

# TCI TRANSPORTATION

## AI Growth & Integration Blueprint

### Executive Summary

**1978**Family-owned, 2  
generations**3,800+**

Trucks, tractors &amp; trailers

**26+**

Facilities across 10 states

**1,500+**

Team members

TCI already runs operational AI — preventative maintenance, collision mitigation, telematics. This blueprint points AI at the one place it has not yet aimed: the commercial side, where the next dollar of growth is found, won, and kept. Two pillars: own the recurring leasing core through search and account intelligence, and own the California EV / WAIRE niche the national giants treat generically. This summary covers the opportunity, the engine, the program, and the entry. The full blueprint is ready on request.

Prepared for TCI Transportation | Technijian | 2026-06-01

## 01 The Opportunity

TCI wins work through 47 years of relationships, a full-service offer under one roof, and a service culture the national giants can't match in any single market. None of that changes. What this blueprint adds is a commercial-AI layer underneath it, on two pillars at once:

|                | Pillar 1 — The Recurring Core                                                  | Pillar 2 — The EV / WAIRE Wedge                                                 |
|----------------|--------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| <b>The win</b> | More full-service leases, maintenance contracts, and used-truck sales captured | Own the California zero-emission transition the giants treat generically        |
| <b>How</b>     | Local + answer-engine search across 26+ yards; account intelligence on fleets  | Target WAIRE-obligated warehouses; EV trucks + charging + a compliance-ROI tool |
| <b>AI role</b> | Get found, surface named accounts, automate the quote and the RFP              | Find obligated warehouses by truck-trip data; make the compliance math a sale   |

### Why Now — The 2026 Window

California is legislating the EV pillar into a deadline: SCAQMD's WAIRE rule ramps warehouse obligations through 2031, and CARB's Advanced Clean Fleets and Advanced Clean Trucks mandates push zero-emission adoption — a buyer who needs exactly what TCI offers, in TCI's own air basin.

The freight market rewards diversification: with carriers failing and the recovery slow, TCI's recurring mix — leasing, maintenance, factoring, used trucks — is a resilience story it does not yet tell where buyers look.

The national giants are digitally strong but generic. The nimble, local, family-owned operator that out-modernizes regionally captures the demand and the EV niche before they localize.

## 02 The Engine

Three motions, all aimed at the fleets, shippers, and warehouses TCI already knows — never a broad funnel. AI gets TCI found, arms the sales team, and speeds the quoting and bidding; the relationship, the yards, and the lease still close the deal.

### TCI AI Growth Engine - Get Found, Win Named Accounts, Run Leaner

Searchable demand on the left; account-based outbound to named fleets, shippers & WAIRE warehouses in the center; capture & service on the right.

| GET FOUND<br>searchable demand: SEO + AEO                                                                                    | ACCOUNT INTELLIGENCE<br>named accounts + outbound                                                                    | INTERNAL AUTOMATION<br>quote, serve, retain                                                                            |
|------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|

| <b>WAIRE / EV Authority + GBP</b><br>Own the WAIRE & ZE-truck<br>questions; reviews across every yard.<br>My SEO             | <b>Account Dossiers + Churn</b><br>Pre-visit briefs for reps; flag<br>at-risk lease / maintenance accounts.<br>My AI | <b>Portal + AI Chatbot</b><br>Leasing, maintenance, factoring &<br>roadside self-service.<br>My Dev                    |

\* My SEO - My AI - My Dev. AI gets TCI found and arms the field team - it does not replace the relationship, the yards, or the lease that closes the deal. TCI already runs the operational AI;

Get Found · Account Intelligence & Outbound · Internal Automation — extending the operational AI TCI already runs

### Get found

Local and answer-engine search across 26+ yards: a page per facility and service, and authority content that owns the WAIRE, EV-truck, leasing, and used-truck questions buyers ask in Google and AI answers.

### Win named accounts

The same public-records account-intelligence motion already in production for a Technijian client — 24 contact-ready leads in a single 75-minute run — pointed at WAIRE-obligated warehouses and named fleets, with RFP and lease-proposal automation behind it.

### Run leaner

A quote / spec-to-lease assistant, a WAIRE/EV ROI tool that turns the regulation into a sales conversation, used-truck merchandising, and an AI-assisted portal across leasing, maintenance, factoring, and roadside.

## 03 The Program

The program is built land-and-expand: a small, published entry that proves the lift, then an expansion scoped at discovery once it does. We are deliberate about money — only the published price is stated as firm; the build is priced from the rate card and scoped into a fixed-price Statement of Work, never an invented number.

| Entry Program (published)                | Scope                                                                          | Y1                |
|------------------------------------------|--------------------------------------------------------------------------------|-------------------|
| My SEO — Tier 5 + AEO / PR / Syndication | Multi-location local + answer-engine search foundation; 12-mo, unlimited hours | ~\$24,600         |
| <b>ENTRY PROGRAM (Y1)</b>                | <b>Prove the search + capture lift, no large build to start</b>                | <b>\$2,050/mo</b> |

| Expansion (scoped in discovery)                                               | Basis — 2026 rate card                           | Investment       |
|-------------------------------------------------------------------------------|--------------------------------------------------|------------------|
| Custom AI & app build (quote-to-lease, WAIRE/EV ROI tool, portal, used-truck) | AI eng \$185–\$275/hr; full-stack \$145–\$210/hr | Fixed-scope SOW  |
| Account intelligence & outbound + Fractional AI Advisor                       | My AI engagement; advisor \$1,500–\$3,500/mo     | Set at discovery |

## The Return — Value at Stake

Rather than print an ROI multiple we cannot yet stand behind, we name the levers the program moves: new full-service lease and dedicated-contract wins, WAIRE-driven EV deals (a zero-emission Class 6/7 truck earns WAIRE points worth roughly \$68,000 in avoided fees), used-truck unit-sales lift, and retained leasing volume.

Within five business days of a 30-minute discovery call, Technijian returns a calibrated ROI model and a fixed-scope Statement of Work built on TCI's real per-deal economics. Prove the foundation first, then size the engine.

## 04 The Roadmap & Next Step

### 90 / 180 / 365 Day Growth Roadmap

TCI - Technijian growth program. Get found, win named accounts, run leaner.

\* Account, lease & WAIRE-deal targets calibrate after a 30-min discovery call (see the Questions section). Estimates shown are conservative.

Foundation (0-90 days) → Demand & Intelligence (90-180) → Scale & Automate (180-365)

## A local, family-built partner for the commercial side of TCI.

Start with five Quick Wins and one live before/after — no contract, no obligation.

Use the Book a Meeting button in my signature to set up a time to discuss this and the AI strategies Technijian is putting into place for itself and its clients.
