

IPS · ATP · WEB FILTER · TRAFFIC ANALYTICS · DELIVERED MONTHLY

My Sophos Report

Every hour, your Sophos firewalls generate thousands of signals — intrusion attempts, malware callbacks, web policy violations, and network anomalies. Most MSPs see a fraction of it. We pull every IPS signature hit, ATP callback, and VPN event directly from your firewall, classify it, route billable tickets automatically, and deliver a plain-English monthly report on the 1st. You stop firefighting. You start billing.

WHY MSPS NEED THIS

Sophos Central Has the Data. Your Clients Never See It.

Your firewalls generate thousands of signals every day — IPS blocks, ATP callbacks, web violations, VPN events.

Most of it never reaches your client. My Sophos Report changes every workflow below.

IPS/IDS events invisible

✗ Buried in the firewall log viewer — no one looks, no one reports, no client ever knows.

✓ Pulled hourly from the XGS log engine. Top signatures in every Advanced report with CVE references and MITRE mapping.

Open alerts going unnoticed

✗ Alerts sit in Central for days or weeks. No ticket. No billable work. Client calls when it breaks.

✓ Every alert detected hourly. CP ticket created automatically — billable to client contract within 60 minutes.

Malware callbacks unreported

✗ ATP fires for a host phoning home to a C2 server. Nobody investigates. Host stays compromised.

✓ ATP events listed by internal host, destination, threat name, and action. Unresolved callbacks flagged P1.

Web filter violations unmeasured

✗ Client asks "is policy working?" — you have no answer without manually mining the Central log viewer.

✓ Top blocked categories, per-user violation counts, policy exceptions, and Shadow IT app detections every month.

No proactive firewall billing

✗ 2–4 billable incidents per client per month go unlogged. Industry benchmark: \$1,500+/mo per 10 tenants missed.

✓ Automatic ticket creation recovers missed billing. 10 tenants → \$1,500 recovered in month 1 (conservative).

Traffic anomalies missed

✗ Top talkers and bandwidth spikes discovered only when the client complains or the ISP calls.

✓ Top hosts by outbound bandwidth, unusual internal traffic patterns, and protocol anomalies flagged monthly.

12 SECTIONS. ONE BRANDED WORD DOCUMENT.

Sections 1–6: Foundation & Threat Intelligence

Sections 1–3 and 9–12 run on the Sophos Central Partner API (all tiers). Sections 4–8 require the XGS device-side REST API (Advanced and Enterprise). Sections are auto-omitted — not shown as blank — when the data source is unavailable.

1

Executive Summary

KPI strip — firewalls, open alerts, IPS blocks, ATP hits, web violations, VPN tunnels, firmware compliance %. Month-over-month indicators and plain-English status narrative. Top-priority callout box.

All tiers

2

Firewall Inventory & Health

All firewalls: model, serial, firmware vs. latest, WAN IPs, online/offline/degraded, uptime. HA pair status. Firmware out-of-date flagged P2. Unused rules (0 hits) flagged as cleanup candidates.

All tiers

3

Alert Activity

Total alerts by severity (Critical/High/Medium/Low/Info). Category breakdown. New vs. aging vs. resolved. Top 10 by severity + age with linked CP ticket numbers. Aging alerts > 7 days flagged as escalation risk.

All tiers

4

IPS / IDS Threat Intelligence

Top 10 attack signatures with CVE references, attack category (SQLi, RCE, buffer overflow), action taken. Top attacker IPs (country, hit count). Top targeted internal hosts. MITRE ATT&CK mapping. Week-over-week trend.

Advanced+ (XGS REST API)

5

ATP & Advanced Threat Protection

Malware callbacks, C2 destinations, malicious file detections — per-event detail with internal host, destination, threat name, action, and timestamp. Unresolved ATP hits flagged P1. Repeat offenders highlighted (likely compromised).

Advanced+ (XGS REST API)

6

Web Filtering & Application Control

Top 10 blocked categories by request count. Top users by blocked volume. Policy exceptions (rule overrides). Application control — Shadow IT detections (unsanctioned cloud storage, VPNs). SSL/TLS inspection coverage %.

Advanced+ (XGS REST API)

ADVANCED TIER SECTIONS

Sections 7–12: Traffic, Users, VPN & Recommendations

These sections complete the Advanced and Enterprise report — delivering SIEM-quality firewall visibility at a fraction of SIEM cost. Sections 9–12 available on all tiers.

Section 7 — Network Traffic Analytics

Advanced+ · XGS REST API

- Total inbound/outbound bandwidth for the month
- Top 10 internal hosts by outbound bandwidth (data exfiltration signal)
- Top 10 external destinations by connection count and bandwidth
- Daily bandwidth graph — spikes and anomalous patterns called out
- Internal traffic anomalies: unusual ports or subnets (lateral movement signal)

Section 8 — User Security Activity

Advanced+ · XGS REST API

- Per-user threat summary: IPS events, ATP detections, web filter blocks per user
- Admin authentication events: successful/failed logins, source IP, method
- Remote access VPN users: sessions, bytes transferred, auth failures, unusual countries
- Privileged action audit: firewall config changes — what changed, who, when

Section 9 — VPN & Remote Access

All tiers · Central API + XGS REST (Advanced+)

- Site-to-site VPN tunnels: status, uptime %, bytes transferred, downtime events
- Remote access VPN: unique users, peak concurrent, auth failures, unusual source countries
- SD-WAN failover events, automatic failback confirmed (Advanced+)
- VPN certificates expiring in next 90 days flagged as P3 action item

Sections 10–12 — Activity, Findings, About

All tiers

- **Section 10:** CP tickets opened this month, alerts resolved, firmware updates applied, config changes from audit log
- **Section 11:** P1/P2/P3 action list — unresolved ATP hits, IPS volume trending up, firmware drift, VPN instability — with remediation effort estimates
- **Section 12:** Data sources, API access method, scope note (firewall only — endpoint covered by Huntress), tenant ID + firewall serials

P1 findings include: active ATP hit on internal host · Critical alert open >48h · WAN failover still active at month-end · admin brute force detected · outbound C2 callback

SETUP IN 1-3 BUSINESS DAYS

Two API Paths. Both Read-Only. Both Secure.

Essentials uses only the Sophos Central Partner API — no firewall configuration needed. Advanced/Enterprise additionally uses the XGS device-side REST API for full on-box log access.

Essentials Tier — Sophos Central Partner API Only

- Sophos Central Partner credentials** — OAuth2 client ID + secret from Partner Settings → API Credentials. Read-only scope. 5 minutes to generate.
- Branding assets** — logo (PNG, min 600px wide) and hex color codes for the Word template.

Advanced / Enterprise — Adds XGS Device-Side REST API

- XGS REST API enabled** — Administration → Device Access → Local Service ACL → enable HTTPS API. System → Administration → enable REST API. Supported on XGS firmware v18+.
- Dedicated read-only API user** — create a separate admin account on each XGS restricted to Technijian's public IP range (/32 block). We provide the IP list after onboarding.
- Network access to port 4444** — Technijian infrastructure reaches `https://<firewall>:4444/` via S2S VPN (recommended) or management port restricted to our IP range.

XGS REST API — Key Endpoints (read-only)

IPS events	GET /api/v1/monitor/ips
ATP / malware callbacks	GET /api/v1/monitor/atp
Web filter logs	GET /api/v1/monitor/webfilter
Traffic analytics	GET /api/v1/monitor/interface
VPN tunnels	GET /api/v1/monitor/ipsec
Admin audit log	GET /api/v1/monitor/admin

Read-Only. Always.

We never push configuration changes, acknowledge alerts on your behalf, or modify any firewall settings. All API calls are GET-only. Bearer tokens have a 30-minute TTL and are refreshed automatically by the pull script.

Network Access Options (Advanced+)

Recommended **S2S VPN:** Permanent IPsec or SSL VPN tunnel from Technijian DC to client site — already configured for most managed clients.

Alternative **Management port restricted:** HTTPS management on port 4444 restricted to Technijian /32 IP block only. Acceptable for clients without S2S VPN.

Delivery & Operations

Alert detection	Hourly (Central API)
XGS data pull	Every 4 hours
Report delivery	1st of month, 9 AM
Format	Microsoft Word (.docx)
Setup time	Ess: 1 day · Adv: 2-3 days
Data residency	US · not retained post-report

HOW WE STACK UP

SIEM-Quality Firewall Visibility. Without the SIEM Price Tag.

Sophos Central has the data. Auvik monitors the network. Perch gives you SIEM correlation. None of them produce a branded, client-ready Word report with automatic billable ticket creation on every alert — at under \$200/month per site.

Capability	Essentials \$99	Advanced \$199	Sophos Central	Perch SIEM	Auvik
Branded DOCX client deliverable	✓	✓	✗	✗	✗
Auto CP ticket on every alert	✓	✓	✗	✗	✗
IPS per-signature event detail	—	✓	~	✓	✗
ATP / malware callback detail	—	✓	~	✓	✗
Web filter category analytics	—	✓	~	✗	✗
Network traffic analytics	—	✓	~	~	✓
Per-user threat activity	—	✓	~	~	✗
Automated monthly delivery	✓	✓	✗	✗	✗
Bundle with M365 / Meraki	✓	✓	✗	✗	✗
Public per-tenant pricing	\$99/mo	\$199/mo	Free (included)	~\$300-\$800/site	~\$29+/device

✓ Full · ~ Partial / raw data · — Not in this tier · ✗ Not available

Sophos Central provides raw data in the dashboard — but generates no client-ready deliverable, creates no tickets, and requires manual export for every report. Perch SIEM provides IPS/ATP correlation but at \$300-\$800/site with no DOCX output and no automated delivery. Auvik excels at multi-vendor network monitoring but is device-priced with no threat analytics. My Sophos Report Advanced at \$199 delivers equivalent per-firewall visibility as a branded monthly Word report — with automatic ticketing included.

vs. Sophos Central

Central provides raw logs and a dashboard — but zero deliverables, zero ticketing, and zero automation. My Sophos Report turns that same API data into a branded Word document delivered on the 1st, with every alert already converted to a billable CP ticket.

vs. Perch SIEM

Perch delivers SIEM-quality IPS/ATP correlation but costs \$300-\$800/site with no DOCX output and no automated monthly delivery. Advanced at \$199/mo gives MSPs equivalent per-firewall threat visibility packaged as a client-ready deliverable.

vs. Auvik

Auvik is the right tool for multi-vendor infrastructure monitoring. My Sophos Report is purpose-built for Sophos XGS firewall security reporting — with threat intelligence, per-user activity, and monthly deliverables Auvik doesn't produce.

SIMPLE PER-TENANT PRICING

Priced by API Depth & Firewall Count. Not by Device, Not by User.

One price per Sophos Central tenant per month. HA pairs count as one. Tier based on active firewalls at last day of prior month. Annual saves 17% across all tiers.

ESSENTIALS

Central API · 1-5 FW

\$99/mo

\$990/yr — save 17%

- ✓ All 12 report sections (API-available data)
- ✓ Hourly alert detection + auto CP ticket
- ✓ Alert aging tracker + 24h escalation
- ✓ Firewall inventory + firmware compliance
- ✓ WAN / VPN connectivity events
- ✓ Monthly delivery (1st of month)
- ✓ 12-month report archive

ADVANCED

Central + XGS REST · 1-5 FW

\$199/mo

\$1,990/yr — save 17%

- ✓ Everything in Essentials
- ✓ IPS/IDS per-signature events + MITRE mapping
- ✓ ATP malware callbacks + C2 detection
- ✓ Web filter category analytics + Shadow IT
- ✓ Network traffic analytics + top talkers
- ✓ Per-user threat + traffic activity
- ✓ HA pair monitoring + failover log
- ✓ On-demand report generation

★ MOST POPULAR

ENTERPRISE

Central + XGS REST · 6+ FW

\$299/mo

\$2,990/yr — save 17%

- ✓ Everything in Advanced
- ✓ Multi-site WAN topology map
- ✓ API export (JSON)
- ✓ Custom alert routing rules
- ✓ SLA: report delivery by 1st 9 AM
- ✓ Dedicated customer success contact

ROI Calculator10 Essentials tenants **\$135/mo saved**20 Advanced tenants **\$570/mo saved**Recovered billing (10 tenants) **\$1,500 month 1**Advanced vs. SIEM per site **38-75% less**

Labor savings based on 1.5h/tenant (Essentials) or 2.5h/tenant (Advanced) at \$75/hr. Recovered billing from 2 missed incidents/client at \$75 each. SIEM comparison: Perch/Arctic Wolf at \$300-\$800/site.

Bundle & Save

- ♦ + My Meraki Report (\$150/org) → **10% save**
- ♦ + My M365 Report (\$15-\$129/tenant) → **10% save**
- ♦ All three services together → **save 15%**

Example: 30 users + Sophos Advanced + Meraki
\$49+\$199+\$150 = \$398 → Bundle: **\$338/mo**

YOUR REPORTING PARTNER

Built for MSPs by a Sophos Gold Partner.

We built My Sophos Report for our own MSP operations before making it available to other partners. Every workflow — alert detection, ticket creation, report generation — runs against the same APIs you have access to.

**Direct Firewall Access**

Advanced tier reads the XGS on-box log engine directly — the same log database as the local log viewer. You get every IPS hit and ATP event before Sophos aggregates or suppresses it.

**Read-Only. Always.**

All API calls are GET-only. We never push config changes, acknowledge alerts on your behalf, or modify any firewall settings. Your environment stays entirely under your control.

**Alerts in Under 60 Minutes**

Central Partner API is polled hourly. New alert = CP ticket created within 60 minutes, billable against the client's contract, assigned to your support team with correct priority.

**Your Brand, Your Report**

Every report carries your company logo and colors. There is no Technijian attribution in the client deliverable. The report is entirely your managed firewall service.

**SIEM Value. Not SIEM Cost.**

Advanced at \$199/site gives equivalent firewall-layer visibility to Perch or Arctic Wolf at \$300–\$800/site. Compelling cost justification for clients who've been told they "need a SIEM."

**Full Stack Available**

Bundle with My M365 Report and My Meraki Report for complete managed reporting — network, firewall, and cloud productivity — with 10–15% bundle discounts.
