

Technijian

for Abound Food Care

A working conversation about IT support that resolves, communicates, and plans ahead.

First Meeting | Ravi Jain ↔ Esmeralda Bustos | June 11, 2026 · Teams

15-computer environment · **Newly on Microsoft 365** · **An office move on the horizon**

technology as a solution · 18 Technology Dr. Ste 141, Irvine CA 92618 · technijian.com · 949.379.8499

AGENDA

What we'd like to cover today

A working conversation, not a pitch. You told us exactly where support falls short — that's where we'll spend the time.

OUR GOAL TODAY

Understand how technology supports Abound's mission and team — and leave you with a clear, free way to evaluate your options without disrupting what you have today.

You know your organization.

We bring straight answers about what good IT support should look like.

1

What we heard from you

Fifteen computers, a provider that's responsive but issues that recur — said back to make sure we got it right.

2

Responsive isn't the same as resolved

Why quick support can still leave the same problems coming back — and what closure actually looks like.

3

How we run support

A named team, tickets that close only when you confirm, recommendations in writing — communication as a system.

4

Getting full value from Microsoft 365

You just made the move from Google. Securing, right-licensing, and finishing it — including nonprofit pricing.

5

The office move, done as a project

Circuits ordered early, a planned cutover weekend, and a Monday morning where everything just works.

6

A free first step

A no-cost IT and security assessment you can run while under contract — the findings are yours either way.

WHAT WE HEARD

Your situation, said back to you

From your conversation with Jannea. Today we fill in the details — please correct anything we have wrong.

RECURRING ISSUES · RAISED, STILL
UNRESOLVED

NEW

TO MICROSOFT 365 · MOVED FROM
GOOGLE

1

OFFICE MOVE ON THE HORIZON

WHAT THAT MEANS

Responsive support, unresolved problems. Your provider answers quickly — and you said so. But recommendations that don't fully fix things, miscommunication between technicians and staff, and tickets closed before the work is done mean the same issues keep coming back.

You already did the hard part: you raised it. These issues continued after being addressed with the provider — which is exactly when an organization has earned the right to look at its options.

Two big transitions ahead. A new Microsoft 365 environment to secure and adopt, and a possible office move to plan. The next year needs a partner who plans ahead — not one who reacts quickly.

THE CORE IDEA

Responsive isn't the same as resolved

Fast answers measure speed. Resolution measures whether the problem ever comes back. The gap between the two is process — and process can be fixed.

The pattern you described

(in your own words)

- Quick responses — but recommendations that don't fully resolve the problem
- The same issues recurring after they've been “fixed”
- Tickets closed or left incomplete without anyone confirming
- Technicians and staff talking past each other
- Issues raised with the provider — and the pattern continuing anyway

What good looks like

(support built to close the loop)

- Every problem traced to its root cause and fixed once
- Recommendations in writing — problem, fix, owner, and date
- Tickets close only when the person who raised them confirms
- One named team that already knows your environment
- A standing review where leadership holds the provider accountable

1

It's a process problem, not a people problem

Communication breakdowns and unconfirmed closures aren't bad luck — they're what happens when no system enforces ownership and follow-through. Good providers engineer the loop closed.

2

Recurring issues are a root-cause signal

When a recommendation doesn't resolve the problem, the symptom got treated and the cause stayed. A root-cause review fixes it once — and documents why.

3

Evaluating costs you nothing

You're under contract, and that's fine. A free, structured assessment gives you a prioritized picture of your environment — useful whichever provider you choose.

HOW WE RUN SUPPORT

Built so nothing falls through the cracks

Each of these exists because of a story like yours. Together they're the system that keeps communication from breaking down.

01

A named pod, not a queue

The same dedicated Technijian team every time — they know your people, your setup, and your history, so your staff never starts a ticket by re-explaining everything.

02

Tickets that close properly

Every ticket has one owner and a plain-English status — and it closes only when the person who raised it confirms the problem is actually fixed.

03

Root-cause discipline

An issue that comes back triggers a root-cause review, not a third quick fix. We fix it once, document what caused it, and show you the evidence.

04

Recommendations in writing

Every recommendation states the problem, the fix, the investment, an owner, and a date — then gets tracked to done. No more advice that evaporates.

05

A quarterly review with leadership

A standing sit-down: what broke, what we fixed, what's coming — including office-move planning. You hold us accountable with data, not anecdotes.

06

Plain-language reporting

A monthly report a non-technical leader can actually read: what happened, what it means, what we're doing about it. Proof the system is working.

You shouldn't have to chase your IT provider. The system should chase the work.

YOU JUST MOVED TO MICROSOFT

A migration is done when it's secured, right-licensed, and adopted

Most organizations land on Microsoft 365 functional but not finished. Six things worth checking now — the free assessment covers all of them.

01

Security baseline

Multi-factor authentication for everyone, sensible sign-in policies, and safe sharing defaults — the settings a migration rarely turns on by itself.

02

Nonprofit licensing check

Microsoft offers significant nonprofit pricing and grants. We verify you're on the right plans at the right price — many migrated orgs quietly overpay.

03

Independent backup

Microsoft's retention is not a backup. A deleted mailbox, a compromised account, or an honest mistake past the window is gone — unless it's independently backed up.

04

Email & domain protection

Anti-phishing filtering plus DMARC/DKIM on your domain — so no one can impersonate Abound to your donors, partners, or vendors.

05

Team adoption

Teams, SharePoint, and OneDrive set up the way your team actually works — and short, human training so the Google habits transfer instead of frustrate.

06

Google leftovers, retired cleanly

Drive files, shared docs, calendars, and old accounts still half-alive on Google get migrated or retired on purpose — no orphaned data, no surprise renewals.

Every one of these is checked in the free assessment — you'll know exactly where your new environment stands.

THE OFFICE MOVE

A move is a project — and the calendar is the hard part

Done right, a move schedules backward from moving day. Done late, it's weeks of workarounds. Six things that make the difference.

01

Circuits first

Business internet at the new site has the longest lead time — often 30 to 60+ days. The circuit order is the first domino; everything else schedules behind it.

02

Walk the space early

Network, Wi-Fi coverage, and cabling planned from the floor plan — sized to how your team actually sits and works, not patched after move-in.

03

Build before you move

Firewall, switches, and Wi-Fi installed and tested at the new site while the old office still runs — so moving day is a cutover, not a construction project.

04

Phones move with you

Your numbers, auto-attendant, and call flow transfer without a gap — donors and partners never hit a dead line.

05

The move-weekend cutover

Equipment moves over a weekend on a written runbook with a fallback plan. Monday morning, your team sits down and works.

06

Fix debt in transit

A move is the cheapest moment to retire aging switches, messy cabling, and dead-spot Wi-Fi — improvements ride along instead of becoming separate projects.

Tell us the target date — we'll build the timeline backward from it, whoever ends up running your IT.

PROOF, NOT PROMISES

We do this work for organizations like yours today

Three real Technijian engagements — anonymized for confidentiality, references available on request.

ORANGE COUNTY NONPROFIT

Cloud email move · planned, run, supported

Microsoft 365 mailbox migration

Planned and ran a nonprofit's move to Microsoft 365 — pre-staged migration, verification of every mailbox, and post-migration user training and support, about 26 engineering hours in all. The discipline a cloud transition needs to actually stick.

PROFESSIONAL OFFICE · 18 ENDPOINTS

One weekend · whole fleet upgraded

Windows 11 cutover, zero business-hours disruption

Rolled an 18-workstation fleet from Windows 10 to 11 over a single weekend — preconfigured spares on standby and a structured second pass for stragglers. Almost exactly your fleet size, and the same discipline a move weekend takes.

MULTI-SITE MEDICAL GROUP

12 months · zero patient-facing downtime

Full platform operations, month after month

Phones, servers, endpoints, and Microsoft 365 run as one platform — monthly patch discipline with documented evidence, in a setting where downtime is never acceptable. This is what steady state with us looks like.

Founded 2000 · Irvine HQ + India delivery center · 24/7 support · a dedicated pod assigned to every client.

THE TECHNIJIAN STACK

One partner, five doors — you'd start with two

Each service stands on its own. For Abound: managed IT and security as the foundation; the rest as needs grow.

MANAGED HELP DESK & MONITORING

My IT

Help desk + monitoring + patching for every computer, the network, and Microsoft 365 — one number your staff calls, one named pod that answers.

Start here.

24/7 PROTECTION

My Security

Managed threat detection on every device, email security, MFA everywhere, and 24/7 monitoring — protection sized for a 15-computer nonprofit.

Start here.

MICROSOFT 365, FINISHED PROPERLY

My Office

Licensing (including nonprofit pricing), security baseline, Teams and SharePoint adoption, and the last of the Google environment retired cleanly.

BACKUP & RECOVERY

My Continuity

Independent Microsoft 365 backup and tested recovery — a deleted file, a compromised account, or a failed device never costs you a workday.

PLAIN-LANGUAGE REPORTING

My Jian

Technijian-built monitoring that watches across your stack and produces a monthly report your leadership can actually read — proof it's all working.

HOW PRICING WORKS

Transparent building blocks — no surprises

Real list prices from our standard small-organization packages. Your monthly = your headcount × the stack; the exact quote follows the free assessment.

WHAT PROTECTS EACH PERSON · PER MONTH

Endpoint security — threat detection + DNS filtering + patching + remote support	\$26.50
Email security & anti-phishing	\$4.75
Microsoft 365 cloud backup	\$4.00
Security-awareness training (simulated phishing)	\$6.00
Managed help desk & 24/7 monitoring	~\$46

Per person

≈ \$87 / mo

+ Email-domain (DMARC/DKIM) protection — whole organization

\$20 / mo

Microsoft 365 licenses are billed by Microsoft — on nonprofit pricing, which we verify you're getting.

HOW YOUR NUMBER GETS BUILT

≈ \$87

per person / month — the managed stack

Illustration only: a 15-person organization ≈ \$1,330/mo. Swap in your real headcount and that's the shape of your monthly.

- Flat, predictable monthly — billed per person, every line shown.
- Exact quote after the free assessment — sized to what we actually find, nothing you don't need.
- Timed to your current contract window — no overlap you don't choose.

Real Technijian list prices from our standard small-organization packages; the 15-person figure is illustrative only. Your fixed monthly follows the free assessment.

HOW WE'D ENGAGE

Evaluating us is free — and doesn't disturb what you have

Every step is gated. You see the findings and the quote before deciding anything — and you're under contract, which is fine.

Steps 1–3 are free and commitment-free. The findings are yours to keep — useful even if you decide to stay put.

NEXT STEP

One next step. **No commitment.**

RECOMMENDED

Free Nexus Assess — IT & security review

Internal + external vulnerability scan plus a Microsoft 365 review, scheduled in the next two weeks. You get a prioritized, plain-English roadmap — free, no contract, yours to keep and act on with us or anyone.

YOU KEEP THIS EITHER WAY

The IT Provider Accountability Checklist

One page, ten questions any organization should be able to ask its IT provider — about ticket closure, root cause, written recommendations, and move planning. Useful with your current provider, or your next one.
