

CARDLOGIX

AI-Driven Business Development Blueprint

Executive Summary

2Tracks: your IT + a CJIS
partnership**Oct 2024**CJIS phishing-resistant MFA
went mandatory**~\$31K**

Entry program, Year 1

5 min

Apart in the Irvine Spectrum

CardLogix makes the credentials that secure identity — PIV, FIDO2, FRAC, and BIOSID. This summary distils a two-track plan: a small co-managed IT engagement for CardLogix's own team now, and a CJIS-MFA channel partnership where Technijian wraps managed services around CardLogix's cards for law-enforcement agencies. The full plan is ready on request.

Prepared for CardLogix Corporation | Technijian | 2026-05-30

The Opportunity

Two distinct openings sit in front of CardLogix, and the plan treats them as parallel tracks — one fast and close to home, one strategic.

	Track A — Your Own IT	Track B — CJIS / MFA Partnership
What	Co-managed IT for a lean internal team	CardLogix supplies the credentials; Technijian wraps managed IT, SOC, and CJIS compliance for agencies
Confidence	High — this is what co-managed IT is for	Real but unproven — the CJIS mandate is the catalyst
Time	Weeks once scoped	A few quarters — needs one joint pilot

Why Now — The CJIS Shift

CJIS Security Policy 5.9.5 made phishing-resistant MFA mandatory for law-enforcement access to criminal-justice information as of October 1, 2024; version 6.0 tightened it further.

CardLogix's PIV and FIDO2 cards satisfy that mandate. What agencies still need is a partner to deploy and operate them — the managed-services wrap CardLogix does not bring today.

Honest note: Technijian runs eight compliance frameworks but not yet CJIS. We treat CJIS as a near-term build adjacent to our existing CMMC practice — triggered by exactly this partnership, never claimed as completed work.

How AI Powers Both Tracks

This is account-based, not broad lead generation. AI sits underneath the relationship layer — it surfaces the right agencies, arms the conversation, and automates the compliance evidence. The human trust between CardLogix, Technijian, and an agency still closes the deal.

CardLogix AI Growth Engine

Account-based (ABM): AI sits *under* the named-account strategy — it does not replace the relationship layer.

Inbound authority · Outbound account intelligence · Internal evidence — feeding one joint pipeline

Three Motions

Get cited: authority content answering the exact CJIS and smart-card questions agency IT teams ask.

Reach the right accounts: AI account intelligence and trigger monitoring on named agencies and the integrators that serve them.

Remove the drag: AI-assisted CJIS audit-evidence packs and card-lifecycle automation.

The Entry Program

The plan is built land-and-expand: a small, easy-to-approve entry that solves Track A now, with the larger partnership engine built later, once the entry proves the working relationship. Only the entry is shown here; the full Service Investment Map is reserved for the discovery call. Every figure is estimated and confirmed at discovery.

Service	Scope	Est. Y1
My IT — Co-Managed	Coverage, monitoring, patching, senior support for a lean team	~\$14,400
My SEO — Authority Starter	Foundation content on CJIS + smart-card questions	~\$12,000
My AI — Readiness Workshop	One-time: map the joint go-to-market + CJIS build path	~\$5,000
ENTRY PROGRAM (Y1)	The land — no large build	~\$31,400

The entry is small on purpose. Its return is partly recovered internal IT time and a stronger posture — but mostly the trust that makes the partnership (Track B) credible. The bigger build comes later, once the entry proves the lift.

The Roadmap

Implementation Roadmap

Land Track A first; prove the joint motion on one pilot; then scale the channel play.

Foundation (0–90 days) → Joint Pilot (90–180) → Scale (180–365)

Two tracks, one local partner — five minutes away in the Spectrum.

Use the Book a Meeting button in my signature to set up a time to discuss this and all the AI strategies Technijian is putting into place for itself and its clients.
