

DANIELIAN ASSOCIATES

AI Growth & Integration Strategy

Executive Summary

196857 years designing
communities**1M+**

Units of housing delivered

775+

Design awards

~2.6×Modeled Y1 ROI vs. the
entry

Two fronts: win more developer pursuits — and run the studio with less non-design drag. AI sits under the relationships and the craft Danielian has built over 57 years; it does not design, and it does not replace the pursuit. This summary covers the opportunity, the engine, the program, and the entry. The full strategy is ready on request.

Prepared for Danielian Associates | Technijian | 2026-06-01

01 The Opportunity

Danielian wins work through deep developer relationships, a reputation for craft, and pursuits that land the next project. None of that changes. What this strategy adds is a layer underneath it, on two fronts at once:

	Front 1 — Growth (win more pursuits)	Front 2 — Integration (run the studio)
The win	Higher pursuit win rate; faster, sharper proposals; better account timing	Hours returned to billable design; 57 years of knowledge made searchable
Owner	Deborah Muro, Director of Business Development	Victor Alvarez-Duran, Chief Technology Manager
AI role	Account intelligence, proposal automation, authority content	Searchable archive, entitlement research, production automation

Why Now — The 2026 Window

Demand is being legislated up: SB 79 (transit upzoning, effective July 2026), SB 1211 (up to 8 ADUs per multifamily lot), and ADU streamlining push more work into Danielian's exact product lines — multifamily, BTR, ADU, middle housing.

The field is split: 53% of A&E firms now use AI and 94% of users are expanding it, yet only ~20% feel "highly prepared." The firm that turns pursuits around fastest captures disproportionate share.

Danielian already runs on EOS, with a Chief Technology Manager and a Director of Business Development — the two seats this program reports into. It is a firm built to absorb this.

02 The Engine

Three motions, all aimed at the named developers Danielian already competes for — never a broad funnel. AI sits under the relationship layer and removes the non-design drag; the trust and the craft still win the work.

The Danielian AI Growth + Integration Engine

Account-based: AI sits *under* the relationship layer — it augments the licensed architects and planners; it does not design.

Inbound authority · Outbound pursuit intelligence · Internal knowledge & production — feeding one studio

Get cited

Authority content on the housing-policy questions developers ask (SB 79, ADU, BTR) — so Danielian is the cited expert, not a name in a broad ad.

Win the pursuit

SOQ / RFQ / proposal assembly from days to hours, precedent-matched per pursuit, with account intelligence on land buys and entitlement filings.

Free the studio

57 years and 6,353 projects, finally searchable; entitlement and code research with a head start — hours returned to design and client time.

03 The Program

The program is built land-and-expand and framed as EOS Rocks: a small entry that proves the lift, then a clearly-labeled expansion once it does. Here is the entry — the easy yes. The

bigger build (the institutional knowledge graph, account intelligence, the entitlement assistant) comes later, once the entry proves out, and is scoped at discovery.

Entry Service	Scope	Est. Y1
My AI — Workshop + Readiness	Set the AI program as EOS Rocks; readiness baseline (one-time)	~\$5,000
My AI — Fractional AI Advisor	Program lead, governance, and the pursuit-automation pilot	~\$24,000
My SEO — Authority / AEO foundation	Authority content on the housing-policy questions developers ask	~\$12,000
ENTRY PROGRAM (Y1)	Prove the pursuit + efficiency lift, no large build	~\$41,000

Year-1 ROI vs. entry	Downside-Protected	Likely	Upside
Total estimated Y1 value	+\$22,500	+\$105,000	+\$225,000
Modeled ROI	pays for itself	~2.6×	~5.5×

Even with zero additional pursuit wins, the studio hours the automation returns cover the entry. The expected case counts a single added win plus those hours. Projected, not guaranteed; calibrated to Danielian's real numbers at discovery.

04 The Roadmap & Next Step

Implementation Roadmap

Land the entry first; prove the pursuit lift; then scale firmwide across all three offices.

Foundation (0–90 days) → Pursuit Engine (90–180) → Firmwide Scale (180–365)

Two fronts, one local partner — five minutes apart in Irvine.

Start with a free Nexus Assess and one live-pursuit before/after — no contract, no obligation.
