states**3M+**

Pairs of new shoes since 1992

\$776K+Largest-ever gift · Stater Bros.,
2026**First — this is built for whoever leads technology and growth**

When we reached out, Nekeda Newell-Hall kindly told us she does not manage your IT — so we built this for your leadership team and whoever owns technology decisions. It works on two fronts: protect a record \$776,000 gift and the donor data behind it, and grow the corporate-partner engine with AI. The growth half sits squarely in the External Affairs lane, and is easy to share with the right colleague.

Since 1992, Shoes That Fit has given children across all 50 states brand-new athletic shoes so they can attend school with dignity, ready to learn and play. A sponsoring group is matched to a partner school, the school measures each child for fit, and the sponsor provides exactly what is needed. The organization now reaches roughly 218,000 children a year and has distributed more than three million pairs. This summary shows where Technijian creates measurable value — and states only verified facts, attributing what the organization reports about itself and deferring company-specific numbers to discovery.

Protect. A record gift and a year of scaling raise the stakes on securing the money and donor data — wire-fraud controls, multi-factor authentication, a clean Microsoft 365 migration — starting with one free risk assessment. **Grow.** AI strengthens the partner engine: look-alike corporate prospecting, faster grants, donor reactivation, and the per-partner impact reports

that win the next gift. The rule never changes: AI drafts and researches, security protects, and a person owns every relationship.

What we verified

- **A trusted national brand:** founded 1992; 501(c)(3) (EIN 95-4425565); led by CEO & ED Amy Fass; Charity Navigator 99% (Four-Star); ~218,000 children a year across 50 states.
- **A record, public gift:** over \$776,000 from Stater Bros. Charities in June 2026 — the largest single donation in the organization's history — for new sneakers this fall.
- **A contribution-funded, invest-ahead year:** FY2025 revenue ~\$13.1M against ~\$17.2M expenses (IRS Form 990), with nearly all revenue from contributions — so protecting and deepening private and partner support is the priority.
- **A strong but un-AI-ready digital presence:** an active impact blog and ~2,084 LinkedIn followers (directly verified), but high-intent corporate-giving searches are an open field — the growth wedge.

A note on method

Your IT and security posture is private, so we assert nothing about it — it is a set of questions, not claims. We use the organization's own "\$776,000+" figure (one outlet rounded to \$766,000), and list Nekeda Newell-Hall by her current site title, Deputy CEO, External Affairs. That is the standard of evidence behind every figure here.

The engine

Three columns — be found and tell the story, raise more and win partners and grants, and serve schools and report impact — each delivered by a specific Technijian service, and much of the enabling technology free or discounted to nonprofits.

Shoes That Fit AI Growth Engine

Be found and tell the story (left); raise more and win partners and grants (center); serve schools and report impact (right).

* My SEO · My AI · My Dev. AI drafts and researches; a human verifies every claim and owns every partner and donor relationship. No donor data goes into public AI tools.

Investment & the path forward

Affordable by design, no invented numbers. We lead with a free Nexus Assess and the free and discounted nonprofit technology — including up to \$10,000 a month in free Google search ads — price the rest from real published ranges, and measure return in dollars raised, hours recovered, children reached, and risk avoided rather than a revenue multiple. The path is start-small: secure the foundation and turn on one growth automation, then grow as each step proves out.

The easiest first step is the free Nexus Assess and a short working session on where AI creates measurable value for Shoes That Fit — no obligation. The full blueprint ends with a structured questionnaire, "Questions to Complete the Analysis," that turns this summary into a costed, calibrated plan scoped to your budget and grant cycles.
