

CUSTOM SOFTWARE & AI-DRIVEN DEVELOPMENT

My Dev

Software Development. Reimagined with AI. Custom applications, API integrations, and modernization delivered 3-5× faster via our SDLC v7.0 Claude Code-native methodology.

PLATFORM

The Development Challenge

Most organizations struggle to ship custom software fast enough. Senior talent is scarce, legacy dev shops haven't adapted to AI, and integrations sprawl into tech debt.

Dev Talent Scarcity

Senior engineers are expensive and hard to hire. In-house teams burn out on maintenance cycles and miss modernization windows.

→ Augment or replace with AI-accelerated delivery

AI-Ignorant Dev Shops

Most dev shops haven't reworked their methodology around AI assistants. You're paying for 2020 productivity at 2026 rates.

→ SDLC v7.0 Claude Code-native methodology

Integration Hell

Legacy systems, modern SaaS, and custom apps don't talk to each other. Data lives in silos; workflows die at every seam.

→ API-first design with MCP & custom middleware

Architecture Drift

Projects start clean but accumulate tech debt. No one owns long-term architecture health, and rewrites arrive far too late.

→ Owned architecture with managed application services

Why My Dev Now?

- ▶ AI coding tools deliver 3-5× speedup for experienced engineers — shops without them are already obsolete
- ▶ Multi-agent orchestration is enabling entirely new categories of software that weren't previously economical
- ▶ Enterprise software buyers now demand AI features — every product roadmap is being rewritten this year
- ▶ Custom apps beat SaaS for regulated data and differentiated workflows — build beats buy when stakes are high

Development **Services**

Full-lifecycle custom software delivery — from greenfield apps to legacy modernization — built on an AI-native methodology that ships faster with better architecture.

Custom Application Development

- ✓ Full-stack web applications & portals
- ✓ Internal tools & employee-facing apps
- ✓ B2B platforms & partner portals
- ✓ Multi-tenant SaaS architectures
- ✓ Cross-platform mobile (iOS / Android)
- ✓ API-first backends & microservices

AI-Driven Development (SDLC v7.0)

- ✓ Claude Code-native development methodology
- ✓ Multi-agent orchestration for parallel delivery
- ✓ AI-first TDD & spec-to-code workflows
- ✓ Figma Make integration for design-to-code
- ✓ AI-augmented code review & quality gates
- ✓ 3-5× faster than traditional dev shops

Integrations & APIs

- ✓ REST & GraphQL API design & delivery
- ✓ ERP integrations: Epicor, SAP, NetSuite
- ✓ CRM integrations: Salesforce, Dynamics, HubSpot
- ✓ Microsoft Graph, Teams, SharePoint connectors
- ✓ ServiceNow, Jira & workflow platforms
- ✓ Custom MCP servers for AI tool integration

Modernization & Maintenance

- ✓ Legacy app modernization & cloud rewrites
- ✓ Classic ASP / WebForms → React + .NET 8
- ✓ Monolith decomposition & service extraction
- ✓ Tech debt paydown & architecture refactoring
- ✓ Application managed services & 24/7 support
- ✓ Performance tuning & observability upgrades

How We Engage

1

Discover

Requirements & architecture assessment

2

Design

Spec, prototypes & technical design

3

Build

AI-accelerated development & delivery

4

Operate

Managed application support & evolution

Representative Use Cases

Generic profiles of the custom software engagements My Dev delivers — from greenfield platforms to legacy modernization and AI-augmented features embedded in existing products.

AI-ACCELERATED BUILD

AI-Assisted Platform Build

Multi-tenant SaaS platform delivered using Claude Code SDLC v7.0 — React frontend, .NET 8 API-first backend, multi-agent orchestration for parallel feature streams, 3-5× faster than traditional dev.

3-5×

Faster delivery

SDLC v7

AI-native

ERP INTEGRATION

ERP Integration Project

Custom middleware integrating Epicor / SAP / NetSuite with a modern CRM and reporting stack — eliminating manual re-keying, reconciling inventory and financials in near real-time across systems.

Real-time

Data sync

Zero

Re-keying

INTERNAL TOOLS

Internal Tool Portal

Employee-facing internal portal replacing 12 legacy spreadsheets and an ad-hoc access-request process — role-based dashboards, approvals, audit trails, and SSO integration with Microsoft 365.

12→1

Spreadsheets

SSO

Enterprise

LEGACY MODERNIZATION

Legacy Modernization

20-year-old Classic ASP line-of-business application rewritten in React + .NET 8 API-first architecture — same business rules, modern UI, cloud-ready deployment, and a decade of new life.

React

+ .NET 8

API-first

Cloud-ready

AI FEATURE EMBED

Custom AI Feature in Existing App

LLM-powered search, summarization, and decision-support embedded in a customer-facing product — shipped as a retrofit that keeps the existing stack intact while adding 2026-grade intelligence.

LLM

Embedded

Engagement Models

Flexible arrangements designed to meet you where you are — from fixed-scope delivery to embedded staff augmentation and long-term managed application services.

Fixed-Scope Project

Defined scope, deliverables, timeline, and outcomes. Pay for a finished product, not hours logged.

- ✓ Scoped greenfield applications
- ✓ Integration & middleware projects
- ✓ Legacy modernization rewrites
- ✓ AI feature add-ons to existing apps

Best for: Well-defined scope with clear success criteria

Time & Materials (T&M)

Flexible hourly or daily engagement when scope is evolving and speed to value matters more than a fixed bid.

- ✓ Rapid prototyping & discovery builds
- ✓ Iterative product development
- ✓ Ongoing feature delivery sprints
- ✓ AI-experimentation & research work

Best for: Evolving scope or AI-first exploration

Staff Augmentation

Senior engineers & AI-native developers embedded directly in your team, reporting to your engineering leadership.

- ✓ Senior full-stack engineers
- ✓ Claude Code-trained AI developers
- ✓ Integration & API specialists
- ✓ Architecture & platform leads

Best for: In-house teams needing AI-native capacity

Managed Application Services

Post-launch retained engagement for ongoing maintenance, enhancements, and architecture ownership.

- ✓ Bug triage & production support
- ✓ Continuous feature delivery
- ✓ Security patching & compliance upkeep
- ✓ Architecture health & tech debt paydown

Best for: Long-lived apps needing owned evolution

About Technijian & SDLC v7.0

Technijian has been building custom software since 2000 and pioneered SDLC v7.0 — an AI-native development methodology integrating Claude Code, Figma Make, GitHub, and multi-agent orchestration. We ship 3-5× faster than traditional dev shops with better architecture, fewer bugs, and AI-augmented quality gates — all delivered from a 100% U.S.-based team headquartered in Irvine, California.

Custom Software. AI-Native Development.
