

MICROSOFT 365 · MONTHLY · AUTOMATED

My M365 Report

BY TECHNIJIAN

Stop spending 3 hours per client pulling Microsoft 365 data by hand.

Every month, your clients receive a branded Word document covering license waste, security posture, compliance status, and storage utilization — automatically, on the 1st.

THE MSP PROBLEM

Microsoft 365 Generates Thousands of Signals. Most MSPs Never See Them.

Every month, every tenant you manage produces license waste data, security score changes, compliance violations, and stale account flags. Without an automated process, it stays hidden until a breach, an audit, or an angry client calls.

2–4 Hours Per Tenant, Every Month

The average MSP engineer spends 2–4 hours per Microsoft 365 tenant assembling the monthly client report — navigating the Admin Center, exporting CSV files, building slides, and formatting Word documents by hand.

\$8–\$25 Per User in Hidden Waste

Industry benchmarks show SMBs waste \$8–\$25 per licensed user per month in unused licenses, overprovisioned SKUs, and disabled accounts still billing. Without a monthly audit, this waste compounds silently for quarters.

Compliance Gaps Nobody Sees

DLP policy violations, unlabeled sensitive files, missing retention policies, and audit log gaps don't surface in the native Admin Center unless someone is actively looking. Your compliance-minded clients are flying blind.

QBRs With Nothing to Show

The Microsoft Admin Center shows raw data — not a branded, narrative deliverable ready to hand a CEO or board. Without a monthly report, your QBRs are reactive conversations instead of proactive demonstrations of value.

At 30 M365 tenants, manual reporting burns **\$6,750 per month** in engineer time — producing inconsistent, unbranded exports that can't survive a QBR or a compliance review.

EVERY REPORT INCLUDES

Eight Sections. One Branded Word Document. Every Month.

My M365 Report pulls from Microsoft Graph API, assembles your branded report template, auto-proofreads for consistency, and delivers a client-ready Word document on the 1st of every month.

Section 1 — Executive Summary

A one-screen KPI strip your client can read in 30 seconds:

- Total users, licensed users, active users
- Microsoft Secure Score (current + prior month)
- License waste estimate in dollars
- Compliance issues flagged this month
- Month-over-month trend indicators (up/down/stable)
- Plain-English status narrative

Section 2 — License Usage & Optimization

The highest-ROI section — typically pays for the service in month one:

- Every SKU assigned: E1/E3/E5, Business, Copilot, Power BI, etc.
- Assigned vs. active use per license type
- Disabled accounts still consuming licenses
- E5 users not using Defender P2 or Purview (eligible for E3)
- Dollar savings estimate at current Microsoft list price

Section 3 — Security Posture

Comprehensive security health, not just a score:

- Microsoft Secure Score + industry benchmark comparison
- MFA coverage % with auth method breakdown
- Conditional Access policy gaps (users/apps not covered)
- Privileged account audit: Global/Exchange/SharePoint admins
- Defender for O365 threats caught (where licensed)

Section 4 — Compliance Status

Every compliance control in one section:

- DLP violations — count, types, unprotected locations
- Sensitivity label coverage % across SharePoint/OneDrive
- Retention policy gaps (mailboxes or sites not covered)
- Unified audit log status and retention period
- eDiscovery readiness: holds and custodians configured

BUSINESS / E1 / E3 / E5
ALL SUPPORTED

CONTINUED

Storage, Users, What You Did, and What to Do Next.

The second half of every report covers operational health, proves MSP activity, and gives your clients a clear prioritized action list — so every QBR runs itself.

Section 5 — Storage & Capacity

Full visibility across every storage workload:

- Exchange Online: top 10 largest mailboxes, approaching-quota flags
- SharePoint: top 10 largest sites by GB, external sharing enabled sites
- OneDrive: total usage, users approaching quota, 90-day inactivity
- Archive mailboxes: auto-archive status and current size

Section 6 — User Health

Every stale, risky, or wasteful account surfaced:

- Users with no login in 30/60/90 days (still licensed)
- Disabled accounts still assigned licenses
- Guest accounts — total, inactive 90+ days, top external domains
- Password policy audit: expiry, passwordless configuration
- New users and departures this month

Section 7 — What We Did For You

Prove your MSP's value every single month:

- Summary of all M365 admin actions in the audit log this month
- Policy changes, license assignments, onboarding/offboarding
- Optional: technician hours from PSA against M365-related tickets
- The one section that turns a reporting service into a QBR

Section 8 — Recommendations

A prioritized action list your client can approve and act on:

- P1/P2/P3 priority with estimated effort and dollar impact
- License right-sizing table: specific users + specific SKU downgrades
- Security hardening steps not yet implemented
- Compliance gaps with clear remediation path

SETUP TO DELIVERY

Connected in Under 2 Business Days. Reports Every Month — Automatically.

My M365 Report connects via a read-only Azure AD App Registration using Microsoft Graph API.

No agents, no on-prem software, no MX record changes. We never write to your tenant.

1

App Registration

We provide a 15-minute guide → to create a Global Reader service account in your Entra ID — read-only, no admin write access needed.

2

Upload Brand Kit

Send us your logo (PNG, 600px+) and → primary/secondary hex color codes. We template every report to your MSP's brand.

3

Daily Collection

We pull your M365 data via → Graph API every 24 hours — user activity, license assignments, security events, storage metrics.

4

Monthly Delivery

On the 1st of each month, a → branded Word report is generated, QC'd, and delivered to your designated inbox.

MICROSOFT GRAPH API PERMISSIONS REQUIRED — ALL READ-ONLY

Permission	Type	Used For
Reports.Read.All	Application	License and activity reports
User.Read.All	Application	User inventory, last sign-in dates
Directory.Read.All	Application	Groups, roles, guest users
SecurityEvents.Read.All	Application	Defender alerts and Secure Score
Policy.Read.All	Application	Conditional Access, DLP policies
InformationProtectionPolicy.Read.All	Application	Sensitivity labels
Sites.Read.All / AuditLog.Read.All	Application	SharePoint storage & sign-in logs

Auto-Proofread QC — Every Report, Every Month

Before delivery, every report is automatically checked for blank sections, mismatched date ranges, math errors in savings estimates, and correct brand application. If anything fails, the report is flagged for human review — your clients never receive an incomplete or incorrect report.

HOW WE STACK UP

The Only Solution That Delivers a Complete Branded Deliverable

Alternatives show raw dashboards or require manual export. None produce a white-labeled, narrative Word report with license savings quantified, security scored, and compliance gaps mapped — delivered automatically on the 1st.

Capability	My M365 Report from \$15/tenant/mo	Microsoft Admin Center Included (raw data)	Gradient Synthesize \$149–\$399/mo flat	SysKit Point Contact sales	Manual Assembly ~\$300/tenant labor
Branded Word deliverable	✓	✗	✗	✗	✗
License waste + \$ savings estimate	✓	✗	✓	~	~
Security posture + Secure Score	✓	~	✗	✗	~
Compliance (DLP / labels / retention)	✓	~	✗	~	~
Storage utilization (Exchange/SP/OD)	✓	~	✗	✓	~
Stale account + user health flags	✓	~	✗	✓	~
Automated monthly delivery	✓	✗	✓	~	✗
Auto-proofread QC	✓	✗	✗	✗	✗
White-label branding	✓	✗	✗	✗	✗
Per-tenant pricing (scales with MSP)	✓	n/a	✗	✗	n/a
GCC Government support	L & XL bands	✓	✗	✗	✓

✓ Full capability · ~ Partial · ✗ Not available | Microsoft Admin Center shows raw data — it produces no branded deliverable and requires manual assembly. Gradient Synthesize licenses are priced as a flat MSP fee, not per-tenant — cost does not scale with client base. SysKit Point focuses on SharePoint governance and has no security posture or license waste dollar estimates. Manual assembly is the current default for most MSPs — 2–4 hrs/tenant at \$75/hr.

SIMPLE, TRANSPARENT PRICING

Per-Tenant. User-Count Bands. Every Feature at Every Tier.

Pricing is based on licensed users in the tenant. No per-user math at the MSP level — one price per tenant per month, banded by size. All tiers include the branded Word report, license waste analysis, and automated monthly delivery.

Band	Licensed Users	Monthly	Annual — Save 17%	On-Demand	Compliance Pack	HIPAA/SOC 2 Map
XS	1 – 10	\$15	\$150/yr	—	—	—
S	11 – 25	\$29	\$290/yr	✓	—	—
M ★	26 – 50	\$49	\$490/yr	✓	✓	—
L	51 – 100	\$79	\$790/yr	✓	✓	✓
XL	101+	\$129	\$1,290/yr	✓	✓	✓

RETURN ON INVESTMENT — LICENSE WASTE SAVINGS (FIRST-MONTH IMPACT PER TENANT)

Tenant Profile	Conservative Waste Found \$8–\$12/user/mo industry avg.	My M365 Report Cost	Net Month-1 Impact	Annual Savings
20 users (S-band)	$\$8 \times 20 = \160 saved	\$29/mo	+\$131 in month 1	\$1,572/yr saved
50 users (M-band)	$\$10 \times 50 = \500 saved	\$49/mo	+\$451 in month 1	\$5,412/yr saved
100 users (L-band)	$\$12 \times 100 = \$1,200$ saved	\$79/mo	+\$1,121 in month 1	\$13,452/yr saved
200 users (XL-band)	$\$12 \times 200 = \$2,400$ saved	\$129/mo	+\$2,271 in month 1	\$27,252/yr saved

BUNDLE DISCOUNT

Save 10% with My Meraki Report

Add M365 + Meraki reporting for the same client and save 10% off the combined monthly price. Example: M-band M365 (\$49) + Meraki (\$150) = **\$179/mo** bundled.

20+ Tenants? Save More.

20–49 tenants: 15% off list **50+ tenants:** 25% off list
Annual plans save an additional 17%. Contact us for MSP volume agreements.

BUILT BY MSP VETERANS

Your Clients Deserve Better Than a Screenshot of the Admin Center

Technijian has managed Microsoft 365 environments for MSP clients since 2013. My M365 Report was built out of frustration with manual reporting — the same frustration your team faces every month. We built the tool we wished existed.

MSP-Native Architecture

Built from day one to support multi-tenant MSP workflows. Manage all your M365 clients from a single dashboard — add new tenants in under 2 business days, no per-tenant configuration required beyond the App Registration.

Read-Only. Always.

My M365 Report uses a Global Reader service account — we never write to your client's tenant, never modify licenses or policies, and never retain tenant data after the report is generated. Data residency is U.S.-based.

Your Brand, Not Ours

Upload your logo and brand colors once. Every report delivered to your clients carries your MSP's brand — not Technijian's. Your clients see your professionalism. There is no "Powered by" attribution.

Pays for Itself in Month 1

The license waste section typically identifies savings that exceed the service fee before the second report is generated. At \$49/mo for a 50-user tenant, finding even one unnecessary E5 license covers 6 months of service.

U.S.-Based Support

Technijian's support team is based in Irvine, CA. If a report has an issue, you reach a real engineer — not a chatbot. We stand behind every report we deliver and commit to resolution before the next delivery date.

Compliance-Ready Documentation

The compliance and security sections give your compliance-minded clients the evidence they need for HIPAA, SOC 2, and PCI reviews. L and XL bands include explicit HIPAA/SOC 2/PCI compliance mapping in the report.

Get Your First Report Free Today

Connect your first M365 tenant in under 2 business days. Your first branded monthly report is on us — no credit card required.
See exactly what your clients will receive before you commit.
