WATCH

DATASHEET · ORX CLAIMS PLATFORM — LIVE

Jian for Applications puts a dedicated AI agent on the revenue-critical application your business runs on — the same autonomous monitor · triage · alert engine behind Jian, taught *your app's* business logic. It watches the data flow, traces any record end-to-end, and hands your team the exact worklist. **Read-only and alert-only by design:** Jian finds it — your people make the call.

Built on the MCP pattern

SP → API → MCP

Credentials from vault

FLAGSHIP DEPLOYMENT ORX — ORTHOKINETIX / ORTHOXPRESS CLAIMS PLATFORM

Three live agents on one revenue cycle

OXPLive Feed WATCHDOG

Watches the OrthoXpressDB → OXPLiveNG claims feed — the platform's single most critical dependency. Detects feed-freeze, source-vs-destination lag, and the open claims-backfill gap.

WHAT IT NOW CATCHES

A silent **95-day feed outage** once froze ~9,295 claims. The watchdog now flags a freeze in **15 minutes**.

Waystar CLEARINGHOUSE

Commercial / Medicare 837 submission, responses & REST API. Detects the batching leak (lines billed but never transmitted), buckets rejections for correction, and traces any claim end-to-end.

WHAT IT SURFACED

~1,615 lines / **~\$180K** billed but never sent — delivered as a ready-to-resubmit worklist.

DaisyBill WC 837 MCP

California workers'-comp e-billing via the live DaisyBill MCP server. Watches bill-sync & EDI-837 recency, MCP + core-API health, and bill / payment counts.

NOW HEALTH-CHECKED

85 syncs / 82 EDI runs / 0 failures historically — now continuously watched for any >24h gap or 503.

WHY AN APP AGENT PAYS FOR ITSELF

One missed billing event dwarfs a year of watching.

Figures are real findings on the ORX claims platform.

\$180K

billed-but-unsent lines surfaced

9,295

claims caught in the feed-freeze gap

~6,000

rejected claims auto-bucketed to worklists

PRICING THREE LINES — PRICED ON REVENUE PROTECTED, NOT HEADCOUNT

Indicative bands · confirmed on scoping

ONE-TIME

Build

\$8K–\$25K / app agent

Teach Jian your app: discovery, **SP → API → MCP** integration, the detections, and the operating runbook.

★ THE RECURRING LINE

PER AGENT / MONTH

Run

\$250–\$500 / agent / mo

Continuous 24x7 watch, alerts, worklists & monthly.
Bundle a platform: ORX's 3 agents ≈ **\$750–\$1,500/mo.**

OPTIONAL

Managed Ops

Retainer / T&M

We **operate, fix & modernize** the app — the work a dev shop did — on your managed-services rate card.

Watch → Worklist → (optional) Operate.

Land on the watch, expand to operations as trust builds.

Reusable for any line-of-business app.

HOW IT WORKS — THE HONESTY GUARDRAILS

- ✓ **Read-only by default.** Jian watches & traces; it never auto-resubmits a claim — duplicate-claim / timely-filing risk is real money, so billing stays human.
- ✓ **Branded, throttled alerts.** jian@ email + Client Portal ticket + Teams — each with the exact worklist, not just “something's wrong.”

- ✓ **Credentials from your vault.** Never in code or logs; least-privilege API / SQL access only.
- ✓ **MCP-pattern foundation.** SP → API → MCP — the same reference architecture as the live DaisyBill server.

Have a revenue-critical app no one is watching? We'll put an agent on it.

From a single feed watchdog to a whole platform — scoped in days, watching in weeks, on the same engine trusted across 57+ managed environments.
