

Orange County Non-Profit Cloud Mailbox Migration & Partner-Agency B2B Collaboration

How Technijian migrated an OC non-profit's mailboxes off a reseller-hosted O365 tenant and stood up cross-tenant B2B collaboration with a county public-health partner — secure mail flow, shared access, governed endpoints.

INDUSTRY	USERS / MAILBOXES	SERVICES ENGAGED	ENGAGEMENT WINDOW
Non-Profit / Health Services	10 mailboxes + user fleet	M365, B2B, VPN, Endpoint	12 months · 99+ hrs

THE CHALLENGE

A health-focused Orange County non-profit ran mail on a **reseller-hosted Office 365 tenant** (GoDaddy-Hosted O365). The tenant model limited admin controls, complicated license management, and blocked the **B2B cross-tenant collaboration** the non-profit needed to work securely with a county public-health partner agency.

The non-profit also relied on remote clinical and case-management staff needing VPN access, endpoint compliance, and SharePoint-based file collaboration — all of which were held back by the reseller-tenant constraints and a patchwork of point tools.

- ✓ **Reseller-tenant mail** (GoDaddy O365) limiting admin and governance
- ✓ **B2B cross-tenant blocker** — can't collaborate natively with partner agency
- ✓ **TLS mail flow** with Mimecast + partner domain needed configuration
- ✓ **Remote / hybrid staff** needing VPN, endpoint compliance, and SharePoint
- ✓ **Endpoint drift** — Cisco AnyConnect, Umbrella, patches inconsistent
- ✓ **No single accountable IT partner** across mail, endpoints, and collaboration

THE SOLUTION

Technijian delivered a **two-track engagement**: a formal mailbox migration off the reseller tenant to a direct Microsoft 365 tenant using MigrationWiz, followed by ongoing managed operations covering B2B partner setup, secure mail flow, endpoint compliance, and SharePoint collaboration support.

- ✓ **Mailbox migration** off GoDaddy-Hosted O365 to native Microsoft 365 tenant using MigrationWiz — pre-stage + full delta pass, verified integrity
- ✓ **B2B cross-tenant setup** with county public-health partner for secure collaboration on shared participant populations
- ✓ **Secure mail flow** — TLS connection between Microsoft 365, Mimecast, and partner domain configured and validated
- ✓ **VPN & endpoint** — Cisco Secure Client (AnyConnect), Cisco Umbrella, and ManageEngine patching kept current
- ✓ **SharePoint & file access** — site membership management, access troubleshooting, and backup planning for recovery
- ✓ **Device compliance** — Windows updates, feature packs, and configurations rolled through ManageEngine with verification

PLATFORMS UNDER MANAGEMENT

Microsoft 365 (direct tenant)	Exchange Online	MigrationWiz
Azure AD / Entra B2B	Mimecast	
Cisco Secure Client (AnyConnect)	Cisco Umbrella	ManageEngine
CrowdStrike Falcon	SharePoint Online	Teams

WORK CATEGORIES (12 MO)

General support · 80 tkts	M365 admin · 17 tkts
Endpoint mgmt · 7 tkts	

ENGAGEMENT SCALE

10 MAILBOXES MIGRATED	104 TICKETS (12MO)	99+ HOURS DELIVERED	B2B PARTNER TENANT
--------------------------	-----------------------	------------------------	-----------------------

THE RESULTS

Mail now runs on a **direct Microsoft 365 tenant** — full admin control, proper license management, and a clean governance baseline. The non-profit **collaborates securely with its county public-health partner** on a native cross-tenant B2B setup, with TLS-secured mail flow via Mimecast. Endpoints stay compliant, VPN works, and SharePoint access problems are resolved inside the same ticket queue.

OUTCOME METRIC	RESULT
Tenant posture	Moved off reseller-hosted Office 365 onto a direct Microsoft 365 tenant — full admin, license, and governance control restored.
Migration integrity	10 mailboxes moved via MigrationWiz with pre-stage + full delta pass; post-migration verification confirmed no data loss or corruption.
B2B collaboration	Cross-tenant B2B connection configured with county public-health partner for secure, governed collaboration on shared participant populations.
Secure mail flow	TLS connection between Microsoft 365, Mimecast, and partner domain configured and validated — secure mail transport across the partnership.
Endpoint compliance	Cisco Secure Client (AnyConnect), Cisco Umbrella, and Windows patch compliance maintained through ManageEngine with per-device verification.
SharePoint support	User access issues resolved inside the same ticket queue; site membership and backup discussions moved from ad-hoc to documented.

REPRESENTATIVE WORK (12 MONTHS)

B2B configuration — Working session with partner agency IT to configure and validate a cross-tenant B2B connection, enabling secure collaboration and proper email flow between tenants.

TLS connector setup — Configured TLS connection between Microsoft 365, Mimecast, and partner domain for secure mail transfer; validated both directions end-to-end.

AnyConnect deployment — Cisco Secure Client (AnyConnect) VPN and Diagnostics tools installed and verified on remote-worker machines; post-install tests confirmed VPN connectivity.

Umbrella sync fixes — Identified machines not syncing properly with the Cisco Umbrella portal; restarted services, re-scanned from portal, confirmed sync restored.

M365 user lifecycle — New user provisioning in partner platform, encrypted credential delivery, and ongoing compliance remediation via ManageEngine patch cycles.

SharePoint access — Investigated SharePoint site structure, resolved member-access issues, and scoped full-site backup conversations to give leadership a recovery option.

REPRESENTATIVE OUTCOME

“An OC non-profit moved its 10 mailboxes off a reseller tenant onto direct Microsoft 365, stood up B2B cross-tenant collaboration with a county public-health partner over TLS-secured mail flow, and pulled endpoint, VPN, and SharePoint operations into a single managed ticket queue.”
