

CISCO MERAKI · MONTHLY · AUTOMATED

My Meraki Report

BY TECHNIJIAN

Stop spending 4 hours per client on manual Meraki reports.

Every month, your clients receive a branded Word document covering IDS/IPS events, firewall configuration snapshots, VPN status, device inventory, and a full change audit log — automatically.

THE MSP PROBLEM

Manual Meraki Reporting Is Stealing Your Engineers' Time

Every month, your team manually exports logs, cross-references dashboards, formats Word documents, and proofreads reports — for every single Meraki client. There's a better way.

4 Hours Per Client, Every Month

The average MSP engineer spends 3–5 hours per Meraki organization assembling the monthly client report — pulling event logs, documenting config changes, and formatting the deliverable by hand.

Missed Changes, Missed Liability

Without an automated change audit, you have no paper trail. If a config change causes an outage or a security incident, you may not even know when it happened — or who made it.

Revenue-Negative at Scale

At \$75/hr engineer cost and 4 hrs per org, manual reporting costs \$300/org/month — twice the price of My Meraki Report. For 15 clients, you're burning \$4,500/mo in labor to produce reports.

Inconsistent, Unbranded Deliverables

Reports assembled by different engineers on different days look different every month. Cisco's native export is a PDF with no MSP branding — not the client-ready professional deliverable your clients expect.

At 15 Meraki orgs, manual reporting burns **\$4,500 per month** in engineer time — producing inconsistent, unbranded reports that deliver no competitive differentiation.

EVERY REPORT INCLUDES

Six Sections. One Branded Word Document. Every Month.

My Meraki Report pulls from the Meraki API nightly, assembles your branded report template, auto-proofreads for consistency, and delivers a client-ready Word document on the first business day of each month.

IDS/IPS + AMP Event Roll-Up

Intrusion detection and Advanced Malware Protection events are pulled, deduplicated, and categorized by severity. The report summarizes:

- Total events by type and severity
- Top threat signatures detected
- Blocked vs. alerted events
- Month-over-month trend

Firewall, VPN & DHCP Activity

A complete picture of your client's network policy and traffic:

- Layer 3 firewall rules (inbound + outbound)
- Port forwarding rules
- Site-to-site VPN tunnel status + uptime
- Content filtering categories & DHCP lease summary

Full Config Snapshot + WAN Status

A point-in-time freeze of the entire Meraki configuration at report generation:

- All SSIDs with security settings
- VLAN configuration and subnets
- WAN interface config + live uptime status
- Per-device firmware versions

Change Audit Log

Every admin action attributed and documented:

- Who made the change (admin name + timestamp)
- What changed (field, setting, object)
- Before and after values side-by-side
- 30-day versioned history with diff viewer

Per-Device Inventory

Complete inventory of all Meraki-managed devices:

- Device model, serial, and MAC address
- Current firmware vs. latest available
- Online/offline status at report time
- Network assignment and physical location

Flexible Report Delivery

Reports delivered on your schedule:

- Monthly report on the 1st business day
- Weekly summaries for active monitoring
- On-demand reports generated any time
- Email notification with secure download link

CONFIGURATION AUDIT

Know Exactly What Changed — Before Your Client Asks

My Meraki Report captures a versioned configuration snapshot every 24 hours. When your monthly report runs, we diff the current state against last month and surface every change — attributed to the admin who made it.

Versioned Daily Snapshots

The Meraki configuration is captured nightly and stored with a timestamp. You always have a 30-day history of exactly how the network was configured on any given day — no guessing, no manual exports.

Attributed Change Log

Every configuration change is tied to the Meraki admin who made it, with the exact timestamp, the field modified, and the before/after values. Perfect for incident response, compliance documentation, and client communication.

Month-Over-Month Diff

The report includes a human-readable diff section comparing this month's config snapshot to last month's — so your clients can see at a glance that their network is stable, or review exactly what changed and why.

Compliance-Ready Documentation

The change audit log and config snapshots provide auditors with the documentation they need for HIPAA, PCI, and SOC 2 control evidence — demonstrating that configuration changes are tracked, authorized, and reviewed.

SETUP TO DELIVERY

Connected in Minutes. Reports Every Month — Automatically.

My Meraki Report connects directly to the Meraki API using a read-only API key — no agents, no on-prem software, no MX record changes. Setup takes less than 15 minutes per org.

IDS/IPS Threat Detection

Meraki's built-in intrusion detection fires thousands of signature-based checks per session. My Meraki Report pulls every alert, deduplicates, and summarizes by category and severity — with monthly trend data.

Sourced from Meraki Security Center

AMP Malware Events

Advanced Malware Protection flags malicious file downloads in real time. The report captures every AMP event — file hash, disposition, and client device — so your team can follow up on confirmed threats immediately.

File-level threat attribution

VPN + WAN Uptime

Site-to-site VPN tunnel uptime and WAN interface health are captured at report time and trended across the month. Outages, failovers, and latency spikes are documented with timestamps.

Live status at report generation

1

Connect API Key

Provide a read-only Meraki API key. We never write to your network or modify any settings.

2

Upload Brand Kit

Upload your logo and brand colors. Every report is generated in your template — white-labeled for your clients.

3

Daily Collection

We pull your Meraki data every 24 hours — config snapshots, events, inventory — and version every change.

4

Monthly Delivery

On the 1st business day of each month, a branded Word report is generated, QC'd, and delivered to your inbox.

Read-Only API Access — We Never Touch Your Network

My Meraki Report connects via a read-only Meraki API key. We pull data — configuration, events, inventory — but we never write to your client's network, never modify settings, and never store credentials beyond what's needed to generate the report. Your clients' networks stay exactly as their engineers left them.

HOW WE STACK UP

The Only Solution That Delivers a Complete Branded Deliverable

Alternatives monitor networks or capture config posture — but none produce a branded, client-ready Word report with a full change audit log and IDS/IPS events. That gap is what My Meraki Report fills.

Capability	My Meraki Report \$150/org/mo	Cisco Meraki Insight \$30– \$100/network/mo	Auvik \$15– \$27/device/mo	Liongard \$29– \$39/env/mo	Native Dashboard Included

Monthly automated report	✓	✗	✗	~	✗
Change audit (who/before/after)	✓	✗	✗	~	✗
IDS/IPS event summary	✓	~	✗	✗	~
AMP malware event log	✓	~	✗	✗	~
Firewall + VPN + DHCP snapshot	✓	✓	~	✓	✓
VLAN + SSID + S2S VPN config	✓	✓	~	✓	✓
Per-device inventory + firmware	✓	✓	✓	✓	✓
On-demand + weekly reports	✓	✗	✗	✗	✗
Meraki-only pricing model	\$150/org/mo	\$30–\$100 per network, not org	\$15–\$27 per device, not org	\$29–\$39 config posture only	Free PDF only, no branding

✓ Full capability · ~ Partial · ✗ Not available | Cisco Meraki Insight provides real-time WAN/app analytics but produces no client-facing deliverable and has no change audit. Auvik and Domotz are network monitoring tools — Meraki is one of many vendors they support, and neither produces a Word report. Liongard captures config posture but not security events, and does not generate a branded document. Native Meraki Dashboard exports are PDF-only, unbranded, and require manual assembly into a client report.

SIMPLE, TRANSPARENT PRICING

One Price. Every Feature. Per Meraki Org, Per Month.

No tiers. No feature gating. No per-device math. \$150 per Meraki organization per month gets you everything — from the monthly branded report to the change audit log and on-demand delivery. Volume pricing available for 25+ orgs.

BUILT BY MSP VETERANS

Your Clients Deserve Better Than a PDF From the Meraki Dashboard

Technijian has managed Cisco Meraki environments for MSP clients since 2010. My Meraki Report was built out of frustration with manual reporting — the same frustration your team faces every month. We built the tool we wished existed.

MSP-Native Architecture

Built from day one to support multi-org MSP workflows. Manage all your Meraki client orgs from a single dashboard — add new orgs in under 15 minutes, no per-device configuration required.

Read-Only. Always.

My Meraki Report uses a read-only Meraki API key. We never write to your client's network, never modify any settings, and never store credentials beyond what's needed to pull report data.

Your Brand, Not Ours

Upload your logo and brand colors once. Every report delivered to your clients carries your MSP's brand — not Technijian's. Your clients see your professionalism, not a third-party tool.

Scales with Your Revenue

Per-org pricing means your cost scales linearly with your client base — and so does your savings. Every new Meraki org you onboard saves you 4 hours of engineer time at \$150/mo.

US

U.S.-Based Support

Technijian's support team is based in Irvine, CA. If a report has an issue, you reach a real engineer — not a chatbot. We stand behind every report we deliver.

Compliance-Ready

The change audit log and config snapshots give your compliance-minded clients the documentation trail they need for HIPAA, SOC 2, and PCI evidence reviews — without any additional configuration.

Start Your Free Trial Today

Connect your first Meraki org in under 15 minutes.
Your first branded monthly report is on us — no credit card required.
