

EXECUTIVE SUMMARY

Alexandria House

AI Growth Blueprint — raise more, win more grants, reach more families, recover staff time

Prepared for Alexandria House · June 16, 2026 · Confidential

1996Founded · Sister Judy Vaughan,
CSJ**315**Children served since 1996
(org-reported)**~83%**Revenue from contributions
(FY2024)**>92%**Families retained in housing
(org-reported)**First — this is not about replacing your network team**

You told us you already have your network team in place. Keep them. This is not a managed-IT proposal. It is about using AI to raise more money, win more grants, reach families in Spanish as well as English, and return staff time to the mission — work your IT team does not do, and where a small, donation-funded organization gains the most.

Since 1996, Alexandria House has been a transitional residence and house of hospitality for women and children moving out of homelessness in central Los Angeles, surrounding families with a "Circle of Support" across housing, economic opportunity, food, child care, wellness, and lifelong alumni support. This summary shows where AI creates measurable value — and states only verified facts, attributing what the organization reports about itself and deferring company-specific numbers to discovery.

Grow support. AI helps research and draft grants, find and re-engage donors, and personalize bilingual appeals — so staff spend scarce hours on the relationships and arguments that win gifts. **Reach and serve better.** A Spanish-language website your families can actually read, automated impact and funder reporting, and a volunteer chatbot for routine questions. The rule never changes: AI drafts and researches; a person verifies every claim and owns every relationship.

What we verified

- **A trusted, established mission:** founded 1996 by Sister Judy Vaughan, CSJ; 501(c)(3) (EIN 95-4809755); led by ED Marissa Espinoza since July 2022; permanent affordable housing across a 16-unit and a 39-unit building.
- **Donation-dependent and under pressure:** about 83% of FY2024 revenue was contributions and grants, and the organization spent more than it took in for the year while scaling the 39-unit building — as HUD suspended federal homelessness funds through the regional agency in June 2026.
- **Capable, not lost:** a solid all-in-one platform, a ~15,000-follower Instagram, modern event fundraising, and a Charity Navigator rating — a strong base to build on.
- **The clearest gap is the wedge:** an English-only website in a heavily Latino and Korean neighborhood, with strong outcomes (the 92%) invisible to search and AI assistants — fixable, and the best place to start.

A few corrections we made for accuracy

We discarded all figures belonging to a separate Minnesota organization (Alexandra House, Inc.), confirmed the founder's order as the Sisters of St. Joseph of Carondelet, and set aside one outsized single-year revenue figure in a public database that appears to be a data artifact. That is the standard of evidence behind every figure here.

The engine

Three columns — be found and tell the story, raise more and win grants, and serve families and report impact — each delivered by a specific Technijian service, and much of the enabling technology free or granted to nonprofits.

Alexandria House AI Growth Engine

Be found and tell the story (left); raise more and win grants (center); serve families and report impact (right).

* My SEO · My AI · My Dev. AI drafts and researches; a human verifies every claim and owns every donor and family relationship. No client data goes into public AI tools.

Investment & the path forward

Affordable by design, no invented numbers. We lean first on free and granted nonprofit technology — including up to \$10,000 a month in free Google search ads and free Google Workspace — price the rest from real published ranges, and model returns only after discovery, in dollars raised and hours recovered rather than a revenue multiple. The path is start-small: prove one automation and a Spanish page, then grow as each step proves out.

The easiest first step is a short working session on where AI creates measurable value for Alexandria House — no obligation. The full blueprint ends with a structured questionnaire, "Questions to Complete the Analysis," that turns this summary into a costed, calibrated plan scoped to your budget and grant cycles.
