entry (the easy yes)	Scope	Est. Y1
My AI Workshop + Readiness	Set the program as EOS Rocks; readiness baseline	~\$5,000
Fractional AI Advisor	Program lead, governance, pursuit-automation pilot	~\$24,000
My SEO — Authority / AEO	Authority content on the housing-policy questions developers ask	~\$12,000
ENTRY PROGRAM (Y1)	Prove the lift, no large build	~\$41,000

Modeled ROI vs. the entry: **pays for itself** on recovered studio hours alone (zero added wins); **~2.6×** expected (one added pursuit win + hours); **~5.5×** upside. The expansion — the knowledge graph, account intelligence, and entitlement assistant — is scoped at discovery and compounds across every pursuit and office. Estimates, calibrated to Danielian's real numbers.

The ask: a 30-minute walkthrough, plus a free Nexus Assess and one live-pursuit before/after — no contract, no obligation. The fastest way to see the highest-value play on real work.
