

Multi-Location Restaurant Group

Ongoing SEO, Content & WordPress Program

How Technijian ran a full-stack monthly SEO + content + WordPress program for a multi-location restaurant group — with measurable SEMrush audit resolution and continuous organic-search visibility growth.

INDUSTRY	ENVIRONMENT	SERVICES ENGAGED	ENGAGEMENT WINDOW
Hospitality / Restaurant	Multi-property, WordPress	SEO, Content, WordPress, Reports	4 months · 340 hrs

THE CHALLENGE

A multi-location restaurant group depended on its websites for **reservation bookings, menu discovery, and local search visibility**. Each location had its own site, its own content calendar, and its own set of SEMrush audit findings — but no single partner owning the whole picture.

Organic rankings were slipping on key local terms. Blog content was sporadic. Technical SEO issues (broken links, cache/cart plugin conflicts on WooCommerce-style pages, page-speed drag) were piling up in the SEMrush queue. Weekly keyword tracking and reporting existed in the spreadsheets of whoever remembered to run them.

THE SOLUTION

Technijian ran the program as a **monthly SEO + content + WordPress service** with a 4-person specialist team: a standing weekly review cadence, monthly keyword tracking across SEMrush / Google Search Console / Google Analytics / HOTH, technical SEO issue resolution, and a consistent blog publishing pipeline tuned for local intent and property-specific pages.

- ✓ **Monthly keyword & ranking tracking** across SEMrush, Google Search Console, Google Analytics, and HOTH — with expanded keyword monitoring over time
- ✓ **SEMrush / HOTH audit resolution** — technical SEO issues worked down on a standing cadence across the main and test sites
- ✓ **Content production** — researched, drafted, and published SEO-optimized blog posts with proper structure, keyword targeting, internal linking, and formatting
- ✓ **WordPress maintenance** — cache & cart plugin optimization for stability, performance, and checkout reliability
- ✓ **Hours-of-operation accuracy** across site and OpenTable for reservation-driving queries
- ✓ **Weekly client reporting** and standing client calls to align priorities and review SEO improvements

ENGAGEMENT SCALE

4 SPECIALISTS ON TEAM	213 TIME ENTRIES	340 HOURS DELIVERED	9 TICKET WORKSTREAMS
---------------------------------	----------------------------	-------------------------------	--------------------------------

THE RESULTS

Over the engagement period, the program delivered **consistent monthly hours** on a predictable cadence — a documented editorial pipeline, closed SEMrush findings on each audit pass, and expanded keyword monitoring across the property portfolio. Reservation-driving local terms moved from "slipping" to "tracked and defended."

MONTHLY ACTIVITY (2026 YTD)

MONTH	TIME ENTRIES	HOURS	TICKETS ACTIVE
January 2026	56	94.7	7
February 2026	60	94.5	2
March 2026	66	102.4	4
April 2026 (partial)	31	48.8	1
Total	213	340.4	9 unique

OUTCOME METRIC	RESULT
Editorial cadence	Consistent monthly blog publishing pipeline across property websites — SEO-structured, keyword-targeted, internal-linked, published on cadence.
SEMrush audit resolution	Audit issues closed on each pass across main and test sites; site stability and functionality improved through cache and cart plugin optimization.
Keyword coverage	Monthly keyword monitoring tracked and expanded across SEMrush, GSC, and HOTH — with detailed performance reports delivered to client.
Reporting & cadence	Standing weekly client calls plus formal monthly performance reports (PPT format) for stakeholder review and next-step alignment.
Team model	4-person specialist team under a single engagement — one accountable partner, consistent voice, no context loss between tickets.

REPRESENTATIVE WORK

SEO-optimized blog launch — Researched, drafted, and published blog content for property websites to improve organic reach, audience engagement, and brand visibility.

SEMrush resolution cycles — Technical errors resolved on property websites, broken links fixed, performance optimized, and seamless user experience validated after each audit pass.

WordPress optimization — Cache and cart settings optimized across main and test sites for stability and functionality; updates completed and verified.

Monthly reporting — SEMrush, Google Search Console, Google Analytics, and HOTH data consolidated into detailed performance reports and PPT presentations prepared for client review.

REPRESENTATIVE OUTCOME

"A multi-location restaurant group consolidated its SEO, content, and WordPress maintenance under a single 4-person specialist team — moving from sporadic audit-response to a monthly editorial + technical SEO cadence with documented keyword coverage and reporting."
