

TCI × Technijian — point AI at the commercial side: get found, win named accounts, run leaner

A one-page concept: commercial AI on two pillars, sitting *under* the relationships, the yards, and the operational AI TCI already runs. It gets TCI found and arms the sales team — it does not replace the rep or sign the lease. A starting point to react to, not a commitment.

Pillar 1 — The Recurring Core

Capture more full-service leases, maintenance contracts, and used-truck sales: local + answer-engine search across **26+ yards**, account intelligence on fleets at a lease-vs-own inflection, and a quote / spec-to-lease assistant that converts 24/7.

Pillar 2 — The EV / WAIRE Wedge

Own the California zero-emission transition the national giants treat generically. Target the **WAIRE-obligated warehouses** in TCI's own air basin with EV trucks, charging, and a compliance-cost-vs-lease ROI tool that turns the rule into a sale.

Why now

California is legislating the EV pillar into a deadline — SCAQMD's WAIRE rule ramps warehouse obligations through 2031, and CARB's Advanced Clean Fleets and Advanced Clean Trucks mandates push zero-emission adoption — creating a buyer who needs exactly what TCI offers, in TCI's own backyard. Meanwhile a slow freight recovery rewards TCI's diversified, recurring mix (leasing, maintenance, factoring, used trucks), and the giants stay digitally strong but generic. The local operator that out-modernizes regionally captures both.

Proof — the same motion, already built

For a luxury home builder, Technijian built a multi-agent AI system harvesting seven public-records signal layers across **10 permit jurisdictions and 60+ committees** — surfacing **24 enriched, scored Tier-1 leads in a single 75-minute run** and replacing 15–20 hours a week of manual work. That is the exact motion TCI needs to find WAIRE-obligated warehouses and named fleets. Add a multi-location SEO program (340 hours over four months for a multi-property client) for the get-found pillar. TCI keeps the relationships and the yards; Technijian builds the AI layer around them.

The program — land and expand, priced honestly

Entry (published — the easy yes)	Scope	Y1
My SEO — Tier 5 + AEO / PR / Syndication	Multi-location local + answer-engine search foundation; 12-month, unlimited service hours	~\$24,600
ENTRY PROGRAM (Y1)	Prove the search + capture lift, no large build to start	\$2,050/mo

The expansion — the custom build (quote-to-lease assistant, WAIRE/EV ROI tool, AI-assisted portal, used-truck merchandising), account intelligence, and a Fractional AI Advisor — is priced from the published 2026 rate card (AI engineering \$185–\$275/hr; advisor \$1,500–\$3,500/mo) and scoped into a fixed-price Statement of Work at discovery. We don't quote numbers we can't ground: the calibrated ROI model comes back within five business days of a discovery call, built on TCI's real per-deal economics.

The ask: a 30-minute walkthrough, plus five zero-commitment Quick Wins and one live before/after — no contract, no obligation. The fastest way to see the highest-value play on real TCI work.
