The M365 Challenge

Most organizations live inside Microsoft 365 — but no one owns governance, licensing, security, or Copilot readiness. The platform is powerful, but the tenant is rarely tuned.

M365 Sprawl

Your org grew on M365 but no one owns governance. Unused licenses waste money. Over-permissioned sites leak data. Teams and SharePoint multiplied without structure.

→ [Governance & license optimization](#)

Migration Stuck

Legacy email or file-server migrations to Microsoft 365 stall because no one has the time or expertise to finish the cutover. Pilots never become production.

→ [Turnkey migration to M365 cloud](#)

Security & Compliance Gaps

M365 ships with enterprise security features, but most tenants never enable them. MFA, Conditional Access, DLP, sensitivity labels, retention — all unconfigured.

→ [Tenant hardening & Zero Trust](#)

Copilot Readiness

Microsoft Copilot requires clean data, tight permissions, and the right licensing. Without prep, Copilot amplifies bad data and surfaces content the wrong people can see.

→ [Copilot readiness & governance](#)

Why My Office Now?

- ▶ Microsoft Copilot is changing the productivity landscape — organizations that prepare now will compound AI productivity gains
- ▶ Hybrid and remote work require a modern M365 foundation: Teams, OneDrive, SharePoint Online, and intranet-as-a-service
- ▶ Conditional Access and Zero Trust are now baseline expectations for cyber insurance, audits, and compliance frameworks
- ▶ Right-sized E3/E5 licensing and add-on rationalization commonly saves 20-30% on annual Microsoft 365 spend

M365 Service Pillars

Four practice areas covering the full Microsoft 365 stack — from migration and deployment through SharePoint, security, and Copilot enablement.

M365 Migration & Deployment

- ✓ Exchange / Gmail / legacy mail → M365
- ✓ OneDrive rollout & file-server retirement
- ✓ Teams adoption & channel architecture
- ✓ SharePoint & intranet rollout
- ✓ Tenant provisioning & hardening
- ✓ Change management & end-user comms

Intranet & SharePoint

- ✓ Modern SharePoint intranet sites
- ✓ Document management & metadata
- ✓ Power Automate workflows & approvals
- ✓ Enterprise search & knowledge discovery
- ✓ Governance templates & site lifecycle
- ✓ Departmental portals & communication hubs

M365 Security & Compliance

- ✓ MFA & Conditional Access rollout
- ✓ DLP, sensitivity labels & retention
- ✓ Audit log, Defender for M365, eDiscovery
- ✓ Purview compliance & records management
- ✓ Guest access & external sharing controls
- ✓ Incident response & alert tuning

Microsoft Copilot (My Copilot)

- ✓ Copilot readiness assessment
- ✓ License design & E3/E5 optimization
- ✓ Permission cleanup & data exposure audit
- ✓ Pilot design & champion program
- ✓ User training & prompt playbooks
- ✓ Governance, monitoring & policy guardrails

How We Engage

1

Assess

Tenant, licensing & security baseline

2

Design

Target architecture, policies & rollout plan

3

Migrate

Execute cutover, deploy & secure the tenant

4

Operate

Manage, train users & enable Copilot

M365 Use Cases

Common scenarios we deliver for mid-market organizations moving to a modern, secure, Copilot-ready Microsoft 365 environment.

EMAIL & CALENDAR MIGRATION

Legacy Email Migration to Microsoft 365

On-prem Exchange or Google Workspace migrated to Microsoft 365 with zero downtime. Full mailbox, calendar, contact, and rule preservation — plus MFA and Conditional Access enabled on day one.

Zero

Downtime

100%

Mailboxes

SHAREPOINT INTRANET

Intranet Modernization & Knowledge Hub

Modern SharePoint intranet with enterprise search, policies, and departmental portals. Retires legacy file shares and ad-hoc Teams sprawl with a governed, branded, search-first employee experience.

Search

First

COPILOT PILOT

50-User Microsoft Copilot Pilot

90-day Copilot pilot covering license selection, permission prep, pilot group design, user training, and governance rollout. Exits with adoption metrics and a clear go/no-go for broader deployment.

TENANT HARDENING

Security Hardening of Existing M365 Tenant

MFA, Conditional Access, DLP, sensitivity labels, retention policies, external sharing controls, and Defender for M365 tuned to a defensible, insurance-ready baseline — without disrupting end users.

TEAMS VOICE

Teams Phone (Direct Routing)

Microsoft Teams deployed as the corporate phone system with SBC integration and Direct Routing. Retires legacy PBX, consolidates voice + chat + video, and lowers per-user communications cost.

Engagement Models

Four ways to engage My Office — from a discrete assessment through a fully managed M365 tenant.

M365 Readiness Assessment

Fixed-fee tenant review: licensing, security baseline, data posture, and Copilot readiness scorecard.

- ✓ License utilization & right-sizing
- ✓ Security & Conditional Access review
- ✓ SharePoint / OneDrive exposure scan
- ✓ Copilot readiness scorecard

Best for: Knowing where you stand before investing

Migration Project

Fixed-scope project with defined cutover plan, timeline, and success criteria. Pay for outcomes, not hours.

- ✓ Email / mailbox & calendar migration
- ✓ File-server → OneDrive / SharePoint
- ✓ Intranet or Teams Phone rollout
- ✓ Communications & user enablement

Best for: A defined cutover you need to finish

Managed M365 (Monthly)

Monthly managed service covering tenant administration, help desk, security posture, and change management.

- ✓ 24/7 U.S.-based help desk
- ✓ Tenant administration & patching
- ✓ Security monitoring & alert triage
- ✓ User onboarding / offboarding

Best for: Running M365 without hiring M365 staff

Copilot Pilot (90-Day)

Packaged 90-day Copilot engagement from license design through pilot wrap-up with adoption and ROI metrics.

- ✓ License design & governance setup
- ✓ Permission & data exposure cleanup
- ✓ Pilot cohort, training & champions
- ✓ Adoption metrics & go/no-go readout

Best for: Proving Copilot value before scaling
